Project Description: Technology Inventory System

This is a purchase for a system to allow for comprehensive inventorying of all classroom technology. We have never had such a system and as our internal tech has increased almost 10 fold in the last 10 years, keeping track of it has been a terrible struggle. This system is a plug in for our existing library system so the architecture is familiar and we have a baked-in set of folks who know how to use and navigate it.

Especially with the influx of classroom chromebook sets, it is important we have a way to make sure each teacher knows what classroom equipment s/he is expected to start and end the year with and it helps the IT Dept to know what items need to be replaced or upgraded. It will also allow us to more easily look at what age tech is where so we are ensuring that we are dispersing technology equitably across the district.

Pricing:

Cost is ~12k for the first year implementation cost and then ~6k a year after that. (Tech/General Fund)
