*RE: Wetland Delineation and Jurisdictional Assessment with GPS Survey  
5010 West Vienna Road, Clio (Parcel IDs 18-17-400-035 & -038)  
Vienna Township, Genesee County, Michigan  
ASTI File No. A25-1782.00*

Erin McMachen:

On October 23, 2025, ASTI Environmental (ASTI) conducted a site investigation to delineate wetland boundaries within the above-referenced property in Vienna Township, Genesee County, Michigan (Subject Property). One watercourse and one wetland likely regulated by the Michigan Department of Environment, Great Lakes, and Energy (EGLE) were found within the Subject Property (Figure 1 – *GPS-Surveyed Wetland Boundaries*). Wetland boundaries, as depicted on Figure 1, were located using a professional grade, hand-held Global Positioning System unit (GPS).

#### **SUPPORTING DATA AND MAPPING**

The USDA Web Soil Survey (WSS), the National Wetland Inventory Map (NWI), EGLE Wetlands Map Viewer web site, and digital aerial photographs were all used to support the wetland delineation and subsequent regulatory status determination. The EGLE maps indicated the presence of wetland within the western portion of the Subject Property.

In addition, the WSS indicated the Subject Property is composed of the soils Cohoctah silt loam, Kibbie fine sandy loam (0-2% slopes), and Pinconning-Allendale loamy fine sands (0-2% slopes). The soil complexes of Cohoctah silt loam and Pinconning-Allendale loamy fine sands are listed as hydric by the WSS.

## FINDINGS

ASTI investigated the Subject Property for the presence of any lakes, ponds, wetlands, and watercourses. This work is based on *MCL 324 Part 301 (Inland Lakes and Streams)* and *Part 303 (Wetland Protection)*. In some circumstances the US Army Corps of Engineers (USACE) may also have jurisdiction of wetlands or watercourses; this is not the case with your site.

The delineation protocol used by ASTI for this delineation is based on the US Army Corps of Engineers' *Wetland Delineation Manual*, 1987, the *Regional Supplement to the Corps of Engineer Wetland Delineation Manual Northcentral and Northeast Region*, and related guidance/documents, as appropriate. Wetland vegetation, hydrology, and soils were used to locate the wetland boundaries.

One watercourse and one wetland were found within the Subject Property, as discussed below.

### Watercourses

Parker Creek occurs in the western portion of the Subject Property. ASTI identified the ordinary high-water marks (OHWM) at a number of locations along the channel (Figure 1). It is ASTI's opinion that the creek is regulated by EGLE as a stream under Part 301, Inland Lakes and Streams given that it has defined bed, banks, and evidence of flow. It should be noted that, although on-site portions of the creek are not identified as a county drain by the online Genesee County drain maps, Parker Creek is identified as a county drain directly south of the Subject Property and any work within the watercourse or potential associated drain easements may require a permit from Genesee County. Please also note that there may be an EGLE-regulated and/or 100-year FEMA floodplain associated with the watercourse on site.

### Wetland A

Wetland A is a forested and scrub/shrub wetland located in the western portion of the Subject Property (Figure 1). Wetland A is 0.28 acre on-site and continues off-site to the west. Dominant vegetation found within Wetland A included silver maple (*Acer saccharinum*), American elm (*Ulmus americana*), green ash (*Fraxinus pennsylvanica*), late goldenrod (*Solidago gigantea*), woodland sedge (*Carex blanda*), and rue-anemone (*Thalictrum thalictroides*). Soils within Wetland A were sandy and loamy and are considered hydric because criteria for depleted matrix were met. Indicators of wetland hydrology observed within Wetland A included water-stained leaves, geomorphic position, and FAC-neutral test.

Dominant vegetation observed within the upland adjacent to Wetland A included silver maple, American elm, shagbark hickory (*Carya ovata*), basswood (*Tilia*

*americana*), black cherry (*Prunus serotina*), black raspberry (*Rubus occidentalis*), green ash, wild ginger (*Asarum canadense*), Japanese rose (*Rosa multiflora*), late goldenrod, and tall goldenrod (*Solidago altissima*). Upland soils were sandy and loamy, and no evidence of wetland hydrology was observed.

It is ASTI's opinion that Wetland A is regulated by EGLE because it is directly connected to Parker Creek, a Part 301 EGLE-regulated watercourse.

#### Wetland and Stream Flagging

Wetland and watercourse boundaries were marked in the field with day-glow pink and black striped flagging with the following flagging numbers:

Wetland A and Parker Creek:	A-1 through A-46 (includes OHWMs)
	AA-1 through AA-14 (includes OHWMs)
	A2-1 through A2-9

#### **SUMMARY**

Based upon the data, criteria, and evidence noted above, it is ASTI's professional opinion that the Subject Property includes one watercourse (Parker Creek) and one wetland (Wetland A) likely regulated by EGLE under the Natural Resources and Environmental Protection Act (1994 P.A. 451), Part 301 Inland Lakes and Streams and Part 303 Wetland Protection, respectively. However, please note that EGLE has the final authority on the extent of regulated wetlands, lakes, and streams in the State of Michigan. Any proposed impact to the areas that ASTI has identified as regulated will require a permit from EGLE prior to any wetland impacts.

Attached are Figure 1, which shows the GPS-surveyed locations of wetland flagging on the Subject Property and completed US Army Corps of Engineers (USACE) Wetland Data Forms. Please note that the data sheet numbers match the data collection sampling points shown on Figure 1.

Thank you for the opportunity to assist you with this project. Please let us know if we can be of any further assistance in moving your project forward.

Sincerely yours,

ASTI ENVIRONMENTAL
