Re: Pre Trip Inspection, Safe Routing, Parent My View

WSD Board Members,

Hello All,

I am asking for approval to purchase EVIR, My View, and Tablets for safe routing for our school buses. I received a bid from ZONAR, They are currently our GPS software. The bid came in at \$232,195.20

With this purchase, the drivers would have to do the pre-trip and post-trip with a tablet and scan specific areas on the bus before they could drive. We are the only district in Utah that is still doing pre-trip and post-trip on paper. It would be a more accurate report for the Highway Patrol and ensure our drivers are performing their duties.

The tablets would be mounted on the bus and would give the drivers and the substitutes a turn-by-turn direction of the routes, providing a safer and more accurate route, especially for the substitutes who are uncertain of where they are going.

The final piece of this proposal is My View; it would be beneficial for the parents as they could download the app, which works in conjunction with our routing software. The parents would have peace of mind knowing they could track their students at all times while on the bus. Other districts are using this, and it is a great tool that gives parents peace of mind.

I have attached a couple of flyers with more details and a copy of the bid.

I know where I could get the money if you approve the purchase.

I appreciate your consideration, and I am eager to hear your decision.

If I can provide further clarification or answer questions, please call me at 801-476-7931 or my cell phone at 801-725-4610.

Sincerely,
Kristen H. Kearl
Supervisor

Terms and Conditions:

- The above pricing is a good faith estimate issued in USD. Prices may be adjusted once a complete Asset List is provided to Zonar.
- Prices for Services are based on a three-year Service Agreement unless otherwise negotiated.
- No Hardware or Services will be provided by Zonar until Parties have executed a Service Agreement.
- Any shipment dates identified are estimates only, and are subject to change. Actual shipment dates are subject to inventory and supply availability, and will be separately confirmed by Zonar.
- Installation, Taxes, Travel and expenses and shipping costs will be additional charges.
- All Leased/Bundled Hardware must be returned to Zonar after termination of Service Agreement.
- Early termination of Service Agreement will result in early termination fees.
- Zonar's 4G converter device, to be used with Zonar V3 GPS unit, has a 2 year warranty.

Comply
with DOT, OSHA,
MSHA & PTASP

Ensure
accurate, verified
inspection reports

Reduce
risk of failures
on the road

Automate
service scheduling
& reporting

Tag, inspect, upload. It's that simple.

Ensure every inspection is done right.

Put EVIR in each driver's hands to automate and simplify pre- and post-trips inspections. And make sure each inspection is done properly—every time. Available on Zonar tablets and by downloading the app from the Google Play Store, our [electronic verified inspection reporting \(EVIR\)](#) solution is compliant with all DOT, OSHA, MSHA and PTASP regulations.

Prevent pencil whipping and lost logs.

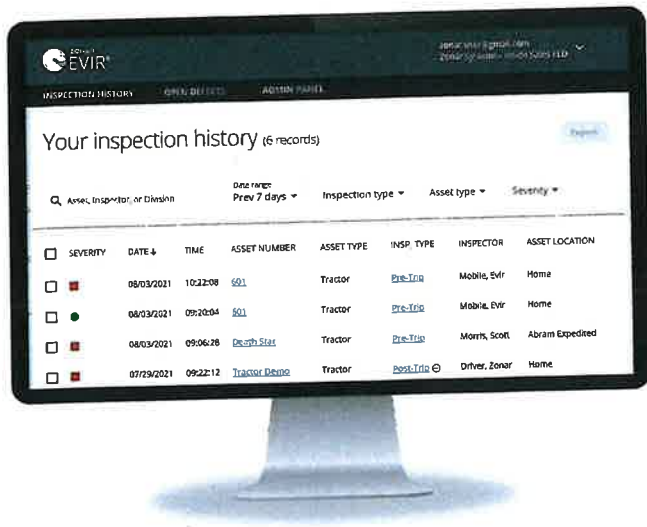

- Place a Zonar tag at each inspection zone on the vehicle.
- Drivers must physically visit each zone and scan each tag.
- Once the inspection is finished, the results are uploaded to [our secure web portal](#).

Each tag is digitally linked to that vehicle to confirm identity, and its corresponding information is loaded. Drivers can review previous inspections, complete full inspections, add photos of defects and sync to Zonar Ground Traffic Control® for anytime, anywhere access. No paperwork to track or lose.

And, each scan is timestamped, so you can see when an inspection begins, ends and how long the driver spent in each zone. If any part of an inspection was rushed, you'll know.

Streamline audit inspections.

Daily vehicle inspection records must be held for 90 days. When drivers complete an EVIR inspection, the results are automatically uploaded and digitally stored in a centralized online dashboard. Less administrative paperwork, more efficient inspection audits, fewer penalties due to lost records.

Maintain vehicle health, reduce risk of breakdowns.

Keep vehicles mechanically safe and in reliable working condition longer. Identify and address critical defects sooner.

Your fleet management team is instantly notified when a defect is found during an electronic verified inspection. Identify and address critical issues sooner instead of waiting for paper inspection forms to be submitted and routed. And schedule maintenance for minor issues ahead of time to reduce unplanned service interruptions in the shop. Drivers are notified via their Zonar tablet or mobile phone once repairs are finished so they can get the vehicle moving sooner.

Quickly access inspection data.

- View inspection history anytime, anywhere through Ground Traffic Control.
- Receive instant alerts on the online dashboard if a driver doesn't perform an inspection, or a critical defect is found.
- Easily filter for vehicles with severe open defects and prioritize them for maintenance.

Ensure rental vehicles are inspected, too.

You may not want to permanently tag temporary assets—but they still need to be inspected. Drivers can use EVIR tagless inspection option in the EVIR app to properly inspect rental and leased assets, and upload the results using the same process as your tagged assets.

Same process, same app, same secure online portal, same electronically verified inspection results.

Verify inspections, no extra hardware required.

Even if you're locked into a contract with another provider, you can download the EVIR mobile app to perform inspections. Most eDVIR devices require dongles, docks or even GPS units, making implementation complex and costly. However, the EVIR mobile app is available on the Google Play Store and can be accessed on Android compatible devices; no extra hardware necessary.

ridership

Give parents peace of mind.

Open new lines of communication.

School districts and parents care about student safety, just from slightly different perspectives. Zonar MyView brings peace of mind to both. Parents can use the MyView mobile app to see where their child's school bus is located and customize proximity-based alerts. And districts can use MyView's back-end dispatcher portal to communicate bus changes, delays or breakdowns directly to parents' phones. Even bus substitutions automatically update in the parent app, creating a seamless workflow and less headache. Easier communication, peace of mind for everyone. All without needing a routing provider.

Lighten parents' daily load.

Providing parents an easy-to-use mobile app to check on their child's school bus whenever they need means one less thing for them to worry about.

Routing provided apps' estimated times of arrival are often inaccurate. MyView uses GPS data provided by the Zonar V4 telematics control unit (TCU) to track and display that bus's location on an aerial map, powered by Google—all in near real time. Parents can create proximity-based alerts to plan complex home life accordingly.

Key features

- Real-time, map-based bus locator
- Support Assistant to answer questions
- Guaranteed parent and student information privacy
- Custom zones for each stop and facility
- Email alerts and SMS messages
- Zonar V4™ GPS tracking integration
- Available on smartphones, tablets and computers
- GPS, telematics and routing data analytics for transportation efficacy

Customize to fit complex schedules.

Parents can custom-build zones within MyView, and time their morning and afternoon schedules more efficiently by setting up SMS alerts for when the bus is approaching. This is especially helpful for not getting stuck waiting outside during inclement weather. They can also add multiple zones for different drop-off destinations such as daycare or sporting fields.

Capture ridership details for yourself.

Equip each student with a passive, Zonar-issued RFID card. They scan their card upon boarding and exiting the bus, which captures the exact time, location and bus number.

You see inside bus ridership so you can better serve students and parents. Parents can view and receive instant alerts with the details of their child getting on and off the bus. Useful insight for you, peace of mind for parents.

Reduce parent calls to the district.

Most calls to a district's dispatch come from parents. Where's the bus? Is it running late? Did we miss it? Districts can use the Zonar MyView back-end portal to set up zones around schools and seamlessly manage bus substitutions. Parents can look up the bus and receive an alert through their MyView app when the bus arrives or departs the facility, is running late, breaks down or needs to be substituted.

Dispatchers can also send messages to all parents, or certain ones associated with a specific bus or student. Either way, parents can then follow the appropriate bus or route number instead of calling the district.

Answer parents' questions effectively.

Fewer parents will call for bus locations—but what about those who call for help with MyView? Use MyView Support Assistant to view their account and answer common questions.

View basic information such as:

- username, email address, device ID and signup date
- students they follow
- push notification settings
- zones and notification history

Plus, if necessary, school administration can delete a parent account at any time.

Keep data and information airtight.

Security is priority one, especially where student information is concerned. To set up MyView, parents are required to go through a multi-step process. The school district sends them an access code to enter, parents who don't know the code need to call the district. Parents must also enter their child's unique district ID.

All parent information is locked down and password protected within the app to prevent unauthorized people from opening the app and viewing the child's bus information.
