

School Board/Superintendent Team Analysis
of
Student Achievement Data
* DRAFT 5/25/06 *

Outcomes:

1. Board members have a broad understanding of the current status of student achievement within the state and district
2. Board members can articulate what needs to change and what they think is possible for student achievement – affirm the need for improvement, the moral purpose for improving.

Board members will be able to:

1. To identify strengths, in order to support improvement.
2. To determine trends over time and whether gaps are narrowing.
3. To identify areas of needed improvement by grade level(s) and/or subject area(s) and/or subgroup(s), in order to provide the pressure and support needed for improvement.

Why data study is important:

1. Studying data helps create urgency by identifying areas of needed improvement
2. Studying data helps determine what is possible by comparing the current status of student achievement with what could be

Key Considerations:

1. Because there is always measurement error, it is important to study multiple years of data. Three to five consecutive years are recommended.
2. Because assessments vary in their strengths and limitations and because of measurement error, it is important to study data from multiple measures. Two measures of the same content area should be used, at a minimum. It is also important to use assessments of multiple formats.

Important Questions: (For board members to ask and to insure get answered.)

1. What are the important student learning expectations (standards and benchmarks) do these data focus on?

Student Achievement Data Analysis Protocol
(To be used with Data Analysis Record Form)

1. Select a content standard and grade range to study, e.g. K-3 Reading or Middle School Mathematics
2. Clearly describe the content standard and benchmarks, i.e. "What are students expected to know and be able to do?"
3. Select one assessment of the content standard, e.g. OAKS or local performance assessment.
4. Clearly describe the performance standard, i.e. define "meets"(and "exceeds") for that assessment.
5. Examine graphs of 3-5 years of proficiency data. It is best to have graphs by grade over time and also by cohorts (same group of students) over time. Record your observations. (About what percentage of the students are proficient? Is the trend toward improvement? Are certain grades or cohorts significantly better or worse than others?)
6. Examine graphs of growth over time for different sections of the distribution, e.g. quartiles. What is the trend for the lowest performing students, average students and highest performing students? Is the gap widening or narrowing?
7. Examine graphs of subgroup data over time (SWD, ethnicity, SES, ELL). Identify any gaps/differences and whether they are widening or narrowing.

4-7. Repeat steps 4-6 for a second (and third if you can) assessment of the same content standard and grade levels.

8. Conclusions. What are the major strengths and areas of needed improvement?

Sheridan School District Student Achievement Data Analysis Record
Assessment Data Observations Page

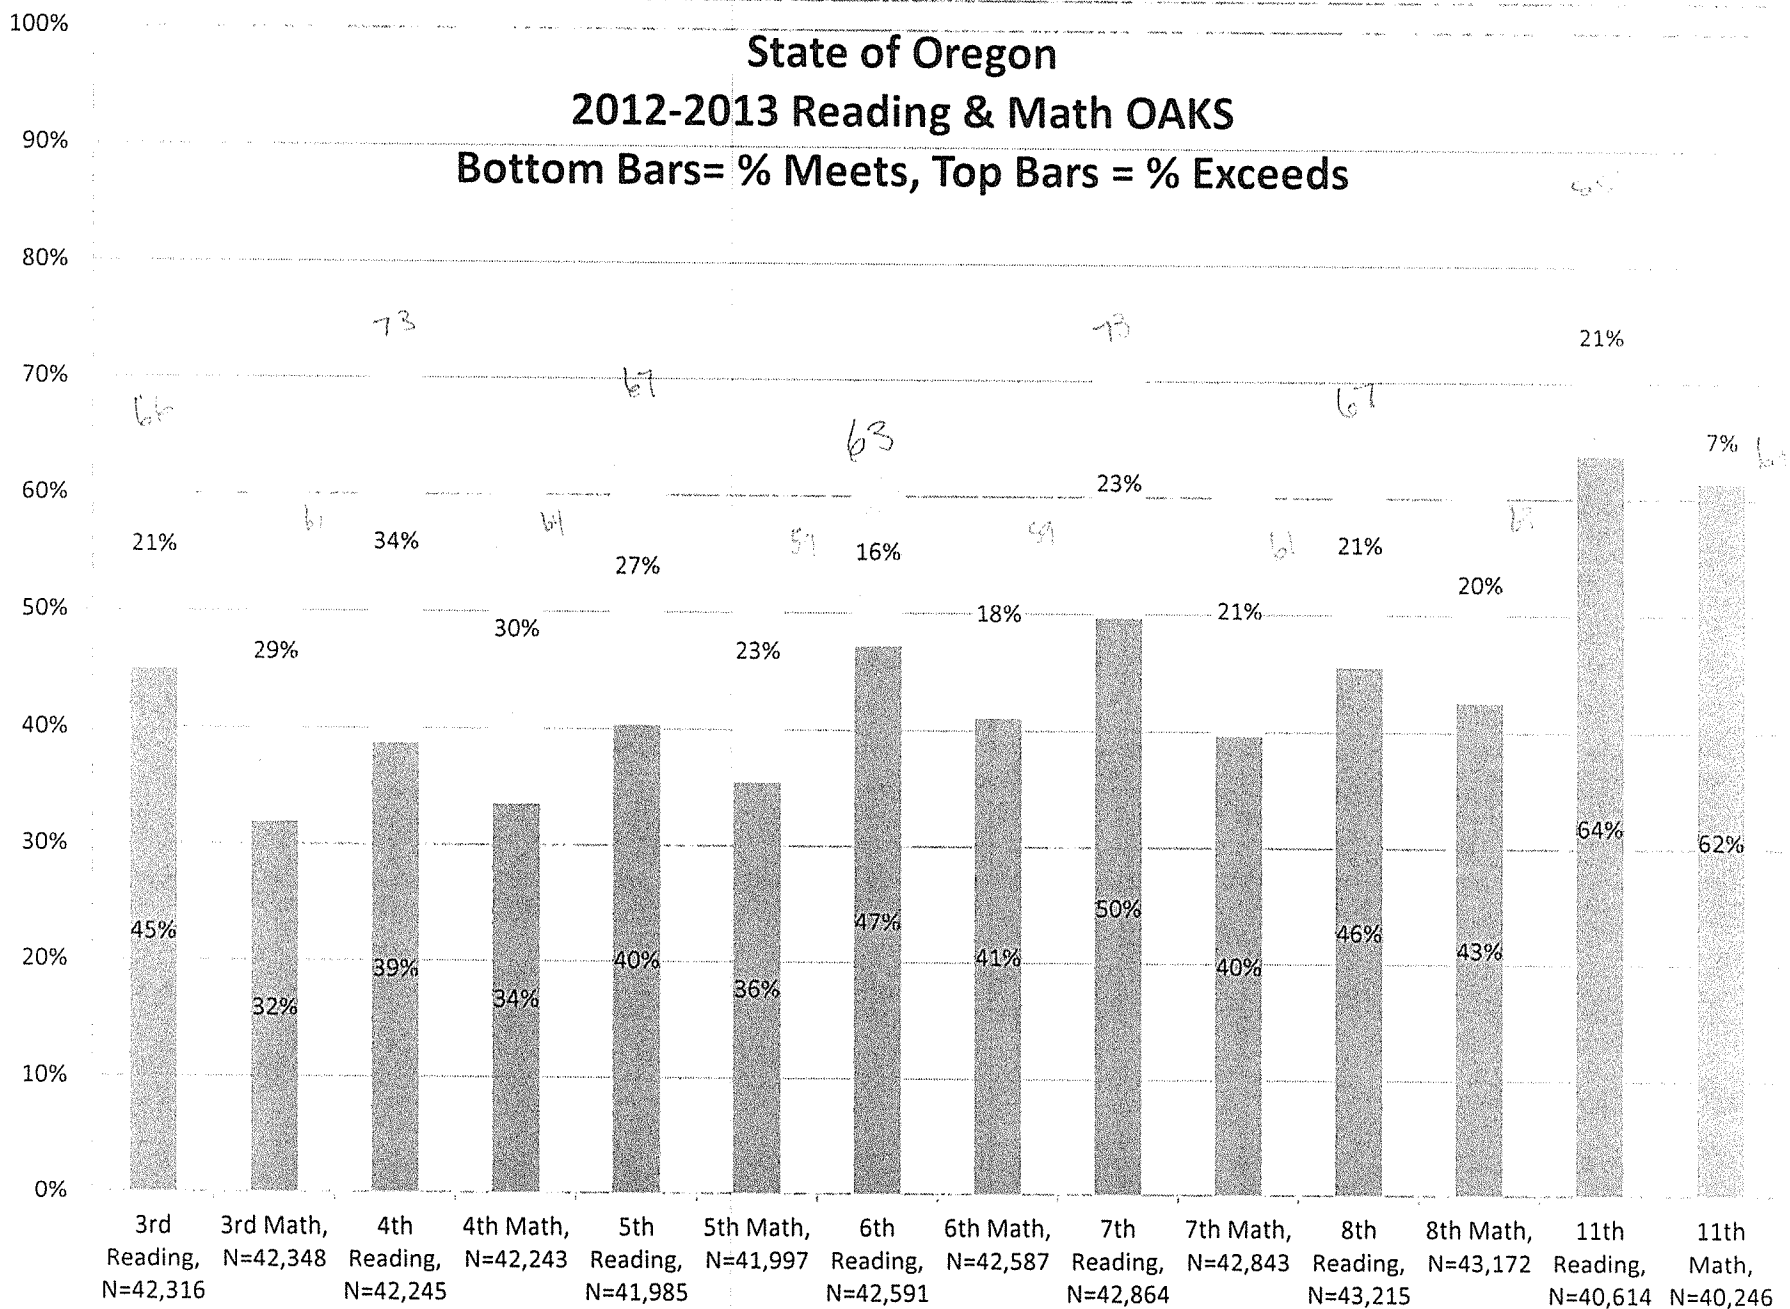

Content Standard: Reading

Grade Levels K-11

Date March 4, 2014

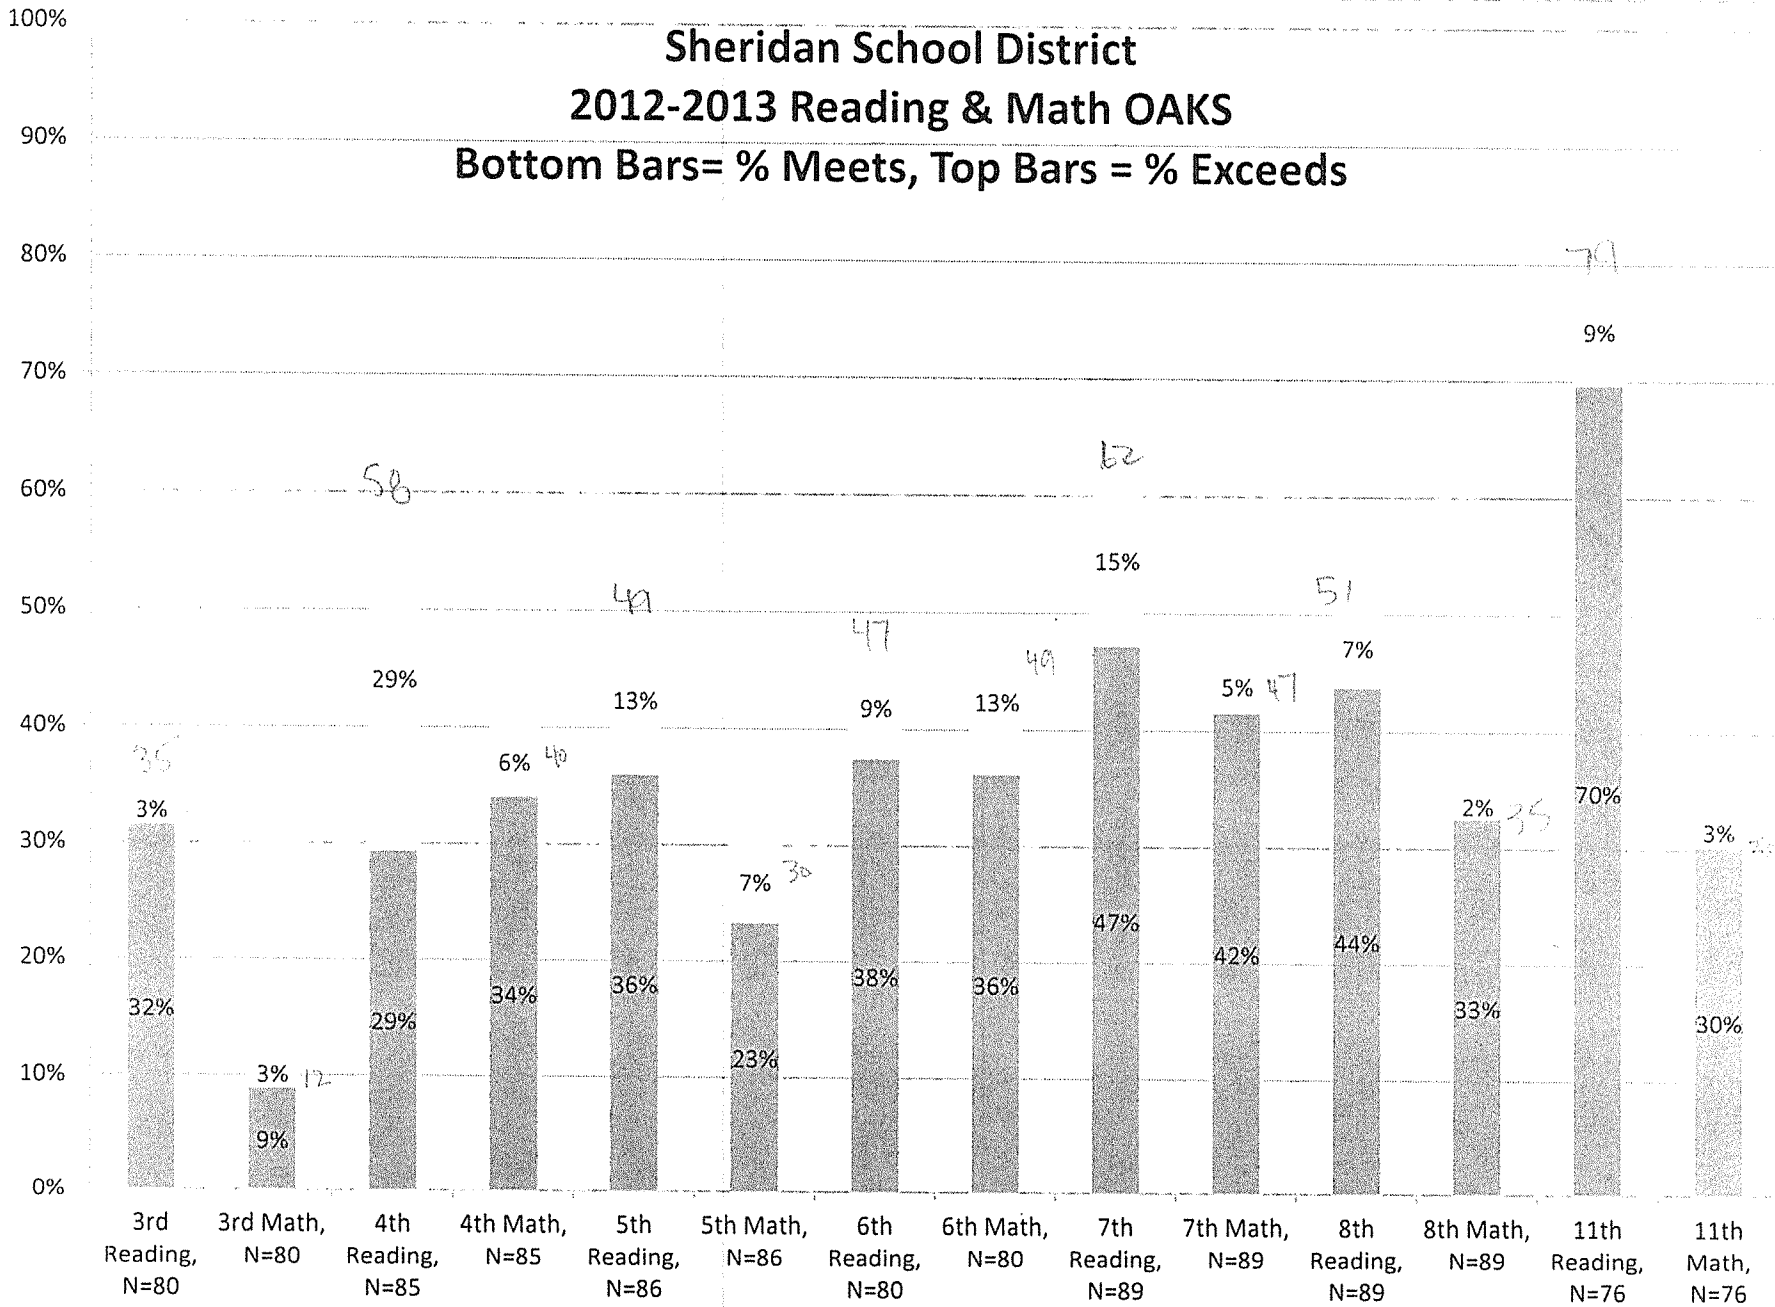

Name of assessment and definition of "proficient"	OAKS	DIBELS	
Proficiency data observations. About what percentage of the students are proficient? Is the trend toward improvement? Are certain grades or cohorts significantly better or worse than others?	75.7% 76.4%	54.3%	
Growth Data. What was the growth for low performing, average, and high performing students? Is the gap widening or narrowing?			
Subgroup data over time (gender, ethnicity, SES, ELL). Identify any gaps/differences and whether they are widening or narrowing.			

State of Oregon
2012-2013 Reading & Math OAKS
Bottom Bars= % Meets, Top Bars = % Exceeds

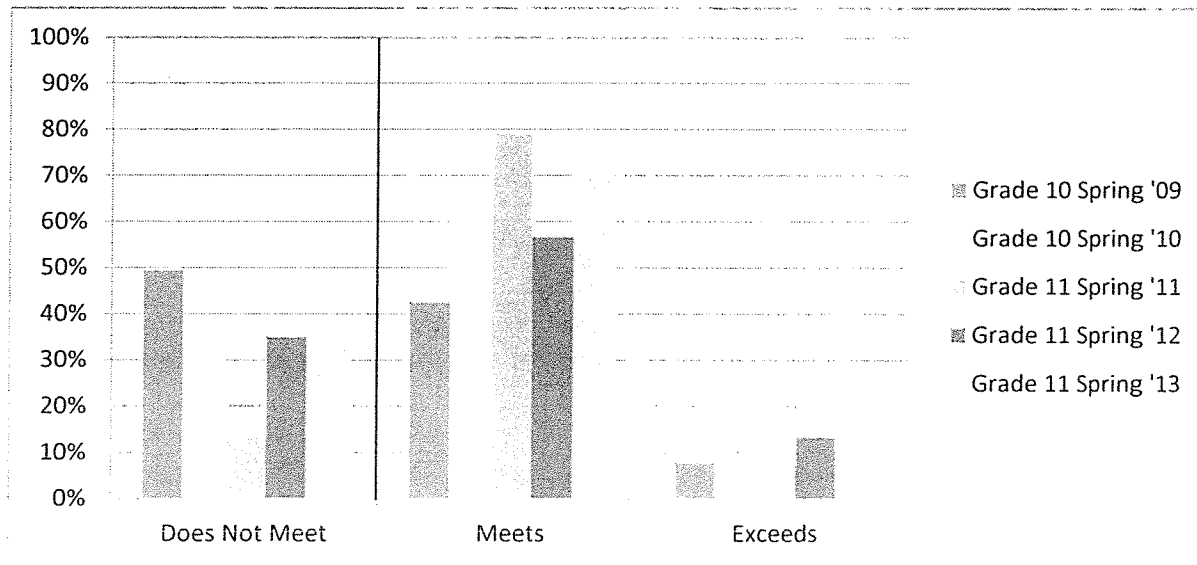

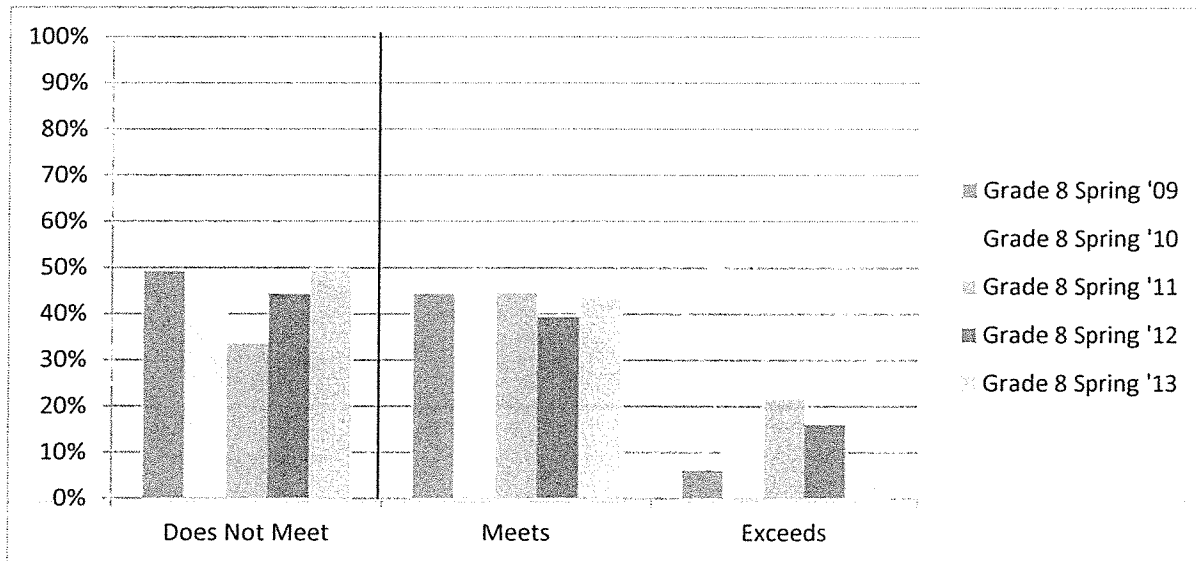

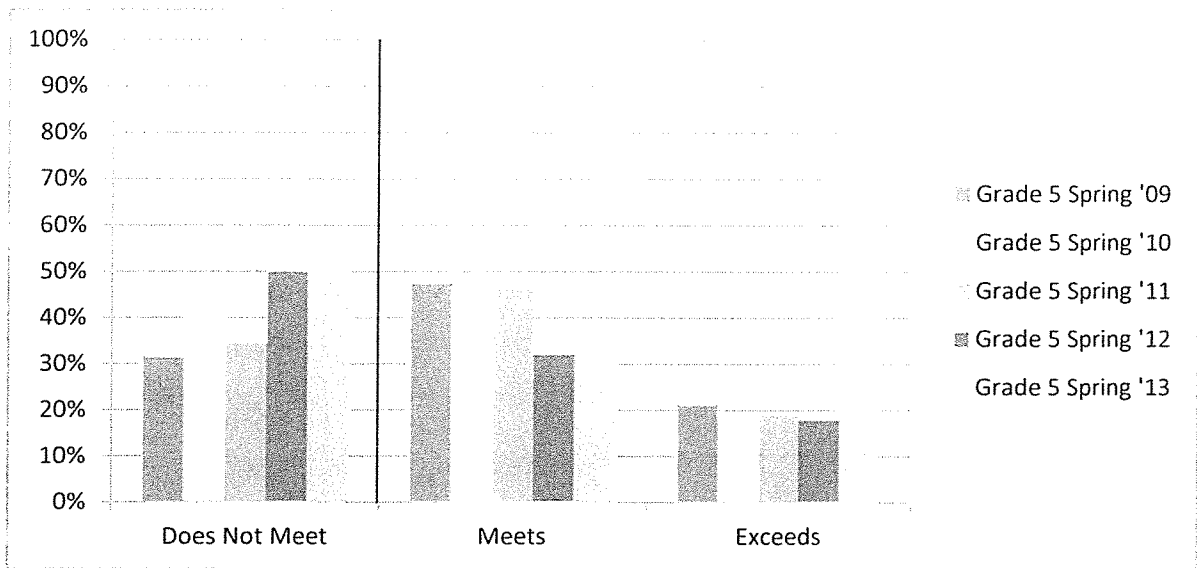

Sheridan School District 2012-2013 Reading & Math OAKS

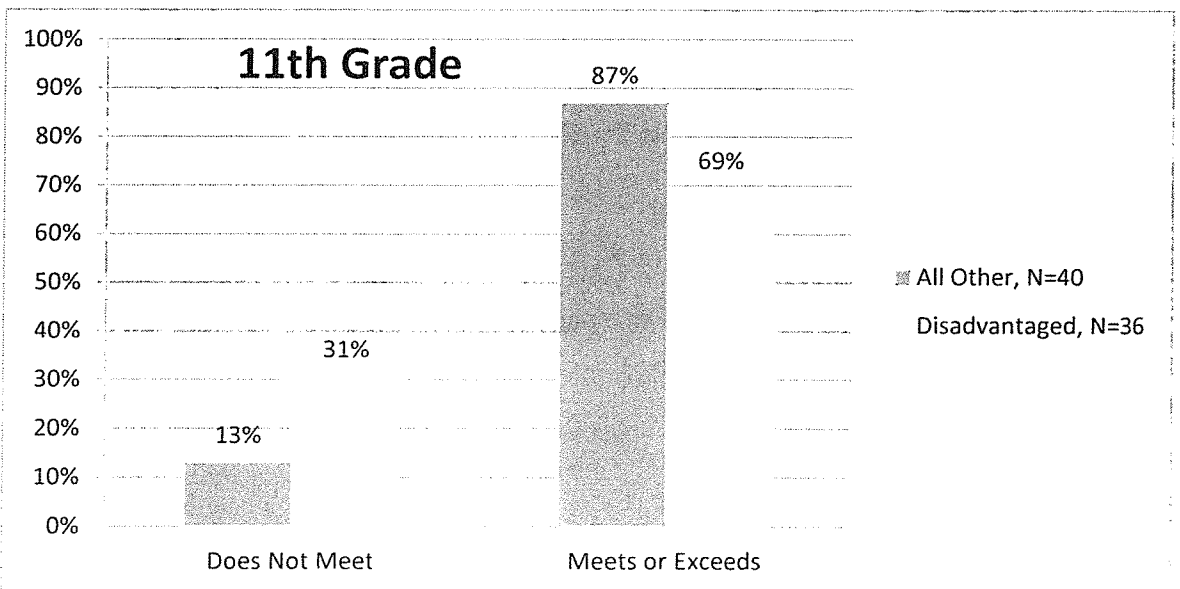

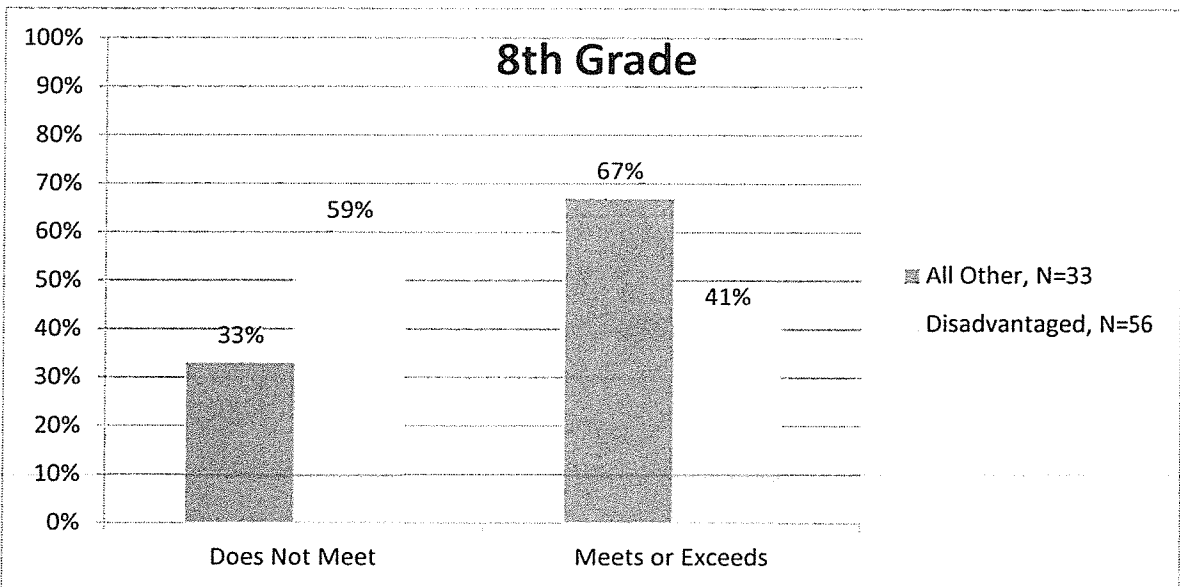

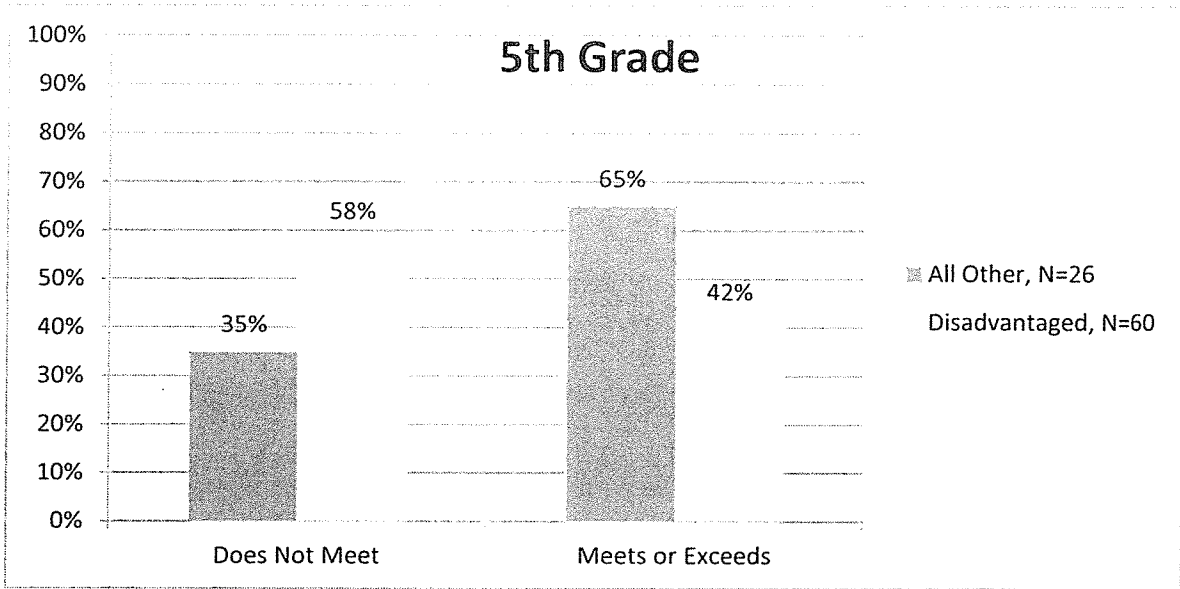

Bottom Bars= % Meets, Top Bars = % Exceeds

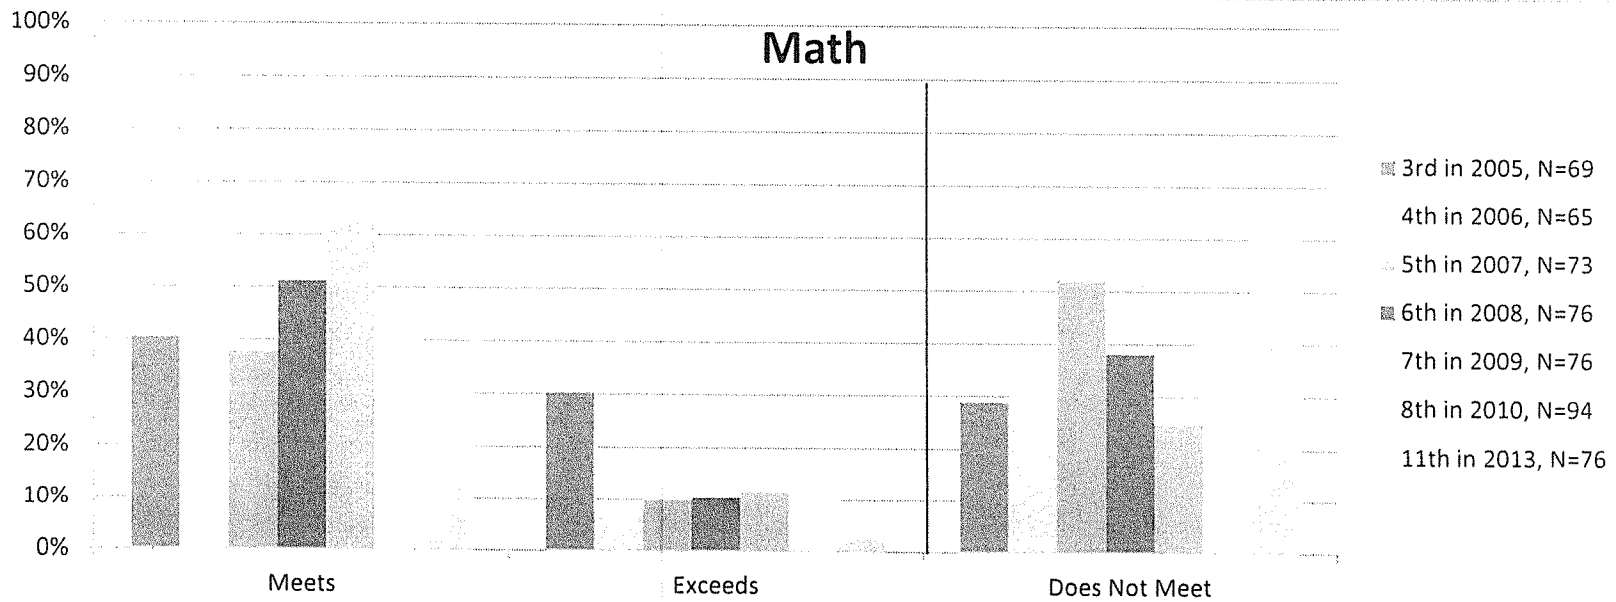

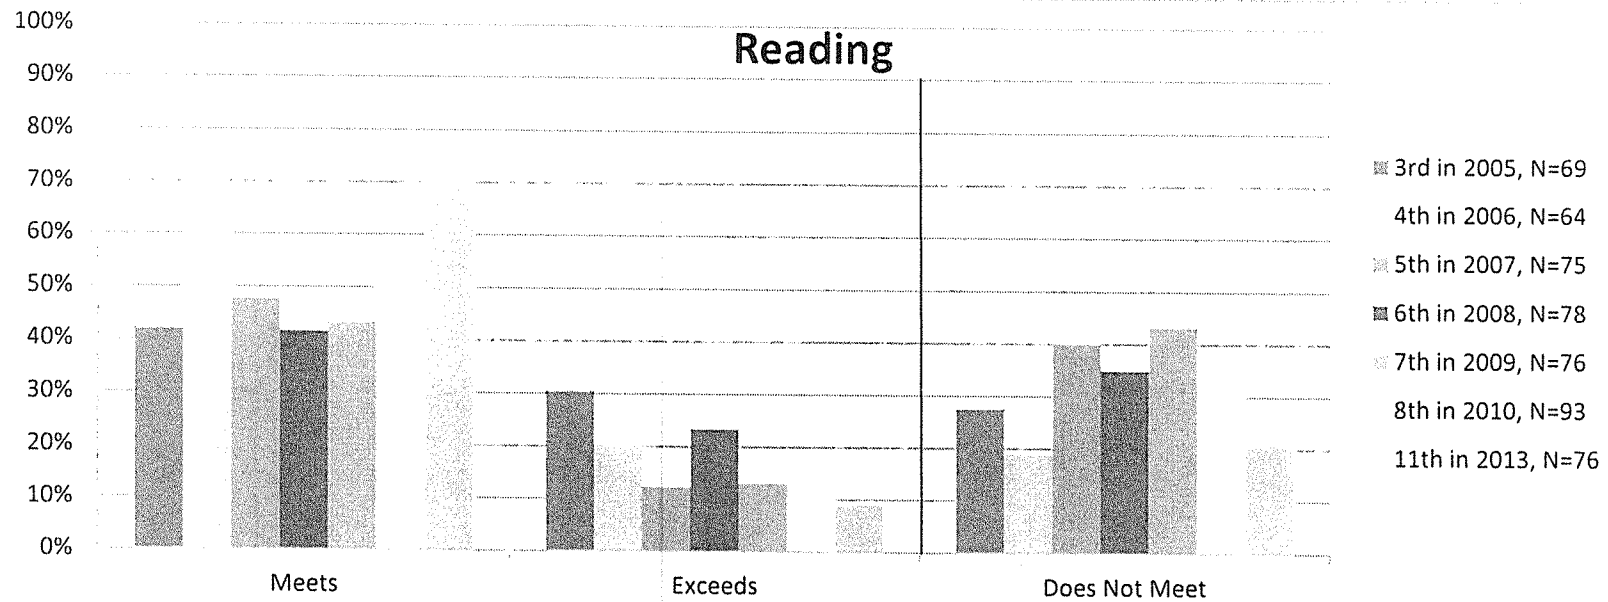

Sheridan School District
OAKS Reading 2009-2013

Sheridan School District 2013 OAKS
Economic Disadvantaged
