to me

Kandy,

Below is an estimate to drill a new water well for the football field irrigation. I changed the casing size to 8", which is what the current well is, because the 6.9" casing makes it very tight to get a 6" pump in. A tight fit can cause some serious issues down the road. For an 8" pvc cased well, you are looking at \$98/ft. I'm estimating that the new depth will be between 340-400ft, depending on where we find the best water. So for 340ft you'll be looking at \$33,320 or up to \$39,200 if we need to go 400ft.

Let me know if you have any questions or concerns.
Thank you.
