A Rapid Emergency Response System

Safety in schools has become an exceedingly prominent and sensitive topic. Active shooters and other violent threats are an unfortunate reality in schools. How can your school stand out as one with both recognition of the issue and an action plan based on the concerns of parents and administrators?

BluePoint Alert Solutions provides the most state-of-the-art Rapid Emergency Response System.

No matter what your response protocol is currently—lockdown, run-hide-fight, ALICE—the real barrier to faster response is the human-centric tasks needing to be completed.

These tasks take too much time, especially when people are in a state of panic.

True Life Safety

BluePoint's solution is unique because of the true life-safety approach. The technical requirements that make the fire alarm the most reliable system installed in buildings have been replicated in our emergency response solutions, making our communications platform compliant with FEMA's recommendation for Incident Command Structure and Multi-Hazard Communications.

Simple, Intuitive Activation

The BluePoint solution is specifically designed for crisis situations such as school shootings. Its user interface is designed to be familiar, simple, and intuitive, enabling effective usage even in high-stress scenarios. Training is not required for activating the solution; users only need to know when and what to do after activation.

To further enhance the system's effectiveness, wearable mobile pendants are included alongside standard pull stations. These pendants enable individuals moving around the building to activate the system quickly and securely if they encounter an active threat.

Building-Wide Notification

As a true life safety solution, BluePoint notifies all occupants of a building—employees and visitors alike—to take precautions through strobe lights and audio messaging that reduces panic and confusion. The messaging can include a reminder of the response protocol (lockdown, run-hide-fight, etc.) as well as assurance that police are on their way. Strobe lights reinforce the messaging, especially in high ambient noise areas and outside buildings, warning people not to enter.

BluePoint mobilizes a patented technology solution to reduce the number of human touchpoints during an emergency to enable faster response.

A TRUE-LIFE SAFETY APPROACH

Police Alert System

BluePoint's solution is unique because of the true-life safety approach. The technical requirements that make the fire alarm the most reliable system in a building have been replicated in our emergency response solutions, making our communications platform compliant with FEMA's recommendation for Incident.

"True Life Safety" = Redundant Platform

- Blue Point has a redundant battery and hard wired powered.
- Blue Point has a redundant district network as well as an independent cellular network.
- Blue Point is fully supervised by a 24-hour UL rated call center.
- Blue Point Alarm notifies Seconds Matter, EM24 and Blue Point twice a day, ensuring the health of each pull station and the entire system.

Command Structure and Multi-Hazard Communications.

When activated, BluePoint Alert Solutions immediately alerts police without having to call 911. Police instantly receive critical information which increases their effectiveness and decreases their response time.

Familiar + Intuitive

Similar in appearance and function to the universal pull station, the BluePoint system is simple and intuitive to activate.

Fast + Reliable

Automated, reliable rapid response system notifies building occupants and first responders within life-saving seconds.

Versatile + Dynamic

The BluePoint system can be customized to fit each building's needs and provides real-time, two-way communication.

Why do we need BluePoint?

4

To decrease the response time of first responders and allow building occupants to take precautionary measures in an emergency. Both steps are likely to reduce risk and shorten the duration of a threat.

The BluePoint Alert Solution is founded on three simple facts:

1. The faster first responders are on site, the faster an emergency ends.
2. The faster people take precautions, the faster they are safe.
3. Panicked people do not think clearly or react rationally.

The patented BluePoint Alert system provides a series of simple initiation devices similar to fire alarm pull stations that are strategically placed throughout a facility for anyone to initiate. These devices take no training and little thought to use. Additionally, mobile devices can be given to strategic building occupants.

Once any device is activated, the emergency dispatch center is notified and dispatches police to the facility. Simultaneously, a pre-recorded message is broadcast through the public address system to warn building occupants of the threat.

The rapid response starts with a rapid alert

In a crisis, seconds truly matter.

Mission Statement

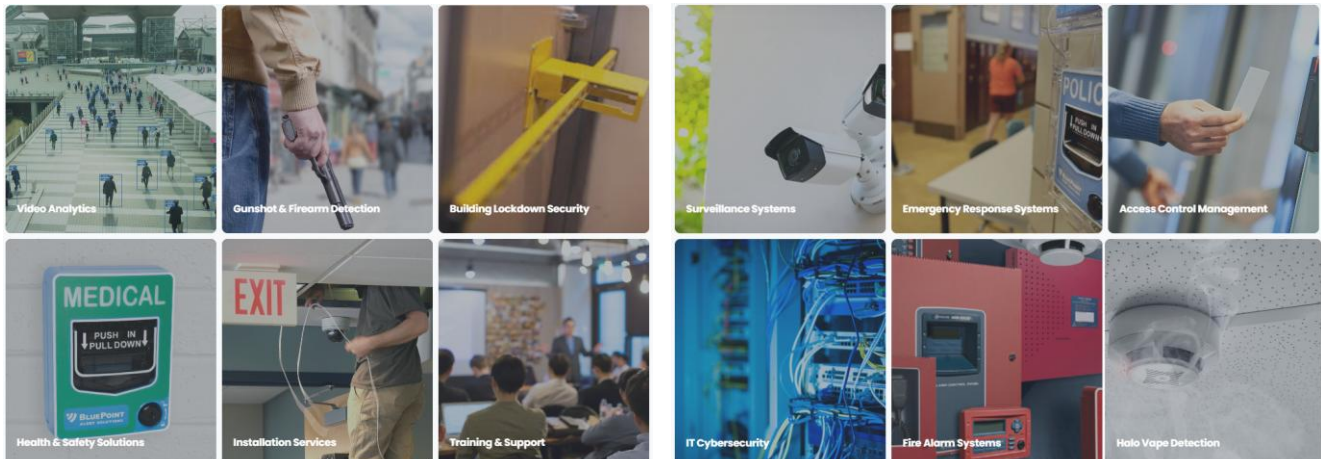

We protect what matters most.

Seconds Matter Safety Solutions is the leading Blue Point Alert System integrators in Illinois. We provide those individuals and departments that are responsible for the safety of students, employees, and the public, the means to comprehensively integrate the latest lifesaving rapid response systems, procedures, and protocols into their institution, organization, or public venue.

SECONDS MATTER
SAFETY SOLUTIONS

Seconds Matter Safety Solutions provides the technology, training, and strategies to support both the rescuer's life and the life of the person/people being rescued. Our goal is simple, SAVE LIVES!

Our technology-based solutions offer a holistic approach to your safety needs. We seamlessly connect your safety-related resources and offer comprehensive support and training to shorten response times with emergency personnel. From alarms and notification systems to emergency response systems and access control - we've got you covered.

Our strategic partners

Our best-in-class technology and systems are built with the end user in mind.

Custom safety and technology plans for each client

No two clients are the same. We customize our safety plans to your needs and budget.

SECONDS MATTER
SAFETY SOLUTIONS

We do all our own work!

As a fully licensed alarm provider in the state of Illinois, we stand behind our work and take pride in it because we do it ourselves. All technicians are Seconds Matter employees.

Comprehensive training & and support

We provide holistic training and support for your safety resources to ensure successful adoption.

Seconds Matter did a phenomenal job designing and integrating the BluePoint system with our existing infrastructure, specific to our needs. The system not only provides immediate district wide notifications but allows our staff and local first responders the opportunity to be in front of a potential crisis. The School Board and parents also feel a great sense of confidence because the system is in place. Not only did Seconds Matter meet all installation goals, they did so with the utmost professionalism.

Dr. Ilandus Hampton

Assistant Superintendent for Business Services - Joliet Township High School

BluePoint's solution is unique because of its true-life safety approach.

SECONDS MATTER
SAFETY SOLUTIONS

WHAT'S INCLUDED

The technical requirements that make the fire alarm the most reliable system in a building have been replicated in our emergency response solutions, making our communications platform recommendation for Incident Command Structure and Multi-Hazard Communications.

With BluePoint, your organization's staff and building occupants have the most simple, intuitive, and responsive means to neutralize a threat.

Pull Stations

Strategically located pull stations provide simple alert coverage throughout your facility including parking lots, outdoor play areas, and all campus buildings.

Strobe Lights & Audio Messaging

BluePoint notifies all occupants of a building to take precautions through strobe lights and audio messaging that reduces panic and confusion.

Wearable Mobile Devices

Wearable mobile devices can be worn by your organization's staff and building occupants depending upon the location. Be ready to act wherever you may be.

Command & Control Portal

Once activated, the Command & Control Incident Management platform provides two-way communication through familiar mobile communication.

With BluePoint, your teachers, staff, students, and visitors have the most simple, intuitive, and responsive means to neutralize a threat.

A true-life safety approach

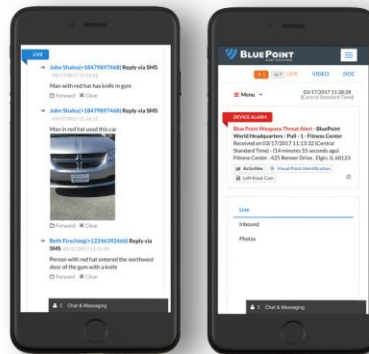

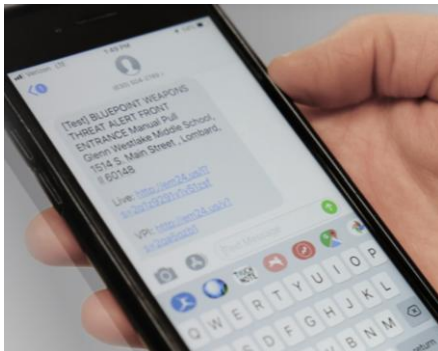

2-Way Communication Portal

Building occupants provide real-time situational awareness to the Command Group through simple text or email responses. Common word filtering offers the Command Group quick insights into the information being provided. The Command Group is equipped to provide faster, more informed instructions to the building occupants.

Mobile Alerts & Notifications

Instant text, e-mail, and voice communication with designated groups. The Command Group has access to all information from any device through the emergency mobile command center. Situational awareness is gained through automated texts, emails, and phone calls to key stakeholders within a facility.

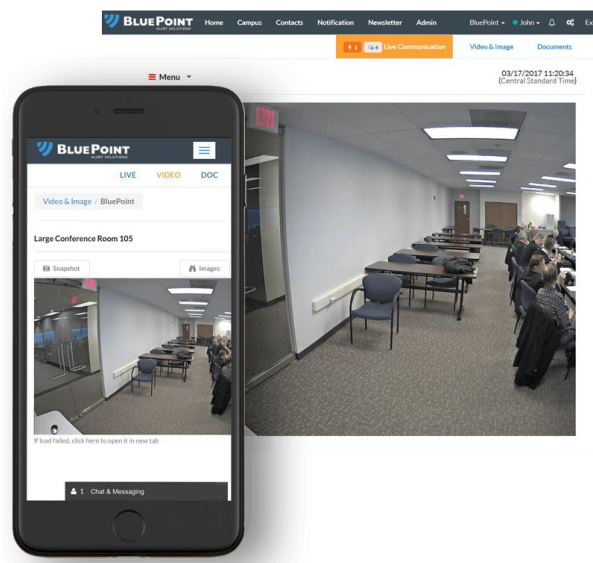

COMMUNICATION AND SITUATIONAL⁹ AWARENESS

Live Security Camera Links (Optional)

Select individuals can be given access to view live security camera feeds on the premises during an emergency. Real-time information is crucial to an effective response by building occupants and first responders.

Floorplan showing where cameras, people, and pull stations are located.

VPI (Floorplan)

Your facility layout with pertinent information for informed decisions.

-  Police Pull Station
-  Strobe
-  Activated Pull Station
-  Closest Camera
-  Other Cameras
-  Medical Pull Station

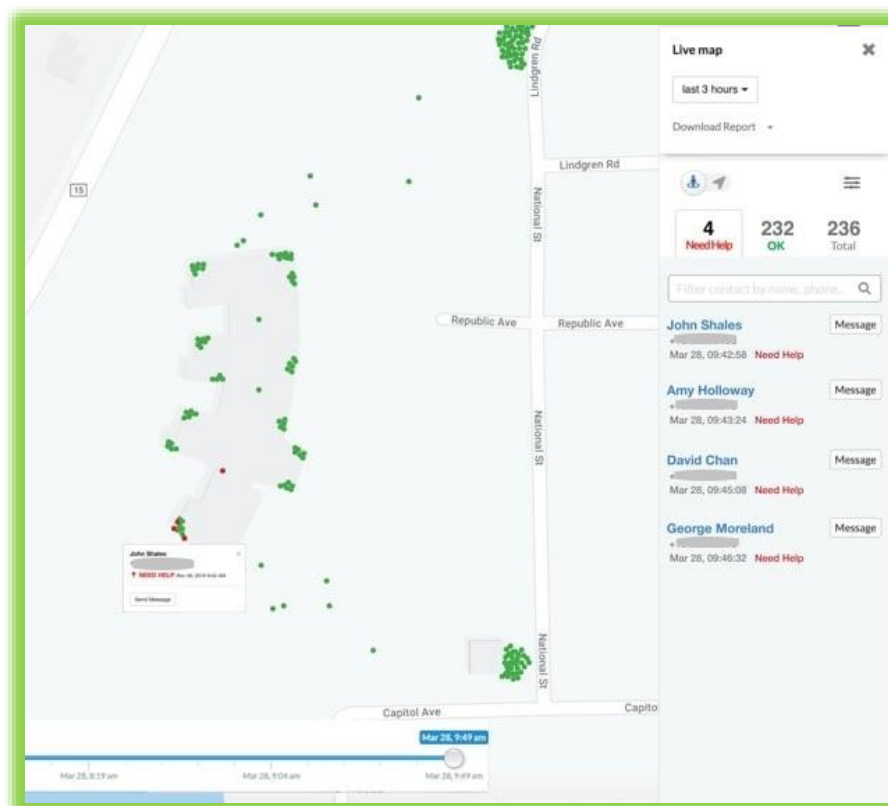

COMMUNICATION AND SITUATIONAL AWARENESS¹⁰

Location & Reunification

People can report their location, and – during the crisis only – have their location tracked. This allows first responders to see where people are, where they are moving to, and where they are moving from. It also provides a means for people to respond with their status: “I’m okay” or “Need Help”, which enables first responders to get a quicker handle on the severity of the situation.

BluePoint Command and Control enables building leaders to more quickly account for their people during the reunification process.

Medical Alert System

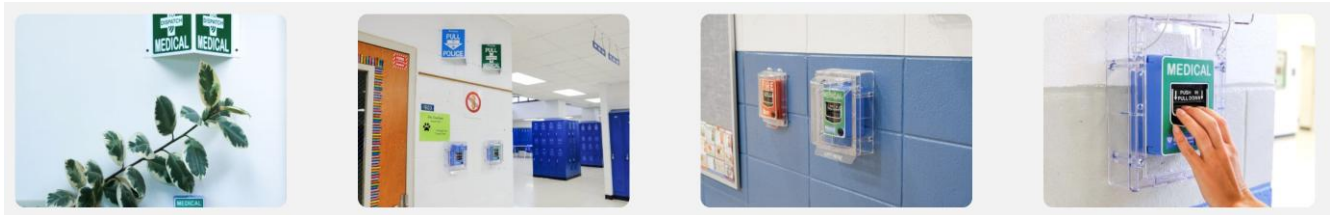

The BluePoint medical emergency devices are created to both complement our police alert systems and be used as a stand-alone solution.

Designed to save lives by reducing the response time of both internal and external emergency responders, the solution equips responders with critical data to expedite their decision-making and ensure prompt and accurate medical assistance.

First Responders or Paramedics

Placed in areas with higher risk of medical emergencies – lunch areas, manufacturing production areas, gyms, nurse offices, etc.

– these devices alert a group of people in the building of the location of a problem as well as communicate automatically to designated medical first responders such as local paramedics.

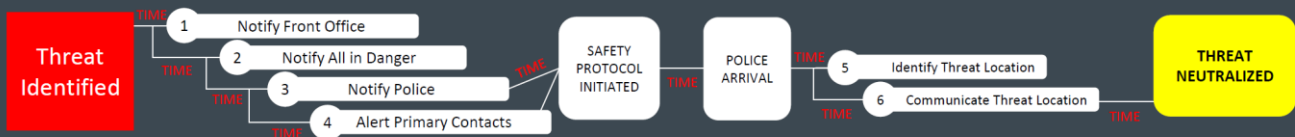

Faster response saves lives!

BluePoint mobilizes a patented technology solution to reduce the number of human touchpoints during an emergency to enable faster response.

1 Traditional Emergency Communication

This strategy presents challenges to completing these critical steps in a timely manner and without interruption.

2 BluePoint Emergency Communication

BluePoint Alert automates these critical steps into one action to reduce response time

WHAT PEOPLE ARE SAYING ABOUT BLUEPOINT ALERT SOLUTIONS

14

Tiffany B

Mother of a student at a BluePoint-protected school, Illinois

"Anything that can increase the safety of our students is a great asset to our school."

Bryan F

Director of Safety at a 5,000+ member church, Illinois

"Everybody is vulnerable to active shooters, and if you cut down the response time by even a minute, that's countless lives that you could be saving."

Tara W.

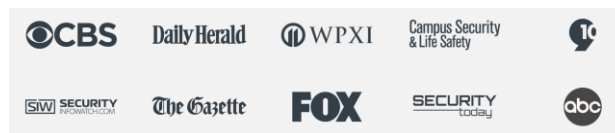

Parent at a BluePoint-protected school, Louisiana

"For me as a parent, this [BluePoint system] gives me the ease and comfort to know that even in the event that something does happen—we always pray that it doesn't—that our kids have some technology to be safe."

Ted Stec

Superintendent of Lombard School District 44, Illinois

"The BluePoint system allows us to have immediate access to emergency officials so they can respond faster and with the information they need for more informed decision-making."

Brian Bastian

School Resource Officer of Lombard School District 44, Illinois

BluePoint Alert Solutions is "extremely beneficial—you can't have anything better and it will cut our response time in half. For information to go straight to our cell phones and get that alert page within seconds—it's lifesaving."

Dr. Kevin Nohelty

Superintendent Dolton West School District 148 Seconds Matter and BluePoint Alert Solutions is "extremely beneficial—you can't have anything better and it will cut our response time in half."

BluePoint Clients

“Collaborating with Seconds Matter Safety has been an incredibly positive experience for myself, board members, teachers, students, and parents. The services Seconds Matter Safety offers are absolutely top of the line.”

Joe Matise, Superintendent Ridgeland School District 122

“Seconds Matter did a phenomenal job designing and integrating the BluePoint system with our existing infrastructure, specific to our needs. The system provides immediate district-wide notifications and allows our staff and local first responders to be in front of a potential crisis. The School Board and parents also feel a great sense of confidence because the system is in place. Not only did Seconds Matter meet all installation goals, they did so with the utmost professionalism.”

Ilandus Hampton, Asst. Supt. Joliet Township High School District 204

SEE Exhibits for Maps and Locations of Devices

District Office

Transportation Center

Financial Plan Summary

*Blue Point initial installation and programming for the first year is **\$106,426.00***

The annual maintenance and **monitoring**(required) costs will increase based on 2 buildings with less than 100 contacts. Service will occur 2 times per year with battery replacements 1 time per year. **\$5,848.00** billed yearly. This amount will be billed when the system is activated and be added to your current account in future years.

Optional Services:

IP Camera Integration

The camera integration costs have a yearly cost per year and one time setup fee. The setup fee for cameras is \$750.00 for each group of 10 cameras (\$75 per camera) and \$50.00 per camera per year. Camera feeds are NOT recorded. This service is only meant to provide key/strategic Admin-level users of the C2 portal real-time access to camera feeds in the event of an alarm activation. No modifications, repairs, or additions to the customer's camera system are included with the BluePoint camera integration feature.

SMSS recommends and will provide all district staff with personnel and technical training on the BluePoint Life Safety Platform when appropriate. Key district personnel receive additional technical training on the use and management of the C2 platform. In addition, local first responders are trained to integrate and utilize the system in the event of an activation.

Initial training, C2 maintenance is a part of the proposal. Yearly and ongoing training is \$2,000 per year.

- School Board Representative/s
- Schools Resource Officer
- Safety/Security Director/s
- Safety/Crisis Team per Building
- IT Director
- Local Law Enforcement and Emergency Response Leaders

Learn about the C2 platform tools.

Practice using the C2 platform with a live demo.

Develop roles and responsibilities for the C2 platform use during a crisis.

Identify the medical response team per building.

Identify key personnel to manage and update the C2 platform.

Scheduling district drills.

TRAINING

ADDITIONAL SYSTEM INTEGRATIONS²¹

(OPTIONS AVAILABLE – NOT INCLUDED IN PROPOSAL)

We met with emergency responders throughout the country and asked: What tools would be most beneficial to improving response? We learned what was truly valuable and what wasn't, forming the creation of a highly useful solution based on actual needs.

Silent Alert

Designed for protecting people at the front desk, the receptionist can remain engaged in conversation while discreetly alerting others in the facility – and police if necessary – to an escalating situation.

Sound Detection Integration

Both gunshot and breaking glass sound detection systems can be seamlessly integrated with the BluePoint Solution to provide even faster response times. For additional questions please email us.

Two-Stage Response

If desired, internal first responders are notified first. If the situation is beyond their capabilities, they initiate a second-stage notification to external first responders and personnel.

Access Control/Fire Door Activation

Integration is easily accomplished through our control panel. Lock, unlock, and close doors at your discretion and the direction of local law enforcement.

Blue Point Alert Solution is engineered with²² life safety at its core.

Hardware User Interface

BluePoint Alert Solutions engineered its systems with life safety at its core. The following are some of the attributes required of other life-safety systems that are incorporated into our solution.

- All components supervised
- Redundant communications
- Battery back-up
- Secure from unauthorized disabling
- Notifies all facility occupants
- 24/7 security
- UL and FM-certified monitoring

Central Station Monitoring Systems

BluePoint Alert Solutions systems are monitored by an Underwriters Laboratories (UL)-listed and Factory Mutual (FM)-approved Central Station with the following attributes.

1. Four (4) interconnected operating stations located throughout the United States including the East Coast, West Coast, and Midwest. These facilities have comprehensive disaster recovery plans in place

2. The UL/FM-Listed Central Station significantly surpasses the UL/FM requirements

Four sources of power—2 primary and 2 secondary

b) Secondary sources of power can run for 145 hours without refueling [UL requires only 12 hours]

c) Central Station operates on secondary sources of power weekly under full load for 45-minutes

d) Central Station maintains multiple, real-time on-site and off-site back-ups. There are currently five (5) backup systems in place

e) Data centers and operations centers at primary and secondary locations have active, redundant HVAC systems on back-up power [UL has no requirement for redundant systems]

f) All alarm receivers have a complete real-time back-up plus the UL/FM required cold back-up per 5 hot receivers

g) All systems are protected from fire by a non-water fire extinguishing system.

- a) (FM 200) that will protect equipment from water damage [UL only requires some form of fire extinguishing]

Information Security

The following are attributes of the Command & Control (C2) Communications Platform running on the UL/FM-listed Central Station systems.

1. Multiple carriers provide four (4) independent connections to the internet, each monitored and fully redundant
2. Configured firewall systems, with port level access control lists, installed behind all internet connections
3. Firewall configurations reviewed on a weekly basis
4. All internet connections implement a configured intrusion detection and prevention system (IDS/IPS)
5. IDS/IPS configurations reviewed weekly and monitored with immediate notifications to network admin group
6. Access to routers are via its console port only
7. Weekly auditing of access to routers, firewalls, and IDS/IPS
8. All networked devices maintained at the latest patch level
9. Data-centers do not use any wireless connectivity into network systems
10. Centralized administration of antivirus software on all networked computers
11. Antivirus software runs on all networked computers; all emails scanned for viruses; antivirus definitions updated daily
12. Antivirus software cannot be disabled or modified by users
13. Level Two compliance with Payment Card Industry Data Security Standard (PCI DSS)
14. Quarterly network scans and penetration testing by a third-party

At BluePoint, we strive to maximize the protection of your personal and private data while it is used to provide you with highest-quality safety and security communications services. This privacy policy covers our and our Central Station's practices as they pertain to your use or your third-party provider's use of the Command & Control Incident Management Systems (C2) website and any mobile sites or applications that we may provide to you for use and/or any other media used for our collection of your private information.

Information Collected

Within C2, BluePoint collects and stores private information about you and the responsible parties you identify including, but not limited to, the following: 1) names; 2) home or business addresses; 3) city, state, and zip code; 4) phone number(s); 5) email address(es); 6) digital information; 7) static/permanent location and/or moving/mobile location(s). Note that we do not collect or store any financial information within the system.

For us to provide our services, either you, or a third-party with whom you have a business relationship, provides us with additional information pertaining to your rapid emergency response system (RERS) or protective system and/or other information required. This information includes, but is not limited to, the type, number, and placement of alarm equipment including: panels, media, sensors, cameras, speakers, microphones, pull stations, mobile pendants, panic buttons, horns, strobe lights, and building infrastructure information.

We capture and store information regarding your RERS system's history including, but not limited to: dates, times, activations, contacts, conversations, alarms, trouble signals, and performance.

If your RERS system includes a video or audio component, or incorporates such components, we will capture an image, video clip, real-time video, or a video stream from the facility. For audio (two-way voice or audio sensors), we will capture and record any words, conversations and/or sound(s) that are loud enough to be transmitted. When you install or authorize a third-party to install cameras and/or listening devices in or around your facility, you are responsible for ensuring that you are in compliance with any and all applicable laws.

If you are using a location-based device that is designed to either monitor movement within a defined space or a geo-location type device that is designed to transmit a signal to C2 as an activation for BluePoint to perform a prescribed response, BluePoint does capture and store location information. We use the location information to perform the prescribed response and to keep a record of the activation.

Information Use

We use the information we collect to perform the service for which you have contracted; to keep you apprised of the state of the facility; to better inform any responsible parties or authority agencies regarding your state or the state of your facility; and to provide you with better services. We share your personal information with:

Authorities having jurisdiction as directed by you or your third-party provider. Authorities having jurisdiction include, but are not limited to: police, fire, emergency services, health service providers, security firms or guards, and building management companies.

Responsible parties are people who you, or your third-party provider, have identified to be notified if BluePoint receives an activation from you, your RERS, or your property.

Members of the judicial system if we should receive a subpoena from a court having legal jurisdiction.

Activations and/or changes to the database are monitored and you will be notified of any changes to the information.

We may also use some of your non-personally identifiable information, such as the equipment used in your system, to converse with system manufacturers or service providers with the goal of fixing an issue or providing you with better security service.

What We Do Not Do With Your Personal Information

We do not rent or sell any of your personal information or personally identifiable information to any party or entity.

Information Security

BluePoint uses several levels of security to protect your information from loss, misuse, and from being changed without authorization.

Any time you enter personally identifiable information into C2, it is done on a secure website (using a secure protocol, e.g., HTTPS).

We require proper identification with passcodes or passwords before we allow any changes to your information.

We use commercial-level security to prohibit unauthorized access to database information through the internet (although no method of data transmission can be said to be completely secure). See Command & Control Communications Platform, above

We monitor our systems rigorously. Any time the system perceives a security issue, notifications are immediately sent to the onsite IT department to investigate. We use a third-party service to monitor our system security and actively search for vulnerabilities.

ACCESS TO YOUR PERSONAL INFORMATION

You can access and modify your personal information within C2 with proper identification and a passcode or password via the website or web application. RERS system “mission-critical” information has to be changed by BluePoint, and may be dependent upon the requirements of the authority having jurisdiction.

“

“Collaborating with Seconds Matter Safety has been an incredibly positive experience for myself, board members, teachers, students, and parents. The services Seconds Matter Safety offers are absolutely top of the line.”

”

Joe Matisse, Superintendent Ridgeland School District 122
