Box Elder School District
for the Purchase of School Buses

Recommendation: It is recommended that the Board of Education approves the construction contract with DWA to construct additional parking spaces at Bear River High School.

Recommended Motion: *I move that the BESD Board of Education* approves the construction contract with DWA Construction in the amount of $1,089,632 for the purposes of constructing new parking lots at Bear River High School.

Background: Bear River High School sits on a 29-acre campus, which is among the smallest high school campuses for its student enrollment in the State. Due to this compressed nature, parking for students has always been a challenge. Currently, students are parking along major roads that border the high school. This creates a student safety issue. To address this issue, the Board approved a budget to move the current softball field to the field area in between the Natatorium and BRMS, to create parking north of the baseball field and to convert the old softball field into a practice field space. This contract is one of smaller projects that will allow the District to create safer parking spaces for students.

The District holds a small construction project contract with DWA Construction. This contract allows DWA to act as our construction manager to manage projects under $3 million in total cost. As part of this process, DWA conducts the procurement process in accordance with state construction standard.

.

Policy Implications: None

Financial Implications: Funds in the capital outlay fund will be used to pay for the construction cost. Total cost will be $1,089,632.

Staff Implications: None at this time.
