KAUFMAN ISD - MAINTENANCE REPORT

November 2026

The Kaufman ISD maintenance team has been working hard to maintain systems and make improvements across the district.

Here are a few of the projects that the crew has been working on this month:

Here, the crew repairs a sidewalk at the concession stand. The walk was repaired and lined with decorative rock. The decorative rock will prevent the soil from washing across the walkway.

The crew took some time to add reinforcing steel to the various walk through gates around the district. The additional steel will help the gates maintain the tolerance required to consistently operate in the shifting ground.

This month, the maintenance team got a request to build a wall partition over at Helen Edwards ECC. The team built the partition during a school break and even got it painted before the students arrived back on campus. Great job guys!

Controlling soil erosion is a never ending battle around the district. Here, the crew hauls in loads of dirt to fill in low places at Nash and the other campuses.

Finally, the crew will spend the next few weeks preparing for the winter season. Here, the guys work on various drain systems so that our buildings will shed water properly during the upcoming rains.
