

Stewartville Public Works

Public Works Bi-Weekly Council Report
10-22-26 thru 11-4-26

- Leaf collection has been delayed a bit due wet weather but Public Works is out every day collecting leaves.

- Materials have been picked up for the new pavilion being built by the beginning of the Frisbee golf course. We shrunk the size of pavilion down to get it under the 200 square foot maximum requirement so that we do not have to get a building permit for this, which would require engineering that would drive the costs up. We will get this built this fall and have it ready for park opening in the spring of 2027.

- Jake Burzinski made a trip into Wisconsin with our Wastewater Engineer (Susan Danzl) to investigate some new biosolids handling options.

- We may have another week of mowing. We did not mow this past week because of the wet weather but will probably hit everything one last time next week.

- We have begun to close the parks down for the season. The forecast for 26 degrees on Friday night prompted us to get them closed down.

- We had the contractor for Root River Rental acquire additional costs trying to locate the water and sewer services on their new lot. They have asked if the City helps with the additional costs since we marked them out. When they were marked out Jacob Chopp went off of the record drawings which were apparently off the mark. It is agreed that Jacob did the best he could with the information given to him and that the costs should be on the property owner.

- Goats have been moved back to hit some of the more problematic areas for a 2nd time this season.

- The asphalt patches have all been patched back in along with the entrance to the Florence walk bridge. This had settled and was an issue for tripping or wheel chairs.

I am off for 2 weeks for hunting but will be in for the council meeting.
