

## March Maintenance Report

With spring sports starting grounds and maintenance have been busy getting all of our playing fields up to standards. With softball being held off campus this year, we were able to focus more attention around the baseball and track fields. Maintenance have been very involved in learning more preventive maintenance and repairs on HVAC equipment, with Bruce Heating and Cooling leading the way we have made a few minor repairs on units at the High School and Middle School ensuring an easy start up for warmer weather to come. Maintenance will be doing the annual cleaning/start-up of the High School cooling tower as soon as temperatures rise a bit more. I have also attended my annual asbestos training refreshers in Pendleton. I have started to receive equipment and supplies for our two new buildings! For the time being I will have it all stored at the maintenance and delivery it to the buildings when it is ready to be installed.
