**Re: Authorizing Bid Appropriation for Technology Infrastructure and Equipment**

Coppel ISD has received proposals for **CISD Technology Infrastructure Upgrade RFP# 1307** which includes:

- redesign of district network infrastructure to improve efficiency and redundancy
- upgrade campus networking equipment to support enhanced wireless infrastructure
- upgrade current data center equipment at the core
- consolidate network servers through server virtualization expansion
- upgrade and virtualize phone system to latest stable release
- augment and redesign existing systems for Disaster Recovery

Three proposals were received and reviewed. We have finalized our recommendation based on the following criteria: price, meeting district needs, prior experience with network infrastructure and data center planning, implementation team qualifications, warranty and support.

**Recommendation: That the Board of Trustees accept the proposal from Presidio / INX for their comprehensiveness of the plan, experience, and working relations with the district.**
