Dear School Board Members:

We end the month of September with an attendance rate of 97%. We have begun a composting project, which we plan to continue throughout the year. We have started out with a small amount. The students are pleased to add their apple cores, potato peelings, etc in our container. By spring we hope to have some new enriched soil. We have also begun growing some carrots from just the tops of the plants.

We have had our first fire drill. The students left the building and lined up in an orderly manner and everyone was safe!

The park rangers have been out and gave us a lesson on birds. The students went for a walk, collected some things that birds would use for food and played a game.

The students are currently researching the different countries of South America, and will present their papers in a couple weeks. The school is split into six groups, each group studying two different countries.

Respectfully submitted,
Ellen Christoferson
