

## **Agenda Item C - Curriculum Spotlight**

### **Project Based Learning**

The Kindergarten classes and the Sixth Grade Science classes participated in a collaborative project called K6 Creations: Animal Trading Cards. During the first day of the project, students listened to a story about animals read by a 6th grader, then used iPads to scan hidden QR codes to discover the designated animals for the project. Students read the information about each animal located on the website coded in the QR code. On the second day of the project, students worked together to create cards about each animal using the QR coded website and the trading card website. A class set of 31 trading cards was produced for each class to use to study various characteristics of animals and their habitats.
