College Readiness Report: SAT and ACT Scores for CHS 2007

Todd Kettler

This discussion item will include a summary of the SAT and ACT scores from the graduating class of Coppell High School in 2007. The data will reflect trends on both exams over the last seven years and comparisons to state and national averages. Additional data reported by the ACT program will indicate the percentage of our ACT test takers who score at or above the college readiness level on the ACT.

Some demographic data and college planning data is also included in the report. For instance, what are the top five schools to which our students send their SAT scores and what are the most common anticipated fields of study of CHS graduates? Do male or female students earn higher mathematics SAT scores? Does the number of mathematics courses impact a student's SAT mathematics score?

This is a no action required discussion item.
It will include a PowerPoint presentation.
