

## Solar Panel Proposal

The picture I have shown above is the most ideal place to put the solar panels and here's why. First of all, it's easily seen by students as they walk by. People will get a good impression on Lincoln Hall and they'll think that Lincoln Hall is an environmentally friendly school. Additionally, it's facing south so it'll get lots of sunlight and there's enough room to fit 6 solar panels. Finally, it doesn't obstruct the students view from outside a window. We don't want to obstruct the view of students when they look out the window, so in this place, there are no windows.
