

## Spring 2021 MAP Growth

### **Understanding MAP:**

The NWEA MAP Assessments are given in Fall, Winter and Spring to measure student achievement and indicate what they are ready for next. This is an adaptive assessment, which results in a RIT score for each student. These scores then help inform instruction, are connected with various ed tech resources we have available to support students at their level and help develop a student profile.

### **Assessments path:**

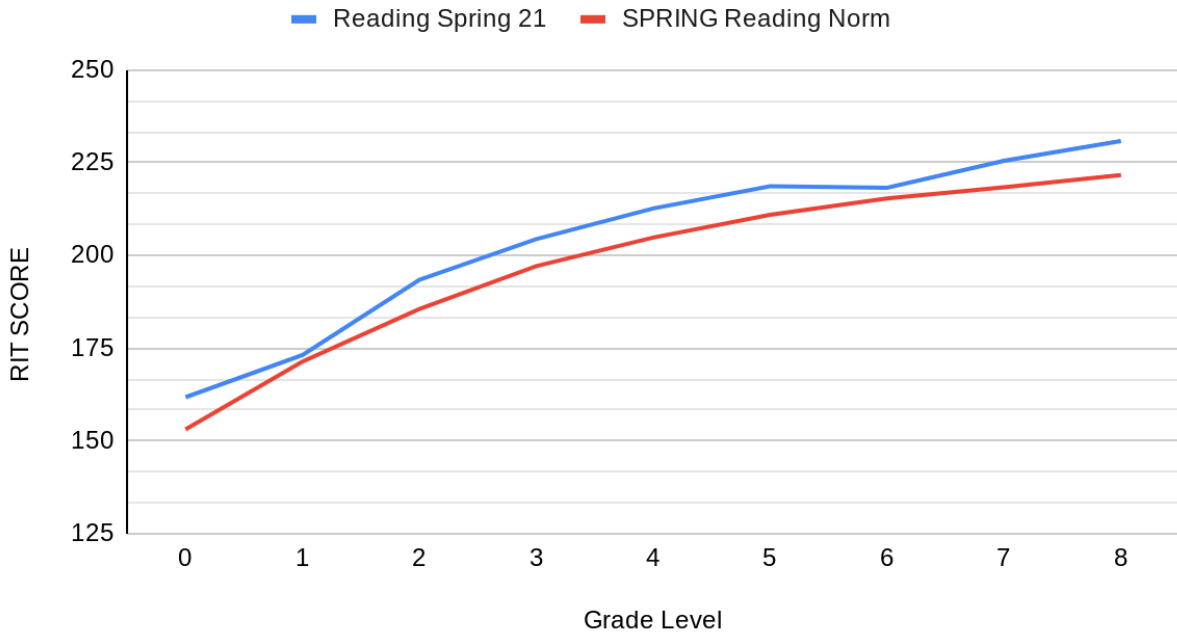

- MAP Growth K-2
- MAP Growth 2-5
- MAP Growth 6+

**RIT scores:** “It represents the level where a student is ready to learn, also known as the Zone of Proximal Development. The test finds that level by pinpointing where a student would just as likely answer incorrectly as correctly, the point between knowing and not knowing answers.”
