## **Technology Report**

Some of our summer projects include a good tech inventory, clean up of switch areas (rewiring patch panels), updating servers, as well as firewall, vlan and switch settings. We have to update, reorganize, and advance google organizational groups, active directory groups, and clean up staff files and directories also.

With the e-rate funding we receive for internet use, we have to review our AUP and filter settings. We are doing that at this meeting.

We continue to do work orders submitted, although we do have to word around summer school and maintenance schedules of waxing floors.
