Re: Celebrating Success - Artificial Intelligence

Daniel Wright is excited to showcase how our teachers are thoughtfully leveraging artificial intelligence (AI) to amplify student learning and engagement. From enhancing lesson design to fostering creativity and critical thinking, AI is helping educators elevate instruction in meaningful ways. Our technology coach, Mrs. Diane Powell, will highlight concrete examples of how teachers are integrating AI to enrich lessons, personalize learning, and empower students to explore new possibilities. This work reflects our commitment to innovation and to preparing students with the skills they need for the future.
