Economic and Market Commentary: Investing in the now

April 1, 2024

It is hard to live in the present in general, but that is particularly true in business and finance as so much is predicated on what comes next. Whether it is the big “E” in the equation for determining future value or the lower-case “e” of the word itself, expectations rule.

But in the case of liquidity products, the here & now is attractive and the near & future looks good, too. For one, rates continue to be at historic highs. As expected, Federal Reserve’s Federal Open Market Committee meeting mid-March left the target federal fund range at 5.25% to 5.5%, the more than two-decade high at which it has sat since July of last year.

The Fed will eventually lower rates but based on the additional materials of the FOMC meeting rather than the statement, that action seems to be down the road. While the new Summary of Economic Projections (SEP) did not change its call for three quarter-point cuts this year that it had forecast in December, we think the first ease will not arrive until July. And it is within the realm of possibility that the June SEP will indicate just two will come by the end of 2024. The Fed is loath to alter monetary policy near a presidential election, and inflation’s recent back-up reminds us that the last mile is the hardest. Retail sales show the economy is steady and the labor market remains robust. In fact, the SEP reflected slight

**Definition of Weighted Average Maturity and Weighted Average Life

WAM is the mean average of the periods of time remaining until the securities held in TexPool (a) are scheduled to be repaid, (b) would be repaid upon a demand by TexPool, or (c) are scheduled to have their interest rate readjusted to reflect current market rates. Securities with adjustable rates payable upon demand are treated as maturing on the earlier of the two dates set forth in (b) and (c) if their scheduled maturity is 397 days or less; and the later of the two dates set forth in (b) and (c) if their scheduled maturity is more than 397 days. The mean is weighted based on the percentage of the amortized cost of the portfolio invested in each period.

WAL is calculated in the same manner as WAM, but is based solely on the periods of time remaining until the securities held in TexPool (a) are scheduled to be repaid or (b) would be repaid upon a demand by TexPool, without reference to when interest rates of securities within TexPool are scheduled to be readjusted.

upticks to growth and inflation projections. But they still are consistent with a picture of inflation eventually moving back to 2% amid solid 2% economic growth, the “soft landing” holy grail. So, having reeled in market expectations for aggressive easing, the Fed might need to hold the line taut to keep them hooked even though it has penciled in 75 basis points of cuts.

As promised, quantitative tightening was a major topic of discussion during the FOMC meeting. In his press conference following the release of the statement and SEP, Fed Chair Jerome Powell said policymakers discussed tapering the pace of the balance sheet runoff. He said that might begin “fairly soon,” which in Fed speak translates to as early as the May FOMC meeting. Unprompted, he made the point slowing the pace might allow the Fed to get to a lower balance sheet. He also commented that the Fed would be watching money market conditions as one means of judging if bank reserves are declining too much as the balance sheet continues to shrink.

The situation means this remarkable period in cash management history could stretch for many more months, keeping yields attractive and assets growing. Supply of Treasuries might be a little tighter in the second quarter as the U.S. Treasury receives tax payments, but that should not have a material impact.

At the end of the month, yields on 1-, 3-, 6- and 12-month U.S. Treasuries were 5.40%, 5.40%, 5.33% and 5.00%, respectively.

90-Day Treasury Bill is a short-term debt instrument backed by the national government. These are used to collect immediate cash to meet outstanding obligations.

Any private investor can invest in a Treasury bill. The 90-Day Treasury Bill is a weighted average rate of the weekly auctions of 90-Day Treasury Bills.
