

Course Title:	Content Area:	Grade Level:	Credit (if applicable)
Grade 3 Science	Science	Grade 3	N/A
Course Description:			
<p>The performance expectations in third grade help students formulate answers to questions such as:</p> <p>What is typical weather in different parts of the world and during different times of the year? How can the impact of weather-related hazards be reduced? How do organisms vary in their traits? How are plants, animals, and environments of the past similar or different from current plants, animals, and environments? What happens to organisms when their environment changes? How do equal and unequal forces on an object affect the object? How can magnets be used?"</p> <p>Third grade performance expectations include PS2, LS1, LS2, LS3, LS4, ESS2, and ESS3 Disciplinary Core Ideas from the NRC Framework. Students are able to organize and use data to describe typical weather conditions expected during a particular season. By applying their understanding of weather-related hazards, students are able to make a claim about the merit of a design solution that reduces the impacts of such hazards. Students are expected to develop an understanding of the similarities and differences of organisms' life cycles. An understanding that organisms have different inherited traits, and that the environment can also affect the traits that an organism develops, is acquired by students at this level. In addition, students are able to construct an explanation using evidence for how the variations in characteristics among individuals of the same species may provide advantages in surviving, finding mates, and reproducing. Students are expected to develop an understanding of types of organisms that lived long ago and also about the nature of their environments. Third graders are expected to develop an understanding of the idea that when the environment changes some organisms survive and reproduce, some move to new locations, some move into the transformed environment, and some die. Students are able to determine the effects of balanced and unbalanced forces on the motion of an object and the cause and effect relationships of electric or magnetic interactions between two objects not in contact with each other. They are then able to apply their understanding of magnetic interactions to define a simple design problem that can be solved with magnets. The crosscutting concepts of patterns; cause and effect; scale, proportion, and quantity; systems and system models; interdependence of science, engineering, and technology; and influence of engineering, technology, and science on society and the natural world are called out as organizing concepts for these disciplinary core ideas. In the third grade performance expectations, students are expected to demonstrate grade-appropriate proficiency in asking questions and defining problems; developing and using models, planning and carrying out investigations, analyzing and interpreting data, constructing explanations and designing solutions, engaging in argument from evidence, and obtaining, evaluating, and communicating information. Students are expected to use these practices to demonstrate understanding of the core ideas.</p>			
Aligned Core Resources:		Connection to the <i>BPS Vision of the Graduate</i>	
N/A		<p>Collaboration</p> <ul style="list-style-type: none"> ● Exercise flexibility and willingness to be helpful in making necessary compromises to accomplish a common goal ● Assume shared responsibility for collaborative work and value the individual contributions made by each team member <p>Critical Thinking and Problem Solving</p> <ul style="list-style-type: none"> ● Collect, assess and analyze relevant information ● Reason effectively. ● Make sound judgements and decisions. Identify, define and solve authentic problems and 	

	<p>essential questions.</p> <ul style="list-style-type: none"> • Reflect critically on learning experience, processes and solutions. • Transfer knowledge to other situations

Standard Matrix

District Learning Expectations and Standards	Unit 1	Unit 2	Unit 3
3-PS2-1 Plan and conduct an investigation to provide evidence of the effects of balanced and unbalanced forces on the motion of an object.	X		
3-PS2-2 Make observations and/or measurements of an object’s motion to provide evidence that a pattern can be used to predict future motion.	X		
3-PS2-3 Ask questions to determine cause and effect relationships of electric or magnetic interactions between two objects not in contact with each other.	X		
3-PS2-4 Define a simple design problem that can be solved by applying scientific ideas about magnets.	X		
3-5-ETS1-3 Plan and carry out fair tests in which variables are controlled and failure points are considered to identify aspects of a model or prototype that can be improved.	X		
3-LS1-1 Develop models to describe that organisms have unique and diverse life cycles but all have in common birth, growth, reproduction, and death.		X	X
3-LS3-1 Analyze and interpret data to provide evidence that plants and animals have traits inherited from parents and that variation of these traits exists in a group of similar organisms.		X	
3-LS3-2 Use evidence to support the explanation that traits can be influenced by the environment.		X	
3-LS4-1 Analyze and interpret data from fossils to provide evidence of the organisms and the environments in which they lived long ago.		X	
3-ESS2-1 Represent data in tables and graphical displays to describe typical weather conditions expected during a particular season.			X
3-LS2-1 Construct an argument that some animals form groups that help members survive.			X
3-LS4-2 Use evidence to construct an explanation for how the variations in characteristics among individuals of the same species may provide advantages in surviving, finding mates, and reproducing.			X
3-LS4-3 Construct an argument with evidence that in a particular habitat some organisms can survive well, some survive less well, and some cannot survive at all.			X

3-LS4-4 Make a claim about the merit of a solution to a problem caused when the environment changes and the types of plants and animals that live there may change.			X
3-ESS2-2 Obtain and combine information to describe climates in different regions of the world.			X
3-ESS3-1 Make a claim about the merit of a design solution that reduces the impacts of a weather-related hazard.			X
3-5-ETS1-1 Define a simple design problem reflecting a need or a want that includes specified criteria for success and constraints on materials, time, or cost.			X
3-5-ETS1-2 Generate and compare multiple possible solutions to a problem based on how well each is likely to meet the criteria and constraints of the problem.			X

CCC	N/A																		
Essential Question(s):	Enduring Understanding(s):																		
<ul style="list-style-type: none"> • What makes objects move the way they do? • How do different strengths of forces affect motion? How does the direction of a force affect motion? • How do the properties of an object affect how an object moves when a force is applied? • How can some unseen forces that act on an object be investigated and explained? • What can magnetic forces do? How can we use the properties of magnets to solve a problem? • What forces caused this new case of odd motion? 	<ul style="list-style-type: none"> • Determine the effects of balanced and unbalanced forces on the motion of an object. • Identify the cause and effect relationships of electric or magnetic interactions between two objects not in contact with each other. • Apply understanding of magnetic interactions to define a simple design problem that can be solved with magnets.

Supporting Multilingual/English Learners		
Related <i>CELP standards:</i>	Learning Targets:	
An EL can construct grade appropriate oral and written claims and support them with reasoning and evidence.	I can use words and phrases acquired in conversations, reading, and being read to, and academic and domain specific words.	
An EL can conduct research and evaluate and communicate findings to answer questions or solve problems.	I can present findings using sources to answer questions.	
Lesson Sequence	Learning Target & Success Criteria	Assessments/ Resources
1	<p>I can make observations and generate questions to begin to understand the organism and its environment.</p> <ul style="list-style-type: none"> <input type="checkbox"/> I can understand what a paleontologist is. <input type="checkbox"/> I can make observations about the organism and its environment in my science notebook. <input type="checkbox"/> I can generate questions when observing the organism in my science notebook. 	<ul style="list-style-type: none"> ● Student Notebook (ongoing throughout unit) ● Class Summary Table (ongoing throughout unit)
2	<p>I can draw conclusions about an organism and its environment from examining fossil evidence.</p> <ul style="list-style-type: none"> <input type="checkbox"/> I can make observations about fossils. <input type="checkbox"/> I can make predictions about fossils and their environment based on fossil evidence. <p>I can draw conclusions about an organism and its environment from examining fossil evidence.</p> <ul style="list-style-type: none"> <input type="checkbox"/> I can explain the difference between a trace and a true fossil. <input type="checkbox"/> I can use fossil clues to make inferences about an organism and its environment <p>I can analyze true fossils and present day organisms in order to identify patterns in skull structures and teeth.</p> <ul style="list-style-type: none"> <input type="checkbox"/> I can make observations about what an animal eats based on their skull structures and teeth. <input type="checkbox"/> I can present a claim about Harper’s Fossil and support it with evidence based on patterns in skull structures and teeth. <p>I can analyze trace fossils in order to identify patterns in tracks.</p> <ul style="list-style-type: none"> <input type="checkbox"/> I can analyze trace fossils and explain/make predictions about their patterns. <input type="checkbox"/> I can describe what I learned using footprint trace fossils. <p>I can analyze trace fossils in order to identify patterns in tracks.</p> <ul style="list-style-type: none"> <input type="checkbox"/> I can analyze trace fossils and explain/make predictions about their patterns. <input type="checkbox"/> I can describe what I learned using footprint trace fossils. <p>I can research eggs to help me better understand Harpers Fossil Find.</p> <ul style="list-style-type: none"> <input type="checkbox"/> I can work in partnerships and research facts about eggs. <input type="checkbox"/> I can share what I learned with the group by Repeating and 	<ul style="list-style-type: none"> ● <i>Curious About Fossils</i> by Kate Waters ● <i>Fossils Tell of Long Ago</i> by Alikei ● <i>Tooth by Tooth</i> by Sara Levine ● What can Fossil Footprints Tell Us? article ● footprint puzzle ● Trace Fossil Scene student sheet ● 10 Facts About Dinosaur Eggs article

	<p>Rephrasing what I learned.</p> <p><input type="checkbox"/> I can use the information I learned about eggs to explain Harpers Fossil find.</p>	
3	<p>I can compare the appearance and function of inherited traits in fossils and present day organisms.</p> <p><input type="checkbox"/> I can identify at least one inherited trait from a fossil in the text that is similar to a present day organism.</p> <p><input type="checkbox"/> I can describe at least two similarities in the appearance of the trait in each organism.</p> <p><input type="checkbox"/> I can describe at least two similarities in the function of the trait in each organism.</p> <p>I can make inferences about a fossilized organism based on its traits.</p> <p><input type="checkbox"/> I can accurately match fossils to living organisms based on their traits.</p> <p><input type="checkbox"/> I can correctly infer where a fossilized organism lived and explain how the traits I observed in the fossil helped me draw my conclusion.</p> <p><input type="checkbox"/> I can explain how organisms changed over time based on their traits.</p> <p>I can define and identify “inherited traits”.</p> <p><input type="checkbox"/> I can accurately explain what “inheritance” means.</p> <p><input type="checkbox"/> I can explain the relationship between two organisms based on inherited traits.</p> <p>I can use fossil clues to make predictions about Harper's Fossil and its life.</p> <p><input type="checkbox"/> I can describe at least two ways that fossils give clues about how oviraptors lived.</p>	<ul style="list-style-type: none"> • <i>Fossil</i> by Bill Thompson • Fossil cards • <i>Grandmother Fish</i> by Jonathan Tweet • Oviraptor by Susan H. Gray
4	<p>I can observe and record data on the life cycle of a living organism.</p> <p><input type="checkbox"/> I can draw a picture and label what I notice.</p> <p><input type="checkbox"/> I can observe the organisms and record at least 3 things that I noticed or wondered about.</p> <p>I can compare and contrast the life cycles of different organisms.</p> <p><input type="checkbox"/> I can identify the stages of at least three different life cycles.</p> <p><input type="checkbox"/> I can identify at least two similarities and two differences between the life cycles of different organisms.</p> <p><input type="checkbox"/> I can make an inference about which life cycle Harper's fossil is most similar to and explain my thinking with evidence.</p>	<ul style="list-style-type: none"> • Observation Notebook (ongoing)
5	<p>I can predict what offspring would look like based on parent appearance.</p> <p><input type="checkbox"/> I can predict at least three traits that an offspring might inherit from its parents.</p> <p><input type="checkbox"/> I can identify traits in an offspring that were inherited from each parent.</p> <p>I can identify and define hereditary traits.</p> <p><input type="checkbox"/> I can explain what a hereditary trait is.</p>	<ul style="list-style-type: none"> • Discover a Crossbreed simulation • Heredity: Pass it On! By Rebecca Hirsh • Traits and Attributes by Natalie Hyde • <i>Inheritance of Traits: Why is my Dog Bigger than</i>

	<p><input type="checkbox"/> I can identify at least three traits that are hereditary in animals and plants.</p> <p>I can make inferences about an organism's life based on its inherited traits.</p> <p><input type="checkbox"/> I can make a claim about whether I believe the egg belongs to the oviraptor or another creature.</p> <p><input type="checkbox"/> I can identify at least three pieces of evidence related to inherited traits that support my claim.</p> <p><input type="checkbox"/> I can explain how my evidence connects to my claim.</p> <p>I can explain how inheritance affects an organism's appearance.</p> <p><input type="checkbox"/> I can identify traits that an offspring has inherited.</p> <p><input type="checkbox"/> I can explain the relationship between inherited traits and the way an organism looks.</p>	<p>Your Dog? by Jen Green</p> <ul style="list-style-type: none"> • Oviraptor by Jennifer Zeiger
6	<p>I can differentiate between inherited traits vs acquired traits.</p> <p><input type="checkbox"/> I can look at pictures and determine if it is an inherited or acquired trait.</p> <p><input type="checkbox"/> I can explain my thinking using evidence.</p> <p>I can explain if a trait is a learned behavior or influenced by the environment and how it affects the organism.</p> <p><input type="checkbox"/> I can watch the two videos and explain if the trait is learned or influenced by the environment.</p> <p><input type="checkbox"/> I can explain how the trait affects the organism.</p> <p>I can explain if a trait is a learned behavior or influenced by the environment and how it affects the organism.</p> <p><input type="checkbox"/> I can observe and analyze information about eggs to determine if egg color is an environmental or inherited trait.</p> <p><input type="checkbox"/> I can use what I learned about eggs to make a claim about whether the oviraptor is more closely related to a bird or a reptile.</p>	<ul style="list-style-type: none"> • Why Are Flamingoes Pink? video • Learned Behavior in Capuchin Monkeys video
