Re: Request for Funds

The Airport is being directed by LARA to install a tank meter on the 100 Low Lead tank as a monitoring device for leakage. To be clear, there is not leakage. The JetA tank already has a monitoring system.

A quote has been received from Northern Pump Service, who conduct our tank inspections and maintenance, in the amount of \$10,019.00 to order and install the meter (see attached estimate).

I request the amount be added to Line 295-595-931.001 Fuel Farm Maintenance, this amount will be added to the 4th Quarter CARES Reimbursement request.

Respectfully

Steven Smigelski
Airport Manager
