Tamkeen Manasia, a high school physics teacher, attended the TI N-Spire teacher workshop last week. As a part of this training, CHS is now a pilot site for the use of a variety of Vernier sensors, calculator-based rangers (CBRs) and TI handheld data loggers, all of which Tamkeen will be using with her physics classes this year. Tamkeen is currently teaching our newly developed Pre-AP conceptual physics course for freshmen who intend to enroll in IB biology as juniors and seniors. She will be using technology to increase the academic rigor of the conceptual physics course in order to meet the needs of freshmen students who are concurrently enrolled in advanced mathematics and plan to enroll in IB science courses in the future.
