LEVELING METHODS

- **Level under 4x4 runners only.**
- **Locate leveling material 12" from ends of runners and no more than 48" apart.**
- **Asphalt shingles should be used between 4x4 runners and blocks or treated lumber. Never use shingles in direct contact with ground.**
- **For best results and aiding in water drainage use gravel under each concrete block.**

LEVELING MATERIALS

- ☐ **Gravel**

LEVELING & SQUARING THE FLOOR FRAME (Not Included)

STOP!

LEVEL AND SQUARE FLOOR FRAME

Before attaching floor decking, it is important to level and square the floor frame.
A level and square floor frame is required to correctly construct your shed.

STOP!

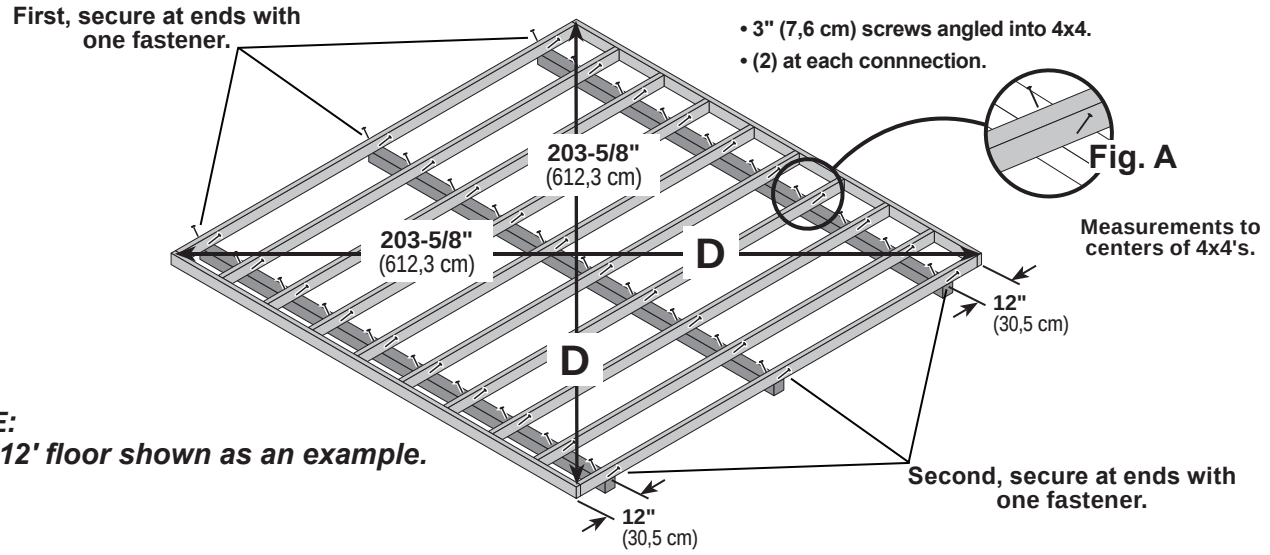
See page 10 for the preferred floor leveling method.

Use a level and ensure the frame is level before applying floor panels.

BEGIN

1 Check for frame squareness by measuring diagonally across the corners **(diagonal measurement D)**.
If the measurements are the same, the frame is square. Use the chart below to determine measurement D.

SHED SIZE	D
12' x 12'	203-5/8" (612,3 cm)
12' x 16'	240" (609,6 cm)
12' x 20'	279-7/8" (710,9 cm)
12' x 24'	322" (817,9 cm)



NOTE:
12' x 12' floor shown as an example.

4x4 runners are generally installed 12" (30,5 cm) from ends of floor frame and under any seams.
