A Delicate and Difficult Position

"most participants judged that if incoming data were consistent with economic growth picking up in the 2Q, labor market conditions continuing to strengthen, and inflation making progress towards the Committee's 2% objective, then it likely would be appropriate for the Committee to increase the target range for the Federal Funds rate in June"

This statement in the April minutes threw the equity and bond markets in a free-fall. The implied "threat" of a June increase in rates had the *bond gods* revolting. Bond futures had given only an 8% chance of a June increase and suddenly the FOMC was taking a progressively more hawkish stand on rates. The surprise had not come unexpectedly. Two outspoken voting members of the Committee (Williams and Lockhart) had broadcast the possibility with Lockhart clearly stating that a hike was on the June table. But the markets like cheap money and a strong dollar both of which could be jeopardized by a rate increase.

The talk from Committee members may also have been a warning to the markets which had reacted with extreme volatility at the last hike. The economy and the Committee need some certainty and stability and ultimately in May the futures market mindset came around to a current 30% chance of a hike. Although many traders and economists think that the better chance is July or September which would give more data on which to base the decision.

The Fed is in a delicate and difficult position and has pushed that position on to the markets. Markets and people want certainty and the data arriving daily is anything but. The conflicting data is compounded by a global situation which remains inconstant. We have as many positive signs in the economy as negative and until one side dominates the FOMC will remain reticent based on a "balance of risk".

The roller coaster ride is driven by jobs, inflation and the dollar. The side-show offered by US domestic politics and the global concerns for economic stability and rates only intensifies the situation.

Job data in May has been weak. Claims hit a 5-week high and the April data retraced the progress of the 1Q adding only 160,000 jobs and reduced the labor participation rate. Business and health services did add (65K and 44K) but retail and the federal government both cut jobs. The weak growth was balanced by several positives however. Wages and hourly earnings both rose. The 8% increase in wages looks meager but cumulatively takes us to a 2.5% hike YOY and the workweek lengthened to 34.5 hours.

Jobs have also been part of the campaign debate with Democrats arguing for a \$13-15/hr minimum wage. The impact of that is uncertain but as a given will hurt GDP as labor costs will soar.

Unemployment rate (seasonally adjusted)

Note: Cross-hatched area represents recession

Is the Balance Shifting to Positive?

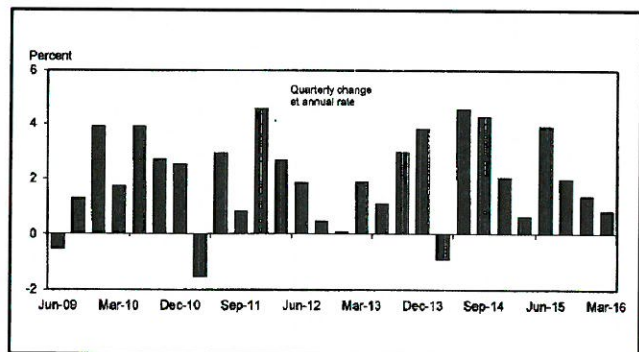

The second major factor roiling the markets has been oil as it has been for a year+. Alberta wildfires threatening refineries played a role in rising oil process, but hinged more directly on the major producers *allowing* oil to rise to save their own treasuries. An over-supply remains but oil finally reached \$50 before settling for the mid-\$40s – welcome news for Texas with talk of reopening rigs and therefore adding jobs. Such a move will also aid regional banks, which hold overdue debt from the energy sector.

Perhaps more importantly however regarding oil is its inflationary impact. The low oil prices have been a veritable *tax cut* for consumers but the increase will be a benefit more to the economy and boost inflation closer to the Committee's 2% goal. May saw an increase of 0.4% in CPI which, though small, is the biggest jump in 3 years. This will weigh heavily in rate changes.

Fortunately, the consumer has used this oil *tax break* to spend. The global uncertainty had driven her to save instead thereby spreading no benefit to the economy but in April consumer spending rose the most in 7 years! The consumer spent more this month on existing housing but less on autos and new housing. This reserve slows manufacturing's incentives to produce which is further weakened by the strong dollar. Even with that however GDP was revised up 0.8% on slightly better retail sales and residential investment.

The dollar itself did weaken slightly during the month which will aid our trade deficit situation. The Chinese yuan is officially pegged to the USD and China, with its economic challenges, wants to weaken the yuan to increase its own exports. Of course the Chinese could be weakening the yuan to prepare for a Fed rate hike also.

China reflects the global markets exactly. Emerging and developed economies are weak and struggling. Central banks continue to lower already *negative rates* to spur their markets.

The ECB is set to buy investment grade European corporate debt, which will drive more funds to the US with its higher rates. This move at least partially weakens the Fed's hikes. More funds chasing our debt only results in lower rates (higher prices).

The exit of Britain from the EU also weighs heavily internationally. This potential *Brexit* will throw economic and currency turmoil into already rocky markets. Stability must come from all directions not simply the US which has found its feet more quickly than any other nation. Continuing disquiet in Venezuela, Puerto Rico, Brazil and the Middle East are troubling and unsettling. It makes sense therefore that the FOMC "generally judged it appropriate to leave their policy options open and maintain the flexibility to make (the rate) decision" when and if conditions warrant.

Rates

- The 2-year Treasury Note continues to be the fulcrum for the curve with little change from a month earlier.
- The shorter end is moving up in yield as investors move out the curve on some level of certainty or hunting for yield. The rates have not moved materially since October when the market clearly anticipated the Federal Reserve's move to raise short term rates in December. Now they await June or July.
- The longer end has not moved appreciably from March since oil prices have remained in a range from \$35 to \$48 a barrel. However, as rates move or stay negative around the world, the longer end of the curve has stayed stubbornly below the last two quarters of 2015. This appears to be a definite move to find value in a negative interest rate world.
- All sectors of the US curve are waiting for a clearer picture from the Fed on the timing of the next rate hike. With the Fed then waiting on mounting good news from the economy, it is a month-to-month wait-and-see situation.
- CNBC surveyed economists continue to see August as the next possible move by the FOMC which modified their expectations to only two hikes in 2016.

Your Portfolio

As of May 31, 2016

- P&A constantly reviews your portfolio for optimal asset allocation and a controlled average maturity because a diversified portfolio can better adjust to volatile market conditions.
- The very short-term rates have moved up in the last quarter offering some opportunities for diversification – especially for those with access to commercial paper. Past one year there are many more alternatives as rates creep up.
- Banks remain *uninterested* in new deposits and municipal debt has become less attractive as the supply of new muni bonds dries up. Few outperform the agencies at this point in time.
- It is still time to reduce cash balances and stretch out longer and into the two year area if possible.
- The non-cash portion of your portfolio is yielding 0.73%.

Quarterly Investment Report
Ending May 31, 2016

A Delicate and Difficult Position

"most participants judged that if incoming data were consistent with economic growth picking up in the 2Q, labor market conditions continuing to strengthen, and inflation making progress towards the Committee's 2% objective, then it likely would be appropriate for the Committee to increase the target range for the Federal Funds rate in June"

This statement in the April minutes threw the equity and bond markets in a free-fall. The implied "threat" of a June increase in rates had the *bond gods* revolting. Bond futures had given only an 8% chance of a June increase and suddenly the FOMC was taking a progressively more hawkish stand on rates. The surprise had not come unexpectedly. Two outspoken voting members of the Committee (Williams and Lockhart) had broadcast the possibility with Lockhart clearly stating that a hike was on the June table. But the markets like cheap money and a strong dollar both of which could be jeopardized by a rate increase.

The talk from Committee members may also have been a warning to the markets which had reacted with extreme volatility at the last hike. The economy and the Committee need some certainty and stability and ultimately in May the futures market mindset came around to a current 30% chance of a hike. Although many traders and economists think that the better chance is July or September which would give more data on which to base the decision.

The Fed is in a delicate and difficult position and has pushed that position on to the markets. Markets and people want certainty and the data arriving daily is anything but. The conflicting data is compounded by a global situation which remains inconstant. We have as many positive signs in the economy as negative and until one side dominates the FOMC will remain reticent based on a "balance of risk".

The roller coaster ride is driven by jobs, inflation and the dollar. The side-show offered by US domestic politics and the global concerns for economic stability and rates only intensifies the situation.

Job data in May has been weak. Claims hit a 5-week high and the April data retraced the progress of the 1Q adding only 160,000 jobs and reduced the labor participation rate. Business and health services did add (65K and 44K) but retail and the federal government both cut jobs. The weak growth was balanced by several positives however. Wages and hourly earnings both rose. The 8% increase in wages looks meager but cumulatively takes us to a 2.5% hike YOY and the workweek lengthened to 34.5 hours.

Jobs have also been part of the campaign debate with Democrats arguing for a \$13-15/hr minimum wage. The impact of that is uncertain but as a given will hurt GDP as labor costs will soar.

Note: Cross-hatched area represents recession

Is the Balance Shifting to Positive?

The second major factor roiling the markets has been oil as it has been for a year+. Alberta wildfires threatening refineries played a role in rising oil process, but hinged more directly on the major producers *allowing* oil to rise to save their own treasuries. An over-supply remains but oil finally reached \$50 before settling for the mid-\$40s – welcome news for Texas with talk of reopening rigs and therefore adding jobs. Such a move will also aid regional banks, which hold overdue debt from the energy sector.

Perhaps more importantly however regarding oil is its inflationary impact. The low oil prices have been a veritable *tax cut* for consumers but the increase will be a benefit more to the economy and boost inflation closer to the Committee's 2% goal. May saw an increase of 0.4% in CPI which, though small, is the biggest jump in 3 years. This will weigh heavily in rate changes.

Fortunately, the consumer has used this oil *tax break* to spend. The global uncertainty had driven her to save instead thereby spreading no benefit to the economy but in April consumer spending rose the most in 7 years! The consumer spent more this month on existing housing but less on autos and new housing. This reserve slows manufacturing's incentives to produce which is further weakened by the strong dollar. Even with that however GDP was revised up 0.8% on slightly better retail sales and residential investment.

The dollar itself did weaken slightly during the month which will aid our trade deficit situation. The Chinese yuan is officially pegged to the USD and China, with its economic challenges, wants to weaken the yuan to increase its own exports. Of course the Chinese could be weakening the yuan to prepare for a Fed rate hike also.

China reflects the global markets exactly. Emerging and developed economies are weak and struggling. Central banks continue to lower already *negative rates* to spur their markets.

The ECB is set to buy investment grade European corporate debt, which will drive more funds to the US with its higher rates. This move at least partially weakens the Fed's hikes. More funds chasing our debt only results in lower rates (higher prices).

The exit of Britain from the EU also weighs heavily internationally. This potential *Brexit* will throw economic and currency turmoil into already rocky markets. Stability must come from all directions not simply the US which has found its feet more quickly than any other nation. Continuing disquiet in Venezuela, Puerto Rico, Brazil and the Middle East are troubling and unsettling. It makes sense therefore that the FOMC "generally judged it appropriate to leave their policy options open and maintain the flexibility to make (the rate) decision" when and if conditions warrant.

Rates

- The 2-year Treasury Note continues to be the fulcrum for the curve with little change from a month earlier.
- The shorter end is moving up in yield as investors move out the curve on some level of certainty or hunting for yield. The rates have not moved materially since October when the market clearly anticipated the Federal Reserve's move to raise short term rates in December. Now they await June or July.
- The longer end has not moved appreciably from March since oil prices have remained in a range from \$35 to \$48 a barrel. However, as rates move or stay negative around the world, the longer end of the curve has stayed stubbornly below the last two quarters of 2015. This appears to be a definite move to find value in a negative interest rate world.
- All sectors of the US curve are waiting for a clearer picture from the Fed on the timing of the next rate hike. With the Fed then waiting on mounting good news from the economy, it is a month-to-month wait-and-see situation.
- CNBC surveyed economists continue to see August as the next possible move by the FOMC which modified their expectations to only two hikes in 2016.

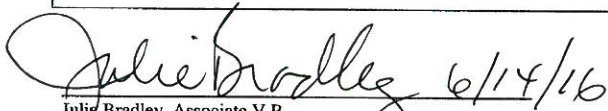

End of Month Rates - Full Yield Curve - Fed Funds to 30yr

Your Portfolio

As of May 31, 2016

- P&A constantly reviews your portfolio for optimal asset allocation and a controlled average maturity because a diversified portfolio can better adjust to volatile market conditions.
- The very short-term rates have moved up in the last quarter offering some opportunities for diversification – especially for those with access to commercial paper. Past one year there are many more alternatives as rates creep up.
- Banks remain *uninterested* in new deposits and municipal debt has become less attractive as the supply of new muni bonds dries up. Few outperform the agencies at this point in time.
- It is still time to reduce cash balances and stretch out longer and into the two year area if possible.
- The non-cash portion of your portfolio is yielding 0.73%.
