EXECUTIVE SUMMARY

Pinyon Environmental, Inc. (Pinyon), has completed a Phase I Environmental Site Assessment (ESA) of the property located at I Street, Umatilla, Oregon (Site). This Phase I ESA was completed in accordance with the ASTM “Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process E 1527-21,” and in accordance with the U.S. Environmental Protection Agency’s (EPA’s) All Appropriate Inquiry (AAI) guidelines. The purpose of the Phase I ESA was to identify potential soil and/or groundwater contamination at the Site due to a release of hazardous substances or petroleum products.

Pinyon has not identified recognized environmental conditions (RECs) for the Site.

Pinyon has not identified controlled recognized environmental conditions (CRECs) for the Site.

Pinyon has not identified historical recognized environmental conditions (HRECs) for the Site.

At this time, no additional investigations are recommended.

Project Summary Table

Report Section		REC	CREC	HREC	Other Environmental Considerations	Comments
3.2.1	Hazardous Substances and Petroleum Product Use and Product Containers				✓	Herbicides and pesticides are used at the Site in the area of the athletic fields and stored off-Site. No herbicide or pesticide containers were observed at the Site.
3.2.2	Equipment Potentially Containing Polychlorinated Biphenyls (PCBs)				✓	A pad-mounted transformer, located south of the football field along the Umatilla River, was damaged during a 2020 flooding event; the PCB content of the previous transformer was not known. No staining or strained vegetation was observed in the area of the transformer. The transformer was replaced since the flood and was used in association with the irrigation pump.
3.2.3	Areas of Fill or Solid Waste Disposal				✓	The eastern portion of the Site, adjacent to the mobile home park, contained solid waste littered along the hillside. Solid waste included metal fencing and empty plastic containers. An abandoned gravel pit was located north of the eastern portion of the Site. A former rail spur entered the Site from the northeast in the vicinity of the gravel pit. The rail spur was reportedly still in place at the Site. A pile of demolition debris from a former school was located adjacent to the

Report Section		REC	CREC	HREC	Other Environmental Considerations	Comments
						gravel pit. The gravel pit was also used as a burn pit for untreated and unpainted wood.
3.2.4	Waste Water or Storm Water				✓	No waste water or stormwater structures were observed at the Site. A flood along the Umatilla River occurred circa 2020, which inundated much of the Site. A berm extending along much of the southern Site boundary was constructed in an effort to prevent future flooding.

1.0 INTRODUCTION

The purpose of the Phase I Environmental Site Assessment (ESA) is to evaluate the potential for soil and/or groundwater contamination at the Site, due to a release of hazardous substances or petroleum products. This Phase I is being completed to satisfy requirements for the renewal of the Site's lease to Umatilla School District (USD).

1.1 Site Location

Site: Umatilla School District Athletic Fields and Natural Area (Appendix A)
Address: I Street
City, State Umatilla, Oregon

1.2 Purpose

The purpose of this assessment was to perform an evaluation for the potential presence of hazardous substances and/or petroleum products (otherwise known as "Recognized Environmental Conditions, Controlled Recognized Environmental Conditions, or Historical Recognized Environmental Conditions") in, on, or at the Site.

Recognized environmental conditions (RECs) are defined conditions by ASTM as the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: (1) due to release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment.

A controlled recognized environmental condition (CREC) is defined by ASTM as a REC resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority, with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls.

A historical recognized environmental condition (HREC) is defined by ASTM as a past release of any hazardous substance or petroleum products that has occurred in connection with the property and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the property to any required controls. The terms REC, CREC, and HREC do not include de minimis conditions that do not present a threat to human health or the environment and that would not be the subject of an enforcement action if brought to the attention of appropriate environmental agencies.

This report is made pursuant to the United States Environmental Protection Agency All Appropriate Inquiry ruling into the prior ownership and uses of the Site, consistent with good commercial and customary practices appropriate to a commercial purchaser or fee owner of real property, and is intended to permit the user to satisfy one of the requirements to qualify for landowner liability protection.

This Environmental Site Assessment (ESA, also referred to as the Phase I report) meets the requirements of the ASTM “Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process E 1527-21. The report was formatted for reading ease and does not follow the suggested ASTM format; however, it does include all components of the ASTM standard.

1.3 Scope of Services

This report presents the findings, opinions, and conclusions obtained during completion of the Phase I ESA. The scope of services for the project are presented below.

1.3.1 Site Reconnaissance

A reconnaissance survey of the Site and surrounding areas was completed on July 12, 2023, to evaluate present conditions (Appendix B).

1.3.2 Records Review

The historical use and development of the Site and surrounding area was evaluated by reviewing the following standard historical sources, when reasonably ascertainable:

- Aerial photographs reasonably available from public sources (Appendix C)
- Local street directories (Appendix D)
- Fire insurance maps, if available (Appendix E)
- United States Geological Survey (USGS) topographic maps (Appendix F) and USGS TopoView website
- Property tax assessment files (Appendix G)
- Building department records, if available (Appendix H)
- Zoning and land use records
- A review of the compliance history of the Site, and of certain adjacent properties, as identified by the Agency Database Report (Appendix I).
- A review of records reasonably available from appropriate federal, state, and local regulatory agencies for documented soil and/or groundwater contamination investigations (if applicable) conducted at the Site and the vicinity, as defined by the ASTM standard.
- A review of reported oil and gas activity and water wells on and near the Site (Appendix J)

- A review of information regarding the physical settings of the Site, including:
 - The current USGS 7.5-minute topographic map
 - Geology information published by the USGS and reported by ERIS (Appendix J)
 - Soil information published by the Natural Resource and Conservation Service (NRCS)
 - Groundwater information published by the USGS

1.3.3 Interviews

The information obtained has been incorporated into the relevant report sections. Additionally, the user provided information, based on the specialized or actual knowledge, regarding environmental liens, activity use limitations, relationship of the purchase price to the fair market value, and known recognized environmental conditions. The user also stated the reason for completion of the Phase I ESA. In addition, Pinyon contacted agencies and municipalities who may have knowledge about the Site and surrounding areas.

ESA User	Robin C. Norris, U.S. Army Corps of Engineers (USACE) Robin.C.Norris@usace.army.mil	08/23/23

1.3.4 Additional Services

Services beyond those required by ASTM were completed, including:

- A review of radon information published by the United States Environmental Protection Agency (EPA)
- A review of floodplain information published by the Federal Emergency Management Agency (FEMA) and reported by ERIS (Appendix J)
- Evaluation to identify potential wetlands on the Site and reported by ERIS (Appendix J)
- An evaluation of the potential for asbestos-containing building materials and lead-based paint in the building, if applicable

1.3.5 Report

This report presents the findings, opinions, and conclusions obtained during completion of the above scope of services.

2.0 PROJECT AND SITE INFORMATION

2.1 Project Overview and General Site Information

The project overview and general Site information are outlined in the table below.

General Site and Project Overview	
Project Overview	
Date of Task Order:	September 29, 2022
Work Authorized By:	Carl R. Schmurr
General Site Information	
Address	I Street
City, State	Umatilla, Oregon
County	Umatilla
Intersection	None
Other Roads	L Street
Assessor's Number	Portion of 5N2817-00-00500, 5N2817-BD-11800
Current Site Owner	United States Army Corps of Engineers
Size of Site	Approximately 41 acres
Status	Developed
Current Zoning	Medium Density Residential/Community Service (R-2/CS)

Site Utility Connections	
Utility Type	Provider
Water	City of Umatilla
Sewage	City of Umatilla
Electric	Pacific Power
Gas	Not Connected

2.2 Site Reconnaissance Information

Findings from the Site reconnaissance are presented below.

Date of Site Visit:	July 12, 2023
Personnel:	Daniel Jennings, Pinyon
Escorts:	Vincent Stefani, Umatilla School District
Methodology:	Viewed interior of Site buildings and exterior areas of Site; viewed adjacent areas from Site and public right-of-way
Inaccessible Areas:	The southeast portion of the Site had areas of thick vegetation.
Limiting Conditions:	None

2.3 Current Site Use

The Site is used by Umatilla School District for recreation and athletic fields. A football field, track, and baseball field were located on the northwestern portion of the Site. Storage sheds, dugouts, announcing booths, restrooms, and a concession stand were used in association with the athletic fields, as well as two shipping containers for equipment storage. A batting cage structure contained netting for an expandable batting cage, located north of the baseball field. The southeastern portion of the Site was largely vegetated with trails and a cross-country course. An irrigation pump extended into the Umatilla River from the southern property boundary, between the football and baseball fields.

2.3.1 Building/Structures on Site and Their Use:

Storage sheds, dugouts, announcing booths, restrooms, and a concession stand were used in association with the athletic fields. The buildings were located on the northwest portion of the Site, near the athletic fields.

2.3.2 Interior and Exterior Construction Materials

An approximately 450 square foot (sf) structure containing an announcing booth, restrooms, and an equipment room below the announcing booth was located north of the football field. The announcing booth and restrooms were constructed with wooden walls, a drop ceiling, and cement floors. The equipment room was constructed of wooden walls with a cement floor and ceiling.

An approximately 750 sf equipment storage shed was located west of the baseball field. The equipment storage shed contained track and field equipment and was constructed with metal walls and roof with a gravel floor.

An approximately 48 sf storage shed was located northeast of the equipment storage shed. The storage shed contained bases and landscaping equipment at the time of the Site visit. The shed previously contained minor amounts of pesticides, however, no staining or odors were noted. The shed was constructed of wooden walls, a metal roof, and a cement floor.

An approximately 80 sf concession stand was located north of the storage sheds. The concession stand contained a propane grill, a refrigerator, tables, and kitchen supplies. The stand was constructed of wooden walls, a metal roof, and a cement floor.

Two dugouts, constructed of masonry block walls and metal roofs, were located at the baseball field. A batting cage structure, located north of the baseball field, was constructed of masonry block and fencing walls and a metal roof. The batting cage structure contained netting which could be extended along a wire for batting cages.

3.0 SITE DESCRIPTION

This section of the report discusses the Site; including but not limited to physical attributes, observations made during the Site visit, other environmental concerns, Site history, interviews, and records researched.

3.1 Physical Setting

3.1.1 Topography

The topography of the Site is gently sloped toward the south (Figure 1).

3.1.2 Elevation

The elevation at the Site is approximately 279 feet above mean sea level (msl) (Figure 1).

3.1.3 Surficial Soil

Surficial soil at the Site consists primarily of the Quincy loamy fine sand, 5 to 25 percent slopes, and Xerofluvents, 0 to 3 percent slopes (NRCS, 2023). The Quincy loamy fine sand is described as a loamy fine sand to a depth of four inches where a fine sand is present to a depth of 60 inches. The Xerofluvents consist of cobbly loam from 0 to 3 inches, then a very cobbly loam from 3 to 7 inches, overlying an extremely gravelly sandy loam from 7 to 22 inches, and finally an extremely gravelly sand to 60 inches

3.1.4 Geology

Surficial geology at the Site consists of Quaternary-Age alluvial and glaciolacustrine eolian deposits (Appendix J). The alluvium unit is described as mostly unconsolidated silt, sand, and gravel.

3.1.5 Nearest Surface Water Body

The Umatilla River extends along the southern Site boundary (Figure 1).

3.1.6 Groundwater Conditions

Groundwater wells located at the Site had recorded groundwater between 39 to 71 feet bgs (Appendix J). Groundwater wells were not observed during the Site visit. Groundwater elevation is likely influenced by flow in the Umatilla River.

3.2 General Site Environmental Conditions

During the Site visit, Site uses and conditions, as defined by the ASTM Standard (ASTM, 2021, Section 9), were noted (Summary of General Site Observations). Where observations indicated the potential presence of recognized environmental conditions, additional discussion is presented in the sections immediately following the table.

Summary of General Site Observations	
Potential Environmental Concern	Observed Present?
Hazardous substances and petroleum products use	Yes
Hazardous substances and petroleum product containers	No
Storage Tanks	No
Odors	No
Pools of Liquid	No
Drums	No
Potential Polychlorinated Biphenyls (PCBs)	Yes
Heating and Cooling	No
Stains and Corrosion	No
Drains and Sumps	No
Pits, Ponds and Lagoons	No
Exterior Stained Soil or Pavement	No
Stressed Vegetation	No
Areas of fill or solid waste disposal	Yes
Unidentified substance containers	No
Waste water or Storm water	Yes
Wells	No

Summary of General Site Observations	
Potential Environmental Concern	Observed Present?
Septic System	No

3.2.1 Hazardous Substances and Petroleum Product Use and Product Containers

Herbicides and pesticides are used at the Site in the area of the athletic fields and stored off-Site. No herbicide or pesticide containers were observed at the Site.

3.2.2 Equipment Potentially Containing Polychlorinated Biphenyls (PCBs)

A pad-mounted transformer, located south of the football field along the Umatilla River, was damaged during a 2020 flooding event; the PCB content of the previous transformer was not known. It is likely that the transformer was installed circa 1981, after PCBs were banned by the EPA. No staining or strained vegetation was observed in the area of the transformer. The transformer was replaced since the flood and was used in association with the irrigation pump.

3.2.3 Areas of Fill or Solid Waste Disposal

The eastern portion of the Site, adjacent to the mobile home park, contained solid waste littered along the hillside. Solid waste included metal fencing and empty plastic containers.

An abandoned gravel pit was located off-Site, to the north of the eastern portion of the Site. A rail spur entered the Site from the northeast in the vicinity of the gravel pit. The rail spur was reportedly still in place at the Site, though was not observed during the Site visit. A pile of demolition debris from a former school was located adjacent to the gravel pit. The school was demolished circa 2000 and likely underwent asbestos abatement as part of the process. The gravel pit was also used as a burn pit for untreated and unpainted wood.

3.2.4 Waste Water or Storm Water

No waste water or stormwater structures were observed at the Site. A flood along the Umatilla River occurred circa 2020, which inundated much of the Site. A berm extending along much of the southern Site boundary was constructed in an effort to prevent future flooding.

3.3 Other Environmental Conditions

In addition to features defined by the ASTM Standard, Pinyon evaluated several non-scope issues. Non-scope issues that were evaluated for the Site are discussed below.

Environmental Condition	Evaluated for Site
Radon Gas	✓
Wetlands	✓
Floodplains	✓
Asbestos in Structures	✓
Lead-Based Paint	✓

3.3.1 Radon Gas

Radon-222 (radon) is a naturally-occurring gas which is prevalent in certain areas of the country. The USGS conducted a radon survey in 1993 of Umatilla County (USGS, 1993). A total of 40 measurements were obtained in Umatilla County. Eight measurements exceeded the EPA action level of 4 picoCuries per liter (pCi/L). The maximum concentration detected was 14.0 pCi/L; the average concentration was 2.6 pCi/L.

3.3.2 Wetlands

Areas of freshwater emergent wetlands occur along the southwestern Site boundary along Umatilla River. An area of freshwater forested/shrub wetlands is mapped across much of the southeastern portion of the Site.

3.3.3 Floodplains

Approximately half of the Site is located within flood zone A and the other half is within unshaded flood zone X (Appendix J). Flood zone A, mapped across much of the southern half of the Site along Umatilla River, is an area determined to be within the 100-year floodplain. Flood zone X, mapped across much of the northern half of the Site, is an area determined to be above the limits of the 500-year flood.

3.3.4 Asbestos in Structures

Structures at the Site were largely constructed with non-suspect asbestos containing materials (ACM), including masonry block and wooden walls, cement or gravel floors, and metal roofs. Acoustic ceiling tiles and wall paneling in the announcing booth may contain suspect adhesives.

3.3.5 Lead-Based Paint

Based on construction date of the buildings (circa 1980s), it is not likely lead-based paint is present at the building. Lead-based paint sampling was not included as a part of the scope of services for the Phase I ESA.

3.4 Site History

The following resources were used in developing the Site history.

Historical Records Review										
Source	Pre - 1940s	1940	1950	1960	1970	1980	1990	2000	2010	2020
Aerial Photographs	-	-	1952	1960	1970, 1977	1981	1991, 1996	2001, 2003, 2004, 2005, 2006, 2009	2011, 2012, 2014, 2016	2020, 2022
City Directories	-	-	-	-	-	-	1998	2000, 2003, 2008	2012, 2016	2020, 2022
Topographic Maps	-	-	-	1962	1970	1987	1993	-	2014, 2017	2020
Building Department Records	-	-	-	-	-	-	-	-	2019	2020

Site Past Use and History

From	To	Site Past Use and History	Source(s)
1952	1960s	The Site was acquired in the 1960s by USACE. Prior to USACE ownership, the Site was used for cattle grazing and open space.	Previous Reports, Aerial Photographs, Topographic Maps
1960s	1974	The Site remained largely vacant during this time. Walking trails appeared circa 1970.	Previous Reports, Aerial Photographs, Topographic Maps
1974	2023	The Site has been leased by USD since 1974. By 1977, the athletic fields were under construction, with the football field completed in 1981 and the baseball field completed in 1996. Few changes were made to the Site between 1977 and before the 2020 flood. Repairs to the athletic fields and irrigation pump, and the construction of the stormwater berm along the southern Site boundary occurred after the 2020 flood.	Previous Reports, Aerial Photographs, Topographic Maps, Interviews

The ASTM Standard requires that Site use be documented to 1940, or first developed use, whichever is earlier. For the purpose of the ASTM Standard, developed use includes agricultural use and placement of fill dirt. Pinyon can document that the Site was used for agricultural use in 1952, which does not establish first use. Pinyon researched all reasonably attainable data for the Site, and it is unlikely that additional information exists prior to 1952 to the level of detail needed to evaluate use. All standard sources were either used or considered, as discussed in Section 6.5. This constitutes data failure, a form of a data gap.

3.5 Interviews

In completing this Phase I ESA, Pinyon contacted state and/or local government officials and individuals who may have knowledge about the Site. Pertinent information regarding the interviews conducted is discussed below.

3.5.1 Interviews

Pinyon interviewed Vincent Stefani, of the Umatilla School District, to obtain additional information regarding the Site; that information is provided below.

Interview Response(s)	
Interview Question	Response/Discussion
What sort of business operations are conducted at the Site? How is the Site used?	Football games, baseball games, track meets
How long have you been/were you connected with the Site? From when to when?	2013-present
What are the ages of the buildings or structures on the Site?	1980s-present
Who provides the utilities?	Elect: Pacific Power Gas: None Water: City of Umatilla Sewer: City of Umatilla
Does the Site have a water well or septic tank?	Water Well
Is there an electrical transformer at the Site?	Yes
Are there floor drains? Where do they discharge to? Is there a sand trap?	No
What type of heating system is present at the Site?	NA
Do you know of any spills, leaks, or environmental incidents that have occurred at the Site?	No
Are there any underground storage tanks or above-ground storage tanks currently in use at the Site? Were there any in the past?	No
Do you/did you store or use any petroleum products (gasoline, oils), chemicals, cleaners, solvents, paints etc. at the Site?	No

Interview Response(s)	
Interview Question	Response/Discussion
Are there any wastes generated at the Site (including solid waste)? If yes, how are they disposed of? Is there a dumpster on the Site?	Trash is taken up to the school
Who was or were the prior owner(s)?	NA
What did the prior owner use the Site for?	NA
Do you know the former or historical use of the surrounding properties?	No
Have any adjacent properties been used as a gas station, auto repair shop, commercial printer, dry cleaner, photo development lab, junkyard, or landfill?	Not sure
Have you ever noticed any runoff, wastewater or stormwater entering the Site from adjacent properties, or noticed any unusual odors?	No
Has fill dirt been brought onto the Site? If yes, where?	Not that I know of
Are there any liens, violations, administrative actions, or lawsuits relating to environmental issues at the Site?	No
Have you completed an environmental assessment for the Site? Has anyone completed a Phase 1 or other type of environmental assessment of the Site?	Yes
Are there any pertinent environmental documents available for review?	No
From an environmental assessment standpoint, are there any other potential conditions that you think we should know about, either on Site or from a neighboring property?	No

3.5.2 Previous Environmental Reports

A Preliminary Assessment Screening was conducted for the Site in 1999. The report provided a brief Site history and contemporary Site conditions. In 1999, six large dumpsters of solid waste were removed from the eastern portion of the Site. The report attributed the solid waste to the mobile home park adjacent to the east of Site. The solid waste included furniture, tires, metal, wood, a water heater, empty plastic containers, a bike, a 12-volt vehicle battery, and various paper refuse. No evidence of stained soil or unusual pooled liquid was observed during the removal of the solid waste. The report provided a brief review of records reviews, which identified a decommissioned underground storage tank (UST) owned by USD; otherwise, no facilities of concern were noted.

3.5.3 User Supplied Information

The user of this report, United States Army Corps of Engineers, Portland District, supplied information to Pinyon regarding the Site and the planned transaction ([User Questionnaire Appendix](#)).

User Question	User response and Provided Information
What is the purpose of the Phase 1 ESA? Is it for a loan?	USACE renewal of lease with Umatilla School District.
What is the planned use of the Site?	Other
Did a search of recorded land title records identify any environmental liens filed or recorded against the Site under federal, tribal, state, or local law?	NA - federally owned property.
Did a search of recorded land title records identify any activity use limitations (AULs), such as engineering controls, land use restrictions, or institutional controls the Site under federal, tribal, state, or local law?	NA - federally owned property.
Do you have any specialized knowledge or experience related to the Site or nearby properties?	None other than file records for the Site.
Does the price for this property reasonably reflect the fair market value of the Site? Note that this question does not require an appraisal of the property, but is based on purchase the experience of the user.	NA, Federal Government already owns the property

User Question	User response and Provided Information
If you answered “no” to the above question, have you considered whether the lower purchase price is because contamination is known or believed to be present at the Site?	NA
Do you know the past uses of the Site?	Based on previous Preliminary Assessment Screening (PAS), the land was used for open space and cattle grazing.
Do you know of specific chemicals that are present or once were present at the Site?	No
Do you know of spills or other chemical releases that have taken place at the Site?	No
Do you know of any environmental cleanups that have taken place at the Site?	No
Based on your knowledge and experience related to the Site, are there any obvious indicators that point to the presence or likely presence of releases at the Site?	No

3.6 Site Records Review

Pinyon reviewed the agency database report ([Agency Database Report](#)) and records relating to releases of hazardous substances and/or petroleum products at the Site, as applicable.

Database Reports	Federal/Tribal	State	Local
Database Records Is the Site listed on an agency database for a reason other than a reported release or spill of petroleum products, hazardous wastes, or hazardous substances?	No	No	No

Database Reports	Federal/Tribal	State	Local
Past Spills/Releases Is the Site listed on an agency database for a reported or suspected release or spill of petroleum products, hazardous wastes, or hazardous substances?	No	No	No

3.7 Federal, State, and/or Local Agency Interview and/or File Review for the Site

3.7.1 United States Environmental Protection Agency (EPA)

Based on a review of the database report, records at the EPA were not reviewed for the Site.

3.7.2 Oregon Department of Environmental Quality (ODEQ)

The ODEQ did not identify records for the Site.

3.7.3 Umatilla Environmental Health Department

The Umatilla Environmental Health Department did not identify records for the Site.

3.7.4 Umatilla Rural Fire Protection District

A request was submitted to Umatilla Rural Fire Protection District for records pertaining to the Site. At the time of this report, Pinyon has not received a response.

4.0 ADJACENT NEARBY PROPERTIES

Pinyon evaluated the adjacent and nearby properties for zoning, use, and the potential to impact the soil, soil vapor, and/or groundwater at the Site.

4.1 General Off-Site Description

Adjacent Property Zoning and Use		
Adjacent Property Location Relative to the Site	Zoning	Use
North	R-2/CS, Downtown Residential (DR), Downtown Commercial (DC), Downtown Transitional (DT)	USD, residential, gravel pits
East	R-2, Light Industrial (M-1)	Sunset Mobile Home Park, Simplot Growers Solutions, Umatilla Pit
South	Residential Plan (R)	Agricultural, residential
West	R-2/CS, DR	Residential

General Regional Property Use: The properties in the Site vicinity are comprised of residential areas, USD, and agricultural areas.

4.2 Historical Adjacent Property Uses

The town of Umatilla, including USD, have existed to the north of the Site since before 1952. Development occurred in the town through 1991. The mobile home park to the east of the Site was developed circa 1970. Redevelopment of the USD property immediately north of the Site occurred circa 2001, resulting in the debris pile being deposited in the gravel pits. Minor development in the town of Umatilla continues to the present.

4.3 Off-Site Database Records Review

The Agency Database Report (Appendix I) provides a summary of facilities listed in agency databases, located within the approximate minimum search distance, specified in the ASTM standard. In order to identify if a release at an off-Site facility is a REC for the Site, Pinyon reviewed records relating to releases of hazardous substances and/or petroleum products for the following facilities (additional discussion below):

- Unnamed Gravel Pits - ERIS ID 1 and 2
- C&B Livestock, Inc. - Powerline Road - ERIS ID 3
- Leathers Oil Company - 700 G Street - ERIS ID 7
- JR Simplot dba Simplot Growers Solutions - 1013 Old River Road - ERIS ID 8
- 7th and Old River Road - ERIS ID 16
- Wilbur-Ellis Company - 711 River Road - ERIS ID 24

The records for those facilities located within the approximate minimum search distance, found in the Agency Database Report, but not listed above, were not reviewed. This was based on a variety of factors including, but not limited to: the overall setting in which the Site is located, potential depth to groundwater and groundwater flow direction, existing or past uses of the surrounding properties, the potential migration distance of hazardous substances and/or petroleum products in the area, and distance from the Site.

4.3.1 Unnamed Gravel Pits - ERIS ID 1 and 2

Two unnamed gravel pits were mined to the north of the Site boundary. The pits are now used to store landscaping materials, a burn pit, and a construction debris pile. The landscaping materials were stored in piles and included gravel and mulch. The burn pit was reportedly used to burn untreated and unpainted wood. The construction debris pile contained debris from a former school building which was demolished in the late 1990s. Hazardous materials and petroleum products were not observed in the area of the gravel pits during the Site visit.

The rail spur extending along the northeastern Site boundary was likely used in association with the gravel pits.

4.3.2 C&B Livestock, Inc. - Powerline Road - ERIS ID 3

According to reviewed records, this facility is actually located greater than 1 mile south of the Site.

4.3.3 Leathers Oil Company - 700 G Street - ERIS ID 7

This facility is located 511 feet to the west of Site. In August 1999, four underground storage tanks (USTs) were removed from the facility. Impacts to surrounding soil were observed during the UST removal. Approximately 200 cubic yards (cy) of petroleum contaminated soil was removed from the facility during initial investigation, followed by an additional 13.22 tons. Residual soil concentrations were below established standards. ODEQ issued a No Further Action determination (NFA) on March 3, 2003.

4.3.4 JR Simplot dba Simplot Growers Solutions - 1013 Old River Road - ERIS ID 8

This facility is located 545 feet to the east and upgradient of Site. The facility has numerous aboveground storage tanks (ASTs) containing various pesticides, herbicides, and other agricultural chemicals.

Approximately 1,000 gallons of herbicide were released at the facility on April 22, 2008. Impacted soil was excavated (approximately 275 cy) until concerns regarding the building's foundation impeded further excavation. Residual soil impacts were above EPA residential regional screening levels (RSLs). The herbicide's main constituent, s-ethyl dipropylthiocarbamate, has a half life of around 30 years. The release was investigated and remediated under the Voluntary Cleanup Program (VCUP). Since groundwater impacts were below EPA standards and the impacted soil exposure pathway was not complete, ODEQ issued an NFA and allowed the soil to remain in place while naturally attenuating.

A release of 5,000 to 8,000 gallons of ammonium thiosulfate fertilizer occurred in December 2003. Limited information on this release was available but indicated that it was addressed during the 2008 cleanup.

4.3.5 7th and Old River Road - ERIS ID 16

This facility is located 632 feet to the east-northeast of Site. A release occurred on October 16, 2010, when a semi-truck carrying 1,000 pounds (lbs) of hazardous materials overturned, spilling 480 lbs of hydrogen peroxide mix and 420 gallons of flammable paint mixture, impacting surrounding soil. The status of the release was archived with no update regarding potential cleanup efforts.

4.3.6 Wilbur-Ellis Company - 711 River Road - ERIS ID 24

This facility is located 812 feet to the east-northeast of Site. The facility operated as an agricultural chemical supplier between 1975 and 2004. A complaint was filed with ODEQ on July 15, 1986, alleging that during utility repairs, groundwater encountered in the vicinity of the facility had a yellow color and smelled like fertilizers or pesticides. A subsurface investigation was conducted between 2004 and 2006. Soil borings were installed to a depth of 12 feet bgs, targeting areas with high potential for a release. Groundwater was not encountered during the investigation and was noted as ranging 30 feet to 100 feet bgs in the Umatilla area. A total of 40 soil samples were collected and analyzed for herbicides, pesticides, metals, and hydrocarbons. Analytes were below established standards and ODEQ issued an NFA on January 4, 2007. The Site currently operates as R+L Carriers, a trucking company.

4.3.7 Additional Facilities

Groundwater to the north of 7th Street is inferred to flow generally north, toward the Columbia River, based on review of topographic maps and observations made during the Site visit. However, local flow regimes could not be evaluated as part of this assessment. The following facilities within 1/8-mile of the Site were reviewed, with the understanding that groundwater beneath these facilities likely does not flow toward the Site:

- Unocal 3316 - 1301 Switzler Avenue - ERIS ID 9
 - This facility operated as a service station between 1949 and 1985. Two hydraulic hoists and associated equipment were removed in 2001, along with approximately 21 cy of soil. Limited investigations indicated that soil impacts were below established standards or were considered background levels. Groundwater impacts included polycyclic aromatic hydrocarbons (PAHs) and dissolved lead. A deed restriction was placed on the facility, preventing the beneficial use of groundwater. A conditional NFA was granted by ODEQ on December 13, 2001.
- Ray-D-Ant Cleaners - 6th Street Near Switzler Avenue - ERIS ID 12
 - This former dry cleaning facility was listed on a 1948 Polk City Directory with no address. It was estimated to be located near the intersection of 6th Street and Switzler Avenue. ODEQ recommended further investigation of the facility, however, no address has been identified. Additionally, no records or hazardous material use or releases were found.

- Umatilla Texaco - 1100 6th Street - ERIS ID 14
 - Five USTs were decommissioned at the facility. Diesel and heavy oil impacted soil were observed during the decommissioning of two USTs. Approximately 50 cy of impacted soil were removed from the facility. The facility went through the VCUP program to remediate the release and investigate other potential releases associated with a drywell at the facility, receiving an NFA for the drywell on July 19, 1999. ODEQ issued an NFA on August 23, 1999, for the known release.
- Pik A Pop #10 - 1010 6th Street - ERIS ID 15
 - This facility has four permitted USTs for gasoline and diesel, and three permitted ASTs for propane, gasoline, and diesel. A release of approximately 20 gallons of diesel occurred on October 19, 2017, which reportedly entered a storm drain. The release was undergoing cleanup in 2017 (more recent information was not available for review) and is considered closed.
- NAPA Auto Parts - 901 6th Street - ERIS ID 18
 - This facility was used as an auto parts store. During the decommissioning of a heating oil tank in 2016, soil impacted with degraded kerosene was encountered. A total of 4.09 tons of petroleum contaminated soil was excavated and disposed of offsite. A small amount of impacted soil was left in place, with concentrations below site-specific risk-based screening levels. The facility went through the VCUP program and was granted an NFA on September 6, 2016.
- Bonoco Gas Station - 1251 6th Street - ERIS ID 20
 - A release of gasoline occurred at the facility in July 2000. An initial investigation was conducted the same month and identified petroleum impacted soil. A follow-up investigation was completed in 2019 which found low concentrations of petroleum in soil. It was concluded that the concentrations naturally attenuated in the 19 year interim. The follow-up investigation was conducted within VCUP and the facility received an NFA on January 29, 2020.
- John R. Dunn - 730 6th Street - ERIS ID 21
 - A used oil UST was removed from this facility in April 1998. Soil samples indicated petroleum impacted soils in the vicinity of the UST. Three test pits were dug to further evaluate the impacts. Soil concentrations were below established standards and the facility was issued an NFA on May 16, 2003.
- Price-Less Gas - 6th and G Street - ERIS ID 25
 - This facility removed three USTs and associated fuel dispensers in July 2013. Petroleum impacted soil was observed during the removal of the USTs. An estimated 28 tons of impacted soil was excavated and removed from the facility. Residual concentrations were below established standards and the facility was issued an NFA on June 27, 2014.
- Puregro Company - 231 5th Street - ERIS ID 32

- This facility has operated as an agricultural chemical retailer since 1968. Prior to that, the facility was used by Union Pacific Railroad as a maintenance facility. Several areas of concern were identified during a Preliminary Assessment conducted by the EPA, including an area where 32 2.5-gallon containers of fertilizer rinsate was released, a burn pit, a sand blasting area, a small stained area, and an area where 7,000 gallons of fertilizer rinsate were pumped. Investigations identified impacts in the rinsate release area , stained area, and rinsate pumping area. Impacted soil was excavated from the rinsate release area and disposed of offsite. Analytes in the rinsate pumping area were largely unregulated. In the stained area, impacts were generally below or were slightly above established standards. An NFA was issued for the Site on April 2, 2001.

4.4 Other Facilities of Environmental Consideration

During the off-Site reconnaissance, owner/operator interview, and/or review of historical records, no additional establishments with the potential to impact the Site were identified. reconnaissance, owner/operator interview, and/or review of historical records, the following establishments with the potential to impact the Site were identified.

5.0 VAPOR ENCROACHMENT CONDITION SCREENING

The Tier 1 vapor encroachment condition (VEC) screening has been conducted in accordance with ASTM E2600-15. A VEC is defined as the presence or likely presence of vapors from the chemicals of concern in the subsurface of the Site attributed to the release of vapors from contaminated soil or groundwater either on or near the Site. Vapor encroachment does not necessarily result in vapor intrusion condition; the vapors must not only be encroaching on the Site, but also be able to migrate into structures on the Site and impact indoor air quality.

Pinyon has selected to utilize the default area of concern (AOC) to evaluate the potential for a VEC at the Site. There are other factors that can modify the AOC, such as depth to groundwater, soil type, rivers, utility corridors, basement, and type of ventilation systems in nearby buildings. However, it is beyond the scope of this Phase I ESA to conduct such an evaluation.

Vapor Encroachment Screening	
Search Distance Criteria	Answer
Are there any known or suspected contaminant of concern impacted properties within 1,760 feet (1/3 mile) of the Site boundary?	Yes.
Are there any known or suspected petroleum hydrocarbon impacted properties within 528 feet (1/10 mile) of the Site boundary?	No.
Is it likely that a VEC currently exists at the Site?	No. Areas in the vicinity of the Site are not impacted with volatile compounds and/or are of a sufficient distance that impacts would not create a VEC at the Site.

6.0 CONCLUSIONS

6.1 Findings and Opinion

We have performed a Phase I Environmental Site Assessment in conformance with the scope and limitations of ASTM Practice E1527-21 of Umatilla School District Athletic Fields and Natural Area, I Street, Umatilla, Oregon. Any exceptions to, or deletions from, this practice are described in [Deletions and Deviations from Standard](#) in this report.

Condition	Identified

Historical Recognized Environmental Conditions		
Facility	Discussion of HRECs	Opinion
None	Not applicable	Not applicable

Controlled Recognized Environmental Conditions		
Facility	Discussion of CRECs	Opinion
None	Not applicable	Not applicable

De Minimis Conditions		
Facility	Discussion of de minimis conditions	Opinion
Site	The eastern portion of the Site contained sparse solid waste.	The solid waste was dumped at the Site from occupants of the adjacent mobile home park. Previous reporting documented large amounts of debris and refuse removed from the same area in 1999. No staining or odors were observed in 1999 or during the Site visit. The solid waste is not an imminent threat to human health or the environment and would not likely be the subject of an enforcement action if brought to the attention of the regulatory agency; therefore, this is considered a <i>de minimis</i> condition for the Site.

De Minimis Conditions		
Facility	Discussion of de minimis conditions	Opinion
Site	A former pad-mounted transformer was destroyed in a flood.	A flood occurred at the Site in 2020, which destroyed a pad-mounted transformer associated with the irrigation pump. No evidence of staining or strained vegetation was observed in the area of the transformer. While the PCB contents of the transformer were unknown, it is unlikely that PCB concentrations at the Site are an imminent threat to human health or the environment and would not likely be the subject of an enforcement action if brought to the attention of the regulatory agency; therefore, this is considered a <i>de minimis</i> condition for the Site.

Non-RECs		
Facility	Discussion of Non-RECs	Opinion
Gravel Pits, north of Site, ERIS ID 1 and 2	A portion of the gravel pits are now used as a burn pit.	It was reported that only untreated and unpainted wood was burned in the pit. No evidence of hazardous material or petroleum product burning was observed. For that reason, it is unlikely that Site soil, soil vapor, or groundwater has been impacted by the burn pit.

Non-RECs		
Facility	Discussion of Non-RECs	Opinion
Leathers Oil Company - 700 G Street - ERIS ID 7	A release occurred at this facility.	This facility is located 511 feet to the west of Site. In August 1999, four USTs were removed from the facility. Impacts to surrounding soil were observed during the UST removal. Approximately 200 cy of petroleum contaminated soil was removed from the facility during initial investigation, followed by an additional 13.22 tons. Residual soil concentrations were below established standards. ODEQ issued a NFA on March 3, 2003. Therefore, it is unlikely that Site soil, soil vapor, or groundwater has been impacted by this release.
JR Simplot dba Simplot Growers Solutions - 1013 Old River Road - ERIS ID 8	This facility stores bulk agricultural chemicals and has had two recorded releases.	This facility is located 545 feet to the east and upgradient of Site. The facility has numerous ASTs containing various pesticides, herbicides, and other agricultural chemicals. A release of 5,000 to 8,000 gallons of ammonium thiosulfate fertilizer occurred in December 2003.

Non-RECs		
Facility	Discussion of Non-RECs	Opinion
		<p>Approximately 1,000 gallons of herbicide was released at the facility on April 22, 2008. Impacted soil was excavated and residual soil impacts were above EPA residential RSLs. Since groundwater impacts were below EPA standards and there was no soil exposure pathway, ODEQ issued an NFA and allowed the soil to remain in place while naturally attenuating. Due to the results of the 2008 investigation and cleanup and that there were no groundwater impacts, it is unlikely that Site soil, soil vapor, or groundwater has been impacted by this facility.</p>

Non-RECs		
Facility	Discussion of Non-RECs	Opinion
7th and Old River Road - ERIS ID 16	A release occurred at this facility.	This facility is located 632 feet to the east-northeast of Site. A release occurred on October 16, 2010, when a semi-truck carrying 1,000 lbs of hazardous materials overturned, spilling 480 lbs of hydrogen peroxide mix and 420 gallons of flammable paint mixture, impacting surrounding soil. The status of the release was archived with no update regarding potential cleanup efforts. Archived status is typical of events where no release actually occurred. For that reason, it is unlikely that Site soil, soil vapor, or groundwater has been impacted by this event.

Non-RECs		
Facility	Discussion of Non-RECs	Opinion
Wilbur-Ellis Company - 711 River Road - ERIS ID 24	A release was reported at this facility.	This facility is located 812 feet to the east-northeast of Site. A complaint was filed with ODEQ on July 15, 1986, alleging that during utility repairs, groundwater encountered in the vicinity of the facility had a yellow color and smelled like fertilizers or pesticides. A subsurface investigation was conducted between 2004 and 2006. A total of 40 soil samples were collected and analyzed for herbicides, pesticides, metals, and hydrocarbons. Analytes were below established standards and ODEQ issued an NFA on January 4, 2007. Therefore, it is unlikely that Site soil, soil vapor, or groundwater has been impacted by this release.

Business Environmental Risks (BERs)		
Facility	Discussion of BERs	Opinion
Site	A rail spur extends along the northern Site boundary.	A gravel pit formerly operated along the northern Site boundary. A rail spur likely associated with the gravel pits extended along the northern boundary on the eastern portion of the Site, which is reportedly still in place.

Business Environmental Risks (BERs)		
Facility	Discussion of BERs	Opinion
		Railroad ties are commonly treated with creosote which can leach into surrounding soil and groundwater. The railroad ties have been used as they are intended and are not considered a REC; however, railroad materials and potentially impacted soil and/or groundwater would need to be properly handled and disposed if the spur is disturbed.

6.2 Landowner Liability Protections

USACE already owns the Site, so landowner liability protections do not apply.

6.3 Recommended Investigation and Services for RECs

At this time, no additional investigations are recommended.

6.4 Conclusions and Recommendations for Additional Concerns

No additional recommendations are made.

6.5 Data Gaps

A data gap is a lack of or inability to obtain the information required by the ASTM standard despite good-faith efforts to gather such information. Data failure is a failure to achieve the historical research objectives even after reviewing the standard historical sources that are reasonably ascertainable and likely to be useful.

Three data gaps were encountered for the Site.

1. The ASTM Standard requires that Site use be documented to 1940, or first developed use, whichever is earlier. For the purpose of the ASTM Standard, developed use includes agricultural use and placement of fill dirt. Pinyon can document that the Site was used for agricultural use in 1952, which does not establish first use. Pinyon researched all reasonably attainable data for the Site, and it is unlikely that additional information exists prior to 1952 to the level of detail needed to evaluate use. This constitutes data failure, a form of a data gap.
2. The southeast portion of the Site was inaccessible at the time of the visit due to thick vegetation. Some of these areas were able to be observed from a nearby road. This data gap is not considered significant, as it is unlikely that hazardous substances or petroleum products are stored in these areas.
3. A request was submitted to Umatilla Rural Fire Protection District for records pertaining to the Site. At the time of this report, Pinyon has not received a response.

7.0 REFERENCES

Pinyon conducted interviews, site visits, consulted historical and current report research in relation to the Site. A summary of the most common sources are listed below.

NRCS, 2023. "Soil Map - Umatilla County Area, Oregon, Umatilla Athletic Fields and Natural Area," Natural Resources Conservation Service, July 28, 2023.

USACE. 1999. "Preliminary Assessment Screening for John Day Lock and Dam Project, Umatilla School District No. 6R," United States Army Corps of Engineers, Portland District, September 24, 1999.

USGS, 1993. "Geologic Radon Potential of EPA Region 10, Open File Report 93-292-J," United States Geological Survey, 1993.

8.0 QUALIFICATIONS

The environmental site assessment activities described herein were conducted in accordance with generally accepted standards, practices and procedures (expressed or implied) in effect at the time of the project, relative to the All Appropriate Inquiry (as defined under the Comprehensive Environmental Response, Compensation and Liability Act (CERCLA) 42 USC Section 9601, et. seq.). Numerous individuals were contacted for information about the Site and surrounding areas (Table 1-1). Relevant information was also obtained from published sources (referenced in Section 7.0).

The project was completed by an Environmental Professional, or conducted under the supervision or responsible charge of an Environmental Professional. At a minimum, the Environmental Professional was involved in planning the Site reconnaissance and interviews, and reviewed and interpreted the information used in developing the conclusions. Resumes of the personnel involved in this project are included in the [Resumes Appendix](#).

We declare that, to the best of our professional knowledge and belief, we meet the definition of Environmental Professionals as defined in §312.1 of 40CFR 312. Other persons involved are qualified individuals, and have the training and experience necessary to complete their assigned tasks.

We have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the subject property. We have developed and performed the all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

9.0 LIMITATIONS

This report was prepared by Pinyon Environmental, Inc., at the request of and for the sole benefit of United States Army Corps of Engineers, Portland District, or any entity controlling, controlled by, or under common control with United States Army Corps of Engineers, Portland District. This report addresses certain physical characteristics of the Site with regards to the release or presence of hazardous materials. It is not intended to warrant or otherwise imply that the Site is or is not free from conditions, materials, or substances which could adversely impact the environment or pose a threat to public health and safety. The material in this report reflects the best judgment of Pinyon in light of the information that was readily available at the time of preparation. In general, Pinyon did not verify information obtained by others, and assumed the provided information to be truthful and accurate.

This report is for the exclusive and present use of United States Army Corps of Engineers, Portland District, or any entity controlling, controlled by, or under common control with United States Army Corps of Engineers, Portland District, to assist with an environmental evaluation of the Site. In the event of any reuse or publication of any portion of this report, Pinyon Environmental, Inc., shall not be liable for any damages arising out of such reuse or publication. Any use a third party makes of this report, or any reliance on or decisions to be made on it, are the responsibility of such third party. Pinyon accepts no responsibility for damages, if any, suffered by any third party as a result of decisions made or actions taken based on this report.

The principles outlined in Section 4.5 of the ASTM Standard are an integral part of this practice and are intended to be referred to in resolving any ambiguity or exercising such discretion as is accorded the user or environmental professional in performing an environmental site assessment or in judging whether a user or environmental professional has conducted appropriate inquiry or has otherwise conducted an adequate environmental site assessment.

Under ASTM Standard, this report is presumed to be valid for 180 days from the date of completion. For more information on the continued viability of this document, refer to the ASTM Standard, Section 4.6.

9.1 Deletions and Deviations from Standard

There were no deletions or deviations from the Standard. Any data failures encountered are discussed in [Site History](#); any data gaps are outlined in [Data Gaps](#).

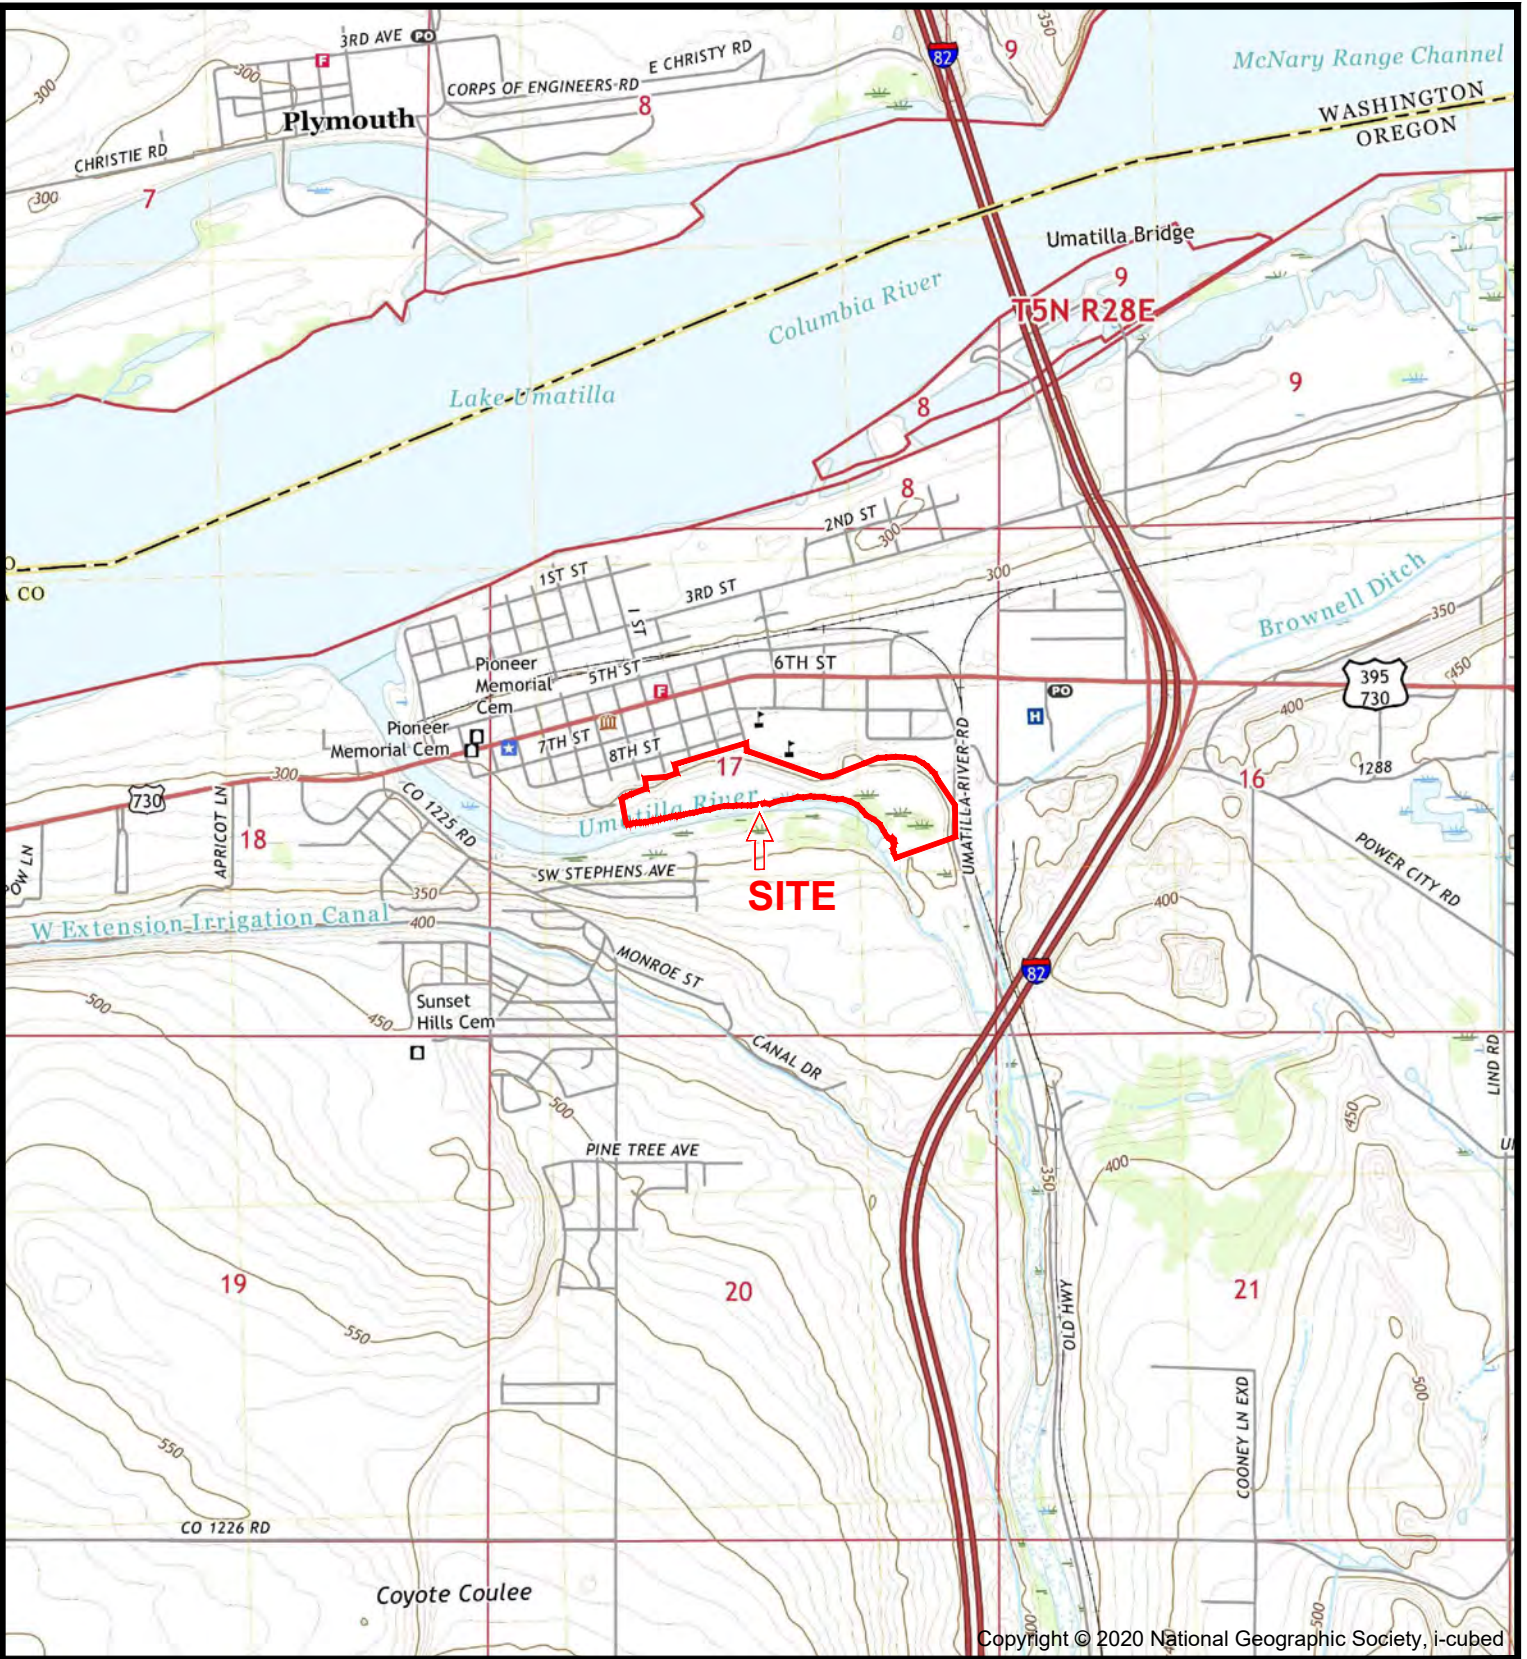

9.2 Additions to Standard

Additional services were added to the ASTM Standard, including an evaluation of:

- Whether or not it is likely for asbestos or lead-based paint to be in the building, if applicable
- The likely presence of wetlands
- Whether or not the Site is located within a floodplain
- The likelihood for radon gas to be a health concern at the Site, using published data

RE: CITY DIRECTORY RESEARCH

Umatilla School District Athletic Fields and Natural Area

Umatilla,OR

Thank you for contacting ERIS for an City Directory Search for the site described above. Our staff has conducted a reverse listing City Directory search to determine prior occupants of the subject site and adjacent properties. We have provided the nearest addresses(s) when adjacent addresses are not listed. If we have searched a range of addresses, all addresses in that range found in the Directory are included.

Note: Reverse Listing Directories generally are focused on more highly developed areas. Newly developed areas may be covered in the more recent years, but the older directories will tend to cover only the "central" parts of the city. To complete the search, we have either utilized the ACPL, Library of Congress, State Archives, and/or a regional library or history center as well as multiple digitized directories. These do not claim to be a complete collection of all reverse listing city directories produced.

ERIS has made every effort to provide accurate and complete information but shall not be held liable for missing, incomplete or inaccurate information. To complete this search we used the general range(s) below to search for relevant findings. If you believe there are additional addresses or streets that require searching please contact us at 866-517-5204.

Search Criteria:

all of I St

all of L St

SCHEDULING INSPECTIONS

Various inspections are minimally required on each project and often dependent on the scope of work. Contact the issuing jurisdiction indicated on the permit to determine required inspections for this project.

Schedule or track inspections at www.buildingpermits.oregon.gov

Schedule by phone call 1-888-299-2821 use IVR number: 87700000554

Schedule using the Oregon ePermitting Inspection App, search "epermitting" in the app store

PERMIT FEES

Fee Description	Quantity	Fee Amount
PERMIT_FEE	1	\$125.00
PLAN_REVIEW	1	\$31.25
STATE_SURCHARGE	1	\$15.00
Total Fees:		\$171.25

Permits must be posted in clear view on the worksite. Permits expire if work is not started within 180 Days of issuance or if work is suspended for 180 Days or longer depending on the issuing agency's policy.

All provisions of laws and ordinances governing this type of work will be complied with whether specified herein or not. Granting of a permit does not presume to give authority to violate or cancel the provisions of any other state or local law regulating construction or the performance of construction.

ATTENTION - CALL BEFORE YOU DIG: Oregon law requires you to follow rules adopted by the Oregon Utility Notification Center.

Those rules are set forth in OAR 952-001-0010 through OAR 952-001-0090. You may obtain copies of the rules by calling the Center at (877) 668-4001 or dial 811.

All persons or entities performing work under this permit are required to be licensed unless exempted by ORS 701.010

(Structural/Mechanical), ORS 479.540 (Electrical), and ORS 693.010-020 (Plumbing).

Notice: IMPORTANT LIMITATIONS and YOUR LIABILITY

Reliance on information in Report: This report DOES NOT replace a full Phase I Environmental Site Assessment but is solely intended to be used as database review of environmental records.

License for use of information in Report: No page of this report can be used without this cover page, this notice and the project property identifier. The information in Report(s) may not be modified or re-sold.

Your Liability for misuse: Using this Service and/or its reports in a manner contrary to this Notice or your agreement will be in breach of copyright and contract and ERIS may obtain damages for such mis-use, including damages caused to third parties, and gives ERIS the right to terminate your account, rescind your license to any previous reports and to bar you from future use of the Service.

No warranty of Accuracy or Liability for ERIS: The information contained in this report has been produced by ERIS Information Inc. ("ERIS") using various sources of information, including information provided by Federal and State government departments. The report applies only to the address and up to the date specified on the cover of this report, and any alterations or deviation from this description will require a new report. This report and the data contained herein does not purport to be and does not constitute a guarantee of the accuracy of the information contained herein and does not constitute a legal opinion nor medical advice. Although ERIS has endeavored to present you with information that is accurate, ERIS disclaims, any and all liability for any errors, omissions, or inaccuracies in such information and data, whether attributable to inadvertence, negligence or otherwise, and for any consequences arising therefrom. Liability on the part of ERIS is limited to the monetary value paid for this report.

Trademark and Copyright: You may not use the ERIS trademarks or attribute any work to ERIS other than as outlined above. This Service and Report (s) are protected by copyright owned by ERIS Information Inc. Copyright in data used in the Service or Report(s) (the "Data") is owned by ERIS or its licensors. The Service, Report(s) and Data may not be copied or reproduced in whole or in any substantial part without prior written consent of ERIS.

Executive Summary

Property Information:

Project Property: *Umatilla School District Athletic Fields and Natural Area
Umatilla School District Athletic Fields and Natural Area Umatilla OR*

Project No: *1/21-0295-02.002.SC003.5*

Coordinates:

Latitude: *45.91497941*
Longitude: *-119.33609492*
UTM Northing: *5,087,254.83*
UTM Easting: *318,835.45*
UTM Zone: *11T*

Elevation: *279 FT*

Order Information:

Order No: *23053101602*
Date Requested: *May 31, 2023*
Requested by: *Pinyon Environmental, Inc.*
Report Type: *Database Report*

Historicals/Products:

Aerial Photographs *Historical Aerials (with Project Boundaries)*
City Directory Search *CD - 2 Street Search*
ERIS Xplorer [*ERIS Xplorer*](#)
Excel Add-On *Excel Add-On*
Fire Insurance Maps *US Fire Insurance Maps*
Physical Setting Report (PSR) *Physical Setting Report (PSR)*
Topographic Map *Topographic Maps*

 Handler Name: J R SIMPLOT DBA SIMPLOT GROWER SOLUTIONS
 Federal Waste Generator Code: 1
 Generator Code Description: Large Quantity Generator
 Source Type: Annual/Biennial Report update with Notification

Waste Code Details

Hazardous Waste Code: P037
 Waste Code Description: 2,7:3,6-DIMETHANONAPHTH[2,3-B]OXIRENE, 3,4,5,6,9,9-HEXACHLORO-1A,2,2A,3,6,6A,7,7A-OCTAHYDRO-, (1AALPHA, 2BETA, 2AALPHA, 3BETA, 6BETA, 6AALPHA, 7BETA, 7AALPHA)- (OR) DIELDRIN

Hazardous Waste Code: U028
 Waste Code Description: 1,2-BENZENEDICARBOXYLIC ACID, BIS(2-ETHYLHEXYL) ESTER (OR) DIETHYLHEXYL PHTHALATE

Hazardous Waste Code: U077
 Waste Code Description: ETHANE, 1,2-DICHLORO- (OR) ETHYLENE DICHLORIDE

Hazardous Waste Code: U239
 Waste Code Description: BENZENE, DIMETHYL- (I,T) (OR) XYLENE (I)

Hazardous Waste Code: D002
 Waste Code Description: CORROSIVE WASTE

Hazardous Waste Code: D028
 Waste Code Description: 1,2-DICHLOROETHANE

Hazardous Waste Code: U240
 Waste Code Description: 2,4-D, SALTS & ESTERS (OR) ACETIC ACID, (2,4-DICHLOROPHENOXY)-, SALTS & ESTERS (OR) DICHLOROPHENOXYACETIC ACID 2,4-D

Hazardous Waste Code: D016
 Waste Code Description: 2,4-D (2,4-DICHLOROPHENOXYACETIC ACID)

Hazardous Waste Code: U120
 Waste Code Description: FLUORANTHENE

Hazardous Waste Code: U165
 Waste Code Description: NAPHTHALENE

Hazardous Waste Code: F003
 Waste Code Description: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NONHALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS, AND A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Hazardous Waste Code: U083
 Waste Code Description: PROPANE, 1,2-DICHLORO- (OR) PROPYLENE DICHLORIDE

Hazardous Waste Code: U185
 Waste Code Description: BENZENE, PENTACHLORONITRO- (OR) PENTACHLORONITROBENZENE (PCNB)

Comment:			

(7/1/03 MMR/ERP) RP reported a 5,000 - 8,000-gallon fertilizer spill from the bottom valve of a railroad tanker car. Release is contained to the Simplot yard. Contaminant of concern (COC) is ammonium thiosulfate, which has no TWA, STEL, TLV and is considered to have a low toxicity to humans; however, it does have aquatic toxicity and the spill is in the vicinity of the Umatilla River.

(6/26/08 DMC/SAS) ER/Spills referred site to ER/Cleanup after completing initial removal action for herbicide spill during 5/08.

Comment:			

(7/1/03 BMcK/ERP) Fertilizer spill has soaked into the ground, ER/ERP staff handling cleanup activities and evaluating potential impacts to groundwater.

(7/1/03 MMR/ERP) The site has been referred to DEQ's WQ program for further investigation.

6/26/08 DMC/SAS) ER Spills removal action for herbicide spill during 5/08; site referred to the Voluntary Cleanup program (VCP) for completion on 6/25/08.

(May 11, 2009, Bob Schwarz) Documentation of the investigation and cleanup of the 2008 Eptam spill are provided in the attached staff report. DEQ issued a No Further Action determination for this spill on May 4, 2009. A copy of the No Further Action letter is also attached.

Comment:			

2003 spill occurred in an industrial area, approximately 1350 feet from the Umatilla River and groundwater is estimated to be 20-40 feet below ground surface (BGS).

Brownell Ditch is adjacent to the western border of the site and the Umatilla River is slightly more than 1,000 feet west of the site.

----------	----------------	----------	----------------------	--------------------	--	---------------

Incident No: 2016-1075	County Name: Umatilla
Incident Status: Closed	Latitude: 45.854158
Incident Date: Tue May 3 2016	Longitude: -119.301742
Situation:	

JR Simplot reported the spill of 100 gallons of off-road diesel onto gravel. Workers were loading a terragator (fertilizer spreader) onto a lowboy trailer, when a board broke, pushing up and hitting the fuel lines on the bottom of the equipment. The diesel spilled out onto the trailer and the gravel below. Inhouse cleanup occurred already, using floor dry and they excavated the material.

Spill Details

Media Affected: Soil
Material: Oil - Diesel
Release Source: Motor Vehicle - Commercial
RP Organization: J.R. Simplot

(6/25/98 DMC/SAS) Sampling results from a release associated with a waste oil tanks and drywell were forwarded to ER/SAS in conjunction with a UST cleanup. Consultant wants to complete the cleanup under UST Program rules, but the waste oil and spent solvents should be addressed under Cleanup Program rules.

Comment:			

(09/2016; TJE) Contamination was discovered during the decommissioning of a Heating Oil Tank (HOT); however, the contamination is not associated with the HOT. During the decommissioning, a total of 4.09 tons of petroleum contaminated material were removed and disposed of in Finley Buttes Landfill (Boardman, Oregon).

A pocket of degraded kerosene was left in place in the unpaved City alley. However, the concentrations were below the site specific risk-based concentrations.

Narrative Code:	MEDC	Last Updated by Init:	TENGLAN
Narrative Desc:	Media Contamination	Last Updated on Dt:	09/09/2016
Created by Init:	TENGLAN		
Comment:			

Soil is contaminated with degraded kerosene; no groundwater was encountered during excavation.

Comment:						

(11/17/2000 DMC/SAS) Site referred to ER/SAS by ER/HW Complaint staff after receiving reports from City of Umatilla officials that the owner of the gas station dumped ~60 gallons of gasoline on the ground. People complained to the city about gas vapors in the area of the alleged dumping.

Comment:

(11/17/2000 DMC/SAS) Site had received an NFA letter from ER/Tanks prior to the incident. Sample results were not high enough to qualify as a hazardous waste violation so the site was referred to ER/SAS for further investigation.

(1/17/01 KJR/SAS) Laboratory data from site sampling documents a release of gasoline and associated components. Site recommended for Confirmed Release List.

Comment:						

(12/28/01 DMC/SAS) Site added to database for tracking a potential USTfield. Site does not appear by name or address in the LUST/UST databases, but appears to be a former gas station and currently inactive property (phone number in 1997 phone book is disconnected and directory assistance has no current listing for the property).

(3/28/88 MJZ/SAS) Complaint on 7/15/86 alleges that when a water pipe was being repaired on-site, exposed groundwater had a yellow color and smelled like fertilizers or pesticides. (2/8/06 KJR/SAS) ER/SAS conducted a site walkover on May 25, 2004. The site is fenced and connected to the city water and sewer lines. The pesticide storage warehouse is the largest building and the concrete floor is set below grade for spill purposes. The building contains mostly packaged pesticides along with liquid pesticides in small ASTs within secondary containment. Roundup makes up the highest volume of sales, but other products include 2,4-D, Aldicarb, Lindane, Malathion, MCPA, and Paraquat.

(3/8/04 DMC/SAS) Information Request sent 2/23/04; RP has 30 days to respond. (2/8/06 KJR/SAS) Federal screening was completed on June 9, 2004. Since the screening was completed, the plant has closed. Additional sampling is recommended. (12/18/06 KJR/VCP) ITP received in March 2006. ICP letter agreement received 4/10/06. Site Assessment performed in July 2006.

(1/8/06 KJR/VCP) Following was taken from the NFA Decision Document:
 Twenty-three soil borings were pushed in July 2006, located throughout the site to ensure complete site coverage and focused on the following areas: former UST and water tap area; runoff collection area south of water tap; AST area and associated sump; bulk chemical loading area; loading dock drywell; gravel area behind the shop; east equipment storage yard; burn area west of shop; and the current and former used container storage areas.

Soil borings were pushed to a maximum depth of 12 feet below ground surface (bgs). Refusal around 4 feet bgs, due to coarse gravel, was encountered in many borings. Subsurface soil generally consisted of crushed gravel to 0.5 feet, underlain by sand to up to 4 feet, underlain by sandy gravel with silt and cobbles to the total depth explored of 12 feet bgs. Groundwater was not encountered in any of the borings.

<i>Map Key</i>	<i>Number of Records</i>	<i>Direction</i>	<i>Distance (mi/ft)</i>	<i>Elev/Diff (ft)</i>	<i>Site</i>	<i>DB</i>
----------------	--------------------------	------------------	-------------------------	-----------------------	-------------	-----------

A total of 40 soil samples were collected at the site. All but one soil sample were analyzed for chlorinated herbicides, organophosphate pesticides, and organochlorine pesticides. All but five soil samples were analyzed for fertilizer compounds. Select soil samples were also analyzed for one or more of the following: carbamate pesticides, total metals (arsenic, barium, cadmium, chromium, potassium, nickel, phosphorus, lead, zinc), and hydrocarbon identification.

Concentrations detected in soil samples were compared to generic risk-based concentrations (RBCs) listed in DEQ's Risk-Based Decision Making for the Remediation of Petroleum-Contaminated Sites (RBDM) guidance dated September 22, 2003. The herbicides and pesticides are considered non-volatile compounds and RBCs for the volatilization to outdoor air and vapor intrusion into building pathways are considered incomplete.

If a RBC was not assigned to a specific compound than the EPA Region 9 Preliminary Remedial Goals (PRGs) dated October 2004 were used. Total metals were also compared to default background concentrations from DEQ's Toxicology Workgroup Memo dated October 28, 2002.

Cleanup levels are not listed for the fertilizers analyzed: ammonia-nitrogen, nitrate-nitrogen, nitrite-nitrogen, total kjeldahl nitrogen, and total nitrogen concentrations.

Dieldrin detected in soil sample 8B at 1 foot at 0.0869 mg/kg exceeded the residential soil ingestion, dermal contact, and inhalation and leaching to groundwater pathways but not the occupational pathways. Dieldrin was not detected in soil sample 8B at 3 feet indicating that the elevated levels of dieldrin detected in sample 8B-1 are limited.

Conclusions

Due to the length of time since the 1976 complaint, specific information regarding the location of the water line break could not be located. However, groundwater in the City of Umatilla area ranges from 30 feet to over 100 feet in depth. Given the depth to groundwater in the area, water lines at the facility are unlikely to be located in or near the groundwater table.

A comprehensive evaluation was performed of the shallow subsurface in areas that were potential sources of releases. Limited compounds were detected and none were detected above occupational RBCs or PRGs.

Recommendation

Based on the available data and the preceding discussion, a no further action determination is proposed for the Wilbur-Ellis Co. - Umatilla site. Remedial actions have not been performed at the site; therefore a public comment period is not required.

DEQ issued a no-further-action letter for the site 1/4/07.

Comment:			

Surface Water- The nearest surface water is Brownell Ditch, approximately 650 feet south of the site. It is at a slightly higher grade than the site and protected by dikes, but does serve as an indication that surface water in the vicinity of the site flows to the southwest. Therefore, the nearest down gradient surface water is the Umatilla River, approximately 1,500 feet southwest of the site. The Columbia River is approximately 2,800 feet north of the site. The Umatilla River empties into the Columbia River. The site appears to be graded in a manner that diverts surface water to the center of the site and one of the employees said it is not unusual for standing water to collect on-site after heavy rains. Surface water is a secondary pathway of concern as infiltration to groundwater.

Soil – No site specific data available but well logs for adjacent or nearby properties record a thin layer of sandy topsoil, generally 2 to 8 feet below ground surface (BGS), a second layer of mostly claystone, sands and gravels (some cemented), boulders, and silts ranging from 2 to more than 30 feet BGS, and a basalt layer ranging from 30 to 150 feet BGS (see Attachment 9.) Direct contact with hazardous substances is a potential pathway of concern; however, no releases have been confirmed.

Groundwater – The anonymous complaint alleges groundwater was observed while a water pipe was being repair, indicating depth to groundwater can be very shallow at times. According to available well logs, depth to groundwater in the area varies from approximately 30 feet below ground surface (BGS) to more than 100 feet BGS (see Attachment 9). Area groundwater is used for drinking water and recharge to the Umatilla River. Groundwater is the primary pathway of concern.

Air - The site has minimum ground cover, is subject to wind dispersal, and is adjacent to a pathway used by locals and is also near residential properties. There is a potential for inhalation of contaminated dust; however, no signs of a recent release were observed during the site walkover so the air pathway is a secondary concern.

The site has been owned and operated by the Wilbur-Ellis Company since 1975 as a facility that stores and distributes packaged and liquid agricultural chemicals, including fertilizers and pesticides. According to their website, Wilbur-Ellis is an international marketer and distributor of agricultural and industrial products with current annual sales exceeding \$1 billion. The Umatilla site consists of three buildings (an office, a pesticide storage building, and a shop), aboveground storage tanks (ASTs), and parking/storage areas. The company is unaware of the previous use of the property, but believes it

(1/3/01 KJR/SAS) From 1949 to 1968 the facility consisted of a station building with lube room and pump island, three 1,000-gallon gasoline USTs, and

Map Key	Number of Records	Direction	Distance (mi/ft)	Elev/Diff (ft)	Site	DB
---------	-------------------	-----------	------------------	----------------	------	----

a heating-oil AST. The station was remodeled in 1968 with the addition of a new station building; two hydraulic hoists, two pump islands, two 10,000-gallon gasoline USTs, a 550-gallon heating-oil UST, and a 550-gallon waste-oil UST. In 1985, the USTs and pumps were removed, the site was fenced, and the building was boarded up.

(1/30/01 KJR/SAS) A 1987 site investigation included the installation and sampling of four borings, two of which were converted to groundwater wells. Petroleum products were not identified in soil and groundwater samples. A second site investigation was performed in November 2000. 11 soil borings and 4 hand augers were installed at the site. Two of the soil borings were converted to temporary groundwater wells. Soil and groundwater samples were sampled for one or more of the following analytes: BTEX, EDB, EDC, gasoline, diesel, heavy oil, total lead, VOCs, dissolved lead, PAHs, and TCLP cd, cr, pb. Total lead was detected in all samples analyzed for, at 2.25 to 11 mg/kg. All other compounds were either non-detect or detected at low levels, with the exception of one soil sample from the vicinity of the hydraulic hoists, which contained diesel at 1,140 mg/kg and heavy oil at 1,680 mg/kg. The two groundwater samples contained only PAHs and dissolved lead. Based on the results of the site investigation, the only pathway of concern at the site is the beneficial use of groundwater (ingestion). DEQ reviewed the investigation and provided comments on the final activities required at the site, which consist of delineation/removal of soil in the vicinity of the hydraulic hoists, and a deed restriction to prevent groundwater being used for drinking water. The presence of a deed restriction requires listing the site on the CRL and Inventory of Hazardous Substances Sites. (8/22/01 KJR) 21 cubic yards of impacted soil and the hydraulic hoists were removed from the site in June 2001. Analytical results indicate low levels of diesel/heavy oil. PAHs were not detected at levels exceeding RBCs. (12/18/01 KJR/VCP) A deed restriction restricting groundwater use was placed on the property and recorded in Umatilla County 11/6/01. DEQ issued NFA 12/13/01. (7/25/02 KJR/VCP) Unocal notified DEQ in letter dated 7/3/02 of pending property sale to CAR HON, LLC as required in Easement and Equitable Servitude.

(1/3/01 KJR/SAS) From 1949 to 1968 the facility consisted of a station building with lube room and pump island, three 1,000-gallon gasoline USTs, and a heating-oil AST. The station was remodeled in 1968 with the addition of a new station building; two hydraulic hoists, two pump islands, two 10,000-gallon gasoline USTs, a 550-gallon heating-oil UST, and a 550-gallon waste-oil UST. In 1985, the USTs and pumps were removed, the site was fenced, and the building was boarded up.

(1/30/01 KJR/SAS) A 1987 site investigation included the installation and sampling of four borings, two of which were converted to groundwater wells. Petroleum products were not identified in soil and groundwater samples. A second site investigation was performed in November 2000. 11 soil borings and 4 hand augers were installed at the site. Two of the soil borings were converted to temporary groundwater wells. Soil and groundwater samples were sampled for one or more of the following analytes: BTEX, EDB, EDC, gasoline, diesel, heavy oil, total lead, VOCs, dissolved lead, PAHs, and TCLP cd, cr, pb. Total lead was detected in all samples analyzed for, at 2.25 to 11 mg/kg. All other compounds were either non-detect or detected at low levels, with the exception of one soil sample from the vicinity of the hydraulic hoists, which contained diesel at 1,140 mg/kg and heavy oil at 1,680 mg/kg. The two groundwater samples contained only PAHs and dissolved lead. Based on the results of the site investigation, the only pathway of concern at the site is the beneficial use of groundwater (ingestion). DEQ reviewed the investigation and provided comments on the final activities required at the site, which consist of delineation/removal of soil in the vicinity of the hydraulic hoists, and a deed restriction to prevent groundwater being used for drinking water. The presence of a deed restriction requires listing the site on the CRL and Inventory of Hazardous Substances Sites. (8/22/01 KJR) 21 cubic yards of impacted soil and the hydraulic hoists were removed from the site in June 2001. Analytical results indicate low levels of diesel/heavy oil. PAHs were not detected at levels exceeding RBCs. (12/18/01 KJR/VCP) A deed restriction restricting groundwater use was placed on the property and recorded in Umatilla County 11/6/01. DEQ issued NFA 12/13/01. (7/25/02 KJR/VCP) Unocal notified DEQ in letter dated 7/3/02 of pending property sale to CAR HON, LLC as required in Easement and Equitable Servitude.

(1/3/01 KJR/SAS) From 1949 to 1968 the facility consisted of a station building with lube room and pump island, three 1,000-gallon gasoline USTs, and a heating-oil AST. The station was remodeled in 1968 with the addition of a new station building; two hydraulic hoists, two pump islands, two 10,000-gallon gasoline USTs, a 550-gallon heating-oil UST, and a 550-gallon waste-oil UST. In 1985, the USTs and pumps were removed, the site was fenced, and the building was boarded up.

The subsurface geology at the site consists of 5 to 11 feet of gravelly sand underlain by gravel to the total depth explored of 60.3 feet bgs. Groundwater was encountered around 54 feet bgs.

(1/30/01 KJR/SAS) A 1987 site investigation included the installation and sampling of four borings, two of which were converted to groundwater wells. Petroleum products were not identified in soil and groundwater samples. A second site investigation was performed in November 2000. 11 soil borings and 4 hand augers were installed at the site. Two of the soil borings were converted to temporary groundwater wells. Soil and groundwater samples were sampled for one or more of the following analytes: BTEX, EDB, EDC, gasoline, diesel, heavy oil, total lead, VOCs, dissolved lead, PAHs, and TCLP cd, cr, pb. Total lead was detected in all samples analyzed for, at 2.25 to 11 mg/kg. All other compounds were either non-detect or detected at low levels, with the exception of one soil sample from the vicinity of the hydraulic hoists, which contained diesel at 1,140 mg/kg and heavy oil at 1,680 mg/kg. The two groundwater samples contained only PAHs and dissolved lead. Based on the results of the site investigation, the only pathway of concern at the site is the beneficial use of groundwater (ingestion). DEQ reviewed the investigation and provided comments on the final activities required at the site, which consist of delineation/removal of soil in the vicinity of the hydraulic hoists, and a deed restriction to prevent groundwater being used for drinking water. The presence of a deed restriction requires listing the site on the CRL and Inventory of Hazardous Substances Sites. (8/22/01 KJR) 21 cubic yards of impacted soil and the hydraulic hoists were removed from the site in June 2001. Analytical results indicate low levels of diesel/heavy oil. PAHs were not detected at levels exceeding RBCs. (12/18/01 KJR/VCP) A deed restriction restricting groundwater use was placed on the property and recorded in Umatilla County 11/6/01. DEQ issued NFA 12/13/01. (7/25/02 KJR/VCP) Unocal notified DEQ in letter dated 7/3/02 of pending property sale to CAR HON, LLC as required in Easement and Equitable Servitude.

(3/30/88 DAB/SRS) The site is 600 ft east of The Umatilla River and 1200 ft south-southeast of the Columbia River. Should the pond overflow, contaminated surface runoff has the potential to reach the rivers. Should the bentonite liner fail, there is potential for the contamination of soils and groundwater. The pond appears to have maintained its integrity; however, it has not been cleaned or dredged since its construction. Municipal drinking water wells for the City of Umatilla are located within 3 miles of the site. Groundwater in the site vicinity is 30 to 50 feet below grade. Areas of concern at the site are unlikely to have impacted groundwater. The air pathway is unlikely to have been impacted by contaminants of concern. (1/10/01 KJR/SAS) Surface water was a possible pathway of concern at the site, as noted above. Direct contact with impacted soil was also a potential pathway at the site. However, areas of concern have been remediated or evaluated, and the potential pathways noted.

(3/30/88 DAB/SAS) EPA recommends the following: NFA under CERCLA; site inspection by RCRA or another DEQ section to determine the extent and composition of the pond sludge and an appropriate practice for it.

(11/23/94 DD/SAS) Pond has been removed.

(1/10/01 KJR/SAS) Two evaporation ponds were located on the site while Puregro operated the facility. The ponds were removed in 1990. In 10/90, water and sediment samples were collected from the pond prior to removal. Results of the pesticide scan showed levels below detection limits for all constituents. Evidence indicated the pond was used to dispose of fertilizer rinsate only. As part of the pond decommissioning, approximately 400 cubic yards of pond sediments were removed and disposed of in the local solid waste landfill in fall 1991. DEQ's Site Assessment program performed an initial screening of the site in 1994, which identified three areas of concern: 1) An area where an accidental release of fertilizer rinsate had taken place. 2) An area located along the north central portion contained spent sandblast material. (The sandblast areas were addressed as part of compliance actions for the hazardous waste program's NON (ER-P-94-063). The material was determined to be non-hazardous based on knowledge of process. 3) An "old burn pile" identified in the northwest corner of the site. (The site map indicated heavy railroad ties and lumber had been burned there in the past.)
Accidental Release of Fertilizer Rinsate: During a complaint investigation, the contents of 32 2.5-gallon containers had been determined to have been emptied on the ground surface in the empty container storage area on 5/18/94. After the spill occurred, and prior to the EPA/DEQ investigation, some soil in the release area was excavated and placed in wooden containers. Samples of the excavated material and the spill site were collected during the 6/8/94 EPA/DEQ investigation. Analysis of the in-situ soils identified contaminant concentrations of Iprodione at 149 ppm, Permethrin at 45 ppm, Metalaxyl at 25 ppm, Eptam at 5 ppm, and Metribuzin at 0.1 ppm. The impacted soil stockpiled in wooden containers was removed and properly disposed of as hazardous waste in 1/95. To complete remedial activities, an additional 67 tons of impacted soil were excavated from the release area in 1/96. Confirmation soil samples were collected from the excavation and from areas potentially affected by runoff. Compounds of concern were not identified in soil samples collected from the potential runoff areas. No compounds of concern were identified in the five confirmation samples with the exception of metalaxyl (0.28 ppm) in one soil sample. Discussions with DEQ Hazardous Waste and Site Assessment program staff determined this concentration met site-specific cleanup standards and no further excavation was required. Old Burn Pile Areas: Soil samples were collected from two burn pile areas during site assessment activities in Spring 1995. No odors or stained soil were observed. Pesticides were not detected in soil samples collected from the two burn pile areas. Additional Areas of Concern: Two additional areas of concern were identified, an area where 7,000 gallons of rinsate was pumped in winter 1991 and a small area of stained soil. A soil sample was collected from the rinsate area and analyzed for pesticides and fertilizer. Two pesticides, 2,4-DDT (0.03 ppm) and trifluralin (0.19 ppm) were detected at levels less than their respective EPA Region 9 PRGs. Concentrations of the following were also detected: nitrate nitrogen (288 ppm), ammonia nitrogen (1,700 ppm), TKN (2,200 ppm), phosphorus (6,500 ppm), and potassium (1,300 ppm). Cleanup standards have not been assigned for these compounds in soil. A small area of stained soil was noted adjacent to the UPRR rail spur. A soil sample was collected and analyzed for TPH and SVOCs; TPH was detected at 220 ppm, and several SVOCs were detected, primarily PAHs. All detected SVOCs were less than residential PRGs assigned for each compound except for benzo(a)pyrene, which at 0.35 ppm slightly exceeded the industrial PRG remedial goal of 0.29 ppm for soil. RECOMMENDATION/ACTION: Areas identified during various inspections and investigations at the site have either been remediated or have been sampled and determined not to pose a significant threat to human health or the environment. The site is recommended for No Further Action pending public comment. The site is also recommended for removal from the Confirmed Release List.

(4/28/88 MER/SAS) The site contains 30 above-ground storage tanks (ASTs) and a wastewater drainage pond that is 75 feet long, 70 feet wide and 5 feet deep. Wastes associated with the water and sludge in the pond are unknown. The pond, constructed in 1976, is lined with bentonite. Prior to 1976, wastewater was probably dumped in the area that the pond now occupies. Pond wastewater evaporates, leaving behind a solid sludge. See Hazardous Releases for sampling data. (1/10/01 KJR/SAS) The Crop Production Services (CPS) site is an active, 7-acre fertilizer and pesticide retail facility. CPS purchased the facility from the Puregro Company on February 19, 1993. Puregro began operation at this site in 1968. In January 1996, CPS and Western Farm Service, Inc. merged and are now doing business as Western Farm Service. Puregro also operated the facility as a fertilizer and pesticide retailer. CPS is currently leasing the site from Union Pacific Railroad, which had used the site as a maintenance facility in the past.

(7/26/2012 KJR/SAS) On 7/23/2006, crystalline soil contamination was discovered on the USACE property next to the Western Farm Services property. A spill of an unknown substance had flowed across the Western Farm Services property onto the USACE property. Western Farms indicated a storm event 30 days earlier had overwhelmed the sump at the facility. The sump is used to catch plant wash down and truck clean out at wash pad. Approx 400 gallon of unknown strength fertilizer escaped to soils mixed with large volumes of water during the event.

See Also ECSI 821.

Comment:			

(7/28/06 DMC/SAS) Negotiations in progress. (1/4/07 KJR/VCP) RP joined ICP in October 2006. The following are excerpts from DEQ's 11/17/06 staff report:

Hazardous Waste Compliance Site Visit

A DEQ Hazardous Waste Compliance Inspector visited the site in July 2006 in response to a complaint reporting the mismanagement of used oil. During the site inspection, several areas of extensive petroleum contamination were documented in the vicinity of the site building. The property owner, Mr. Mathews, also indicated that two USTs were present on the site and were partially filled with turkey manure.

Remedial Action

As a result of the site inspection, Eastern Oregon Environmental Recovery was contracted to excavate, transport off-site, and properly disposal of the petroleum contaminated soil (PCS). About 469 tons of PCS were excavated and transported to Finely Buttes Landfill, near Boardman, for disposal. Excavation activities were performed in September 2006.

In addition, the two steel USTs were excavated and placed above ground on the property. The USTs appear to have had the capacity for about 10,000 gallons to 12,000 gallons. The USTs were not permitted with DEQ.

Soil Disposal Permitting

Prior to performing excavation activities, two soil samples were collected from stained surface soil areas and submitted for the following analysis: gasoline by NW Method TPH-Gx, diesel and heavy oil by NW Method TPH-Dx, and RCRA eight metals (arsenic, barium, cadmium, chromium, lead, selenium, mercury, and silver) by EPA Method 6020A. These areas were later excavated.

Used Oil Excavation

The used oil excavation extended to a maximum depth of 3.5 feet below ground surface (bgs). Groundwater was not encountered in the excavation. A total of five confirmation soil samples were collected from random locations throughout the used oil excavation. Confirmation soil samples were analyzed for gasoline, diesel, heavy oil, volatile organic compounds (VOCs) by EPA Method 8260B, polynuclear aromatic hydrocarbons (PAHs) by EPA Method 8270C, and total lead by EPA Method 6020A.

A concentration of diesel at 26.5 milligrams per kilograms (mg/kg) was detected in sample B2RNV. Concentrations of diesel were not detected in the remaining four soil samples.

Concentrations of total lead were detected in all five soil samples at levels ranging from 45.1 mg/kg to 86.6 mg/kg.

Concentrations of gasoline, heavy oil, VOCs, and PAHs were not detected in the five soil samples.

UST Excavation

The UST excavation extended to about 10 feet to 12 feet bgs. Groundwater was not encountered in the excavation. Four confirmation soil samples were collected from beneath the former UST locations and analyzed for gasoline, diesel, and total lead. Select samples were analyzed for heavy oil, VOCs, and PAHs.

Map Key	Number of Records	Direction	Distance (mi/ft)	Elev/Diff (ft)	Site	DB
---------	-------------------	-----------	------------------	----------------	------	----

Concentrations of diesel at 91.2 mg/kg and phenanthrene at 0.08 mg/kg were detected in soil sample T2N. Concentrations of diesel and PAHs were not detected in the other three soil samples analyzed for diesel and other two soil samples analyzed for PAHs.

Total lead was detected in all four soil samples at levels ranging from 53.2 mg/kg to 57.6 mg/kg.

Concentrations of gasoline, heavy oil, and VOCs were not detected in the soil samples analyzed for those parameters.

Risk Based Screening

The detected concentrations of diesel in confirmation soil samples are less than generic risk-based concentrations (RBCs) for residential pathways (the most stringent pathway) as listed in DEQ's Risk-Based Decision Making for the Remediation of Petroleum-Contaminated Sites (RBDM) guidance dated September 22, 2003.

Detected concentrations of total lead were less than generic RBCs for the residential soil ingestion, dermal contact, and inhalation pathway. However, all but one total lead concentration exceeded the leaching to groundwater pathway RBC of 30 mg/kg. Given the lowest total lead concentration (14.2 mg/kg) was detected in soil sample with the highest level of used oil (63,200 mg/kg), the consistent levels detected (45.1 mg/kg to 86.6 mg/kg) regardless of sample depth or location (likely indicating background levels), and the lack of groundwater, this pathway is not considered complete.

Cleanup levels have not been developed for phenanthrene.

Based on the available data and the preceding discussion, a no further action determination was proposed for the Mathews Property. A final decision concerning the no further action determination was made after a public comment period that ended January 2, 2007.

(Bob Schwarz, June 27, 2014) On May 5, 2014, DEQ reviewed the "Level 2 Preliminary Site Investigation, FFO-US730: Powerline Rd Intesection Improvements." This report is dated April 2014 and is attached.

Based on discussions with ODOT, and review of the PSI report, DEQ notes the following:

- ODOT collected 10 samples (seven composites and three discrete samples). These were analyzed for RCRA 8 metals, herbicides, and pesticides. Six of the 10 samples were also analyzed for diesel- and heavy oil-range petroleum hydrocarbons.
- Petroleum, herbicides and pesticides were not detected. Metals were below regional default background concentrations, with the exception of selenium. Selenium was found at concentrations up to 1.3 mg/kg, above the default background concentration of 0.46 mg/kg. DEQ does not publish risk based concentration (RBC) for selenium. However, USEPA publishes regional screening values. The residential regional screening value is 390 mg/kg.
- ODOT stated that they do not anticipate the need to excavate more than approximately 50 cubic yards. Because this is a net fill project, this soil will be placed within a road embankment and covered with clean fill.

Based on this information, ODOT proposed excavating the soil and placing it in the embankment. Because contaminant concentrations are below acceptable risk levels, and the estimated volume to be excavated is quite small, DEQ advised ODOT that 1) a solid waste letter of authorization is not required for this work. 2) if contamination is found during excavation that is not reflected by the sample results in their report, appropriate measures must be taken.

ODOT does not currently own the property but will be acquiring it for the project, under eminent domain authority.

Appendix: Database Descriptions

Environmental Risk Information Services (ERIS) can search the following databases. The extent of historical information varies with each database and current information is determined by what is publicly available to ERIS at the time of update. ERIS updates databases as set out in ASTM Standard E1527-13 and E1527-21, Section 8.1.8 Sources of Standard Source Information:

"Government information from nongovernmental sources may be considered current if the source updates the information at least every 90 days, or, for information that is updated less frequently than quarterly by the government agency, within 90 days of the date the government agency makes the information available to the public."

Standard Environmental Record Sources

Federal

National Priority List:

NPL

Sites on the United States Environmental Protection Agency (EPA)'s National Priorities List of the most serious uncontrolled or abandoned hazardous waste sites identified for possible long-term remedial action under the Superfund program. The NPL, which EPA is required to update at least once a year, is based primarily on the score a site receives from EPA's Hazard Ranking System. A site must be on the NPL to receive money from the Superfund Trust Fund for remedial action. Sites are represented by boundaries where available in the EPA Superfund Site Boundaries maintained by the Shared Enterprise Geodata and Services (SEGS). Site boundaries represent the footprint of a whole site, the sum of all of the Operable Units and the current understanding of the full extent of contamination; for Federal Facility sites, the total site polygon may be the Facility boundary. Where there is no polygon boundary data available for a given site, the site is represented as a point.

Government Publication Date: Mar 23, 2023

National Priority List - Proposed:

PROPOSED NPL

Sites proposed by the United States Environmental Protection Agency (EPA), the state agency, or concerned citizens for addition to the National Priorities List (NPL) due to contamination by hazardous waste and identified by the EPA as a candidate for cleanup because it poses a risk to human health and/or the environment. Sites are represented by boundaries where available in the EPA Superfund Site Boundaries maintained by the Shared Enterprise Geodata and Services (SEGS). Site boundaries represent the footprint of a whole site, the sum of all of the Operable Units and the current understanding of the full extent of contamination; for Federal Facility sites, the total site polygon may be the Facility boundary. Where there is no polygon boundary data available for a given site, the site is represented as a point.

Government Publication Date: Mar 23, 2023

Deleted NPL:

DELETED NPL

Sites deleted from the United States Environmental Protection Agency (EPA)'s National Priorities List. The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate. Sites are represented by boundaries where available in the EPA Superfund Site Boundaries maintained by the Shared Enterprise Geodata and Services (SEGS). Site boundaries represent the footprint of a whole site, the sum of all of the Operable Units and the current understanding of the full extent of contamination; for Federal Facility sites, the total site polygon may be the Facility boundary. Where there is no polygon boundary data available for a given site, the site is represented as a point.

Government Publication Date: Mar 23, 2023

SEMS List 8R Active Site Inventory:

SEMS

The U.S. Environmental Protection Agency's (EPA) Superfund Program has deployed the Superfund Enterprise Management System (SEMS), which integrates multiple legacy systems into a comprehensive tracking and reporting tool. This inventory contains active sites evaluated by the Superfund program that are either proposed to be or are on the National Priorities List (NPL) as well as sites that are in the screening and assessment phase for possible inclusion on the NPL. The Active Site Inventory Report displays site and location information at active SEMS sites. An active site is one at which site assessment, removal, remedial, enforcement, cost recovery, or oversight activities are being planned or conducted. This data includes SEMS sites from the List 8R Active file as well as applicable sites from the SEMS GIS/REST file layer obtained from EPA's Facility Registry Service.

Government Publication Date: Jan 25, 2023

SEMS List 8R Archive Sites:

[SEMS ARCHIVE](#)

The U.S. Environmental Protection Agency's (EPA) Superfund Enterprise Management System (SEMS) Archived Site Inventory displays site and location information at sites archived from SEMS. An archived site is one at which EPA has determined that assessment has been completed and no further remedial action is planned under the Superfund program at this time. This data includes sites from the List 8R Archived site file.

Government Publication Date: Jan 25, 2023

Inventory of Open Dumps, June 1985:

[ODI](#)

The Resource Conservation and Recovery Act (RCRA) provides for publication of an inventory of open dumps. The Act defines "open dumps" as facilities which do not comply with EPA's "Criteria for Classification of Solid Waste Disposal Facilities and Practices" (40 CFR 257).

Government Publication Date: Jun 1985

Comprehensive Environmental Response, Compensation and Liability Information System -

[CERCLIS](#)

CERCLIS:

Superfund is a program administered by the United States Environmental Protection Agency (EPA) to locate, investigate, and clean up the worst hazardous waste sites throughout the United States. CERCLIS is a database of potential and confirmed hazardous waste sites at which the EPA Superfund program has some involvement. It contains sites that are either proposed to be or are on the National Priorities List (NPL) as well as sites that are in the screening and assessment phase for possible inclusion on the NPL. The EPA administers the Superfund program in cooperation with individual states and tribal governments; this database is made available by the EPA.

Government Publication Date: Oct 25, 2013

EPA Report on the Status of Open Dumps on Indian Lands:

[IODI](#)

Public Law 103-399, The Indian Lands Open Dump Cleanup Act of 1994, enacted October 22, 1994, identified congressional concerns that solid waste open dump sites located on American Indian or Alaska Native (AI/AN) lands threaten the health and safety of residents of those lands and contiguous areas. The purpose of the Act is to identify the location of open dumps on Indian lands, assess the relative health and environment hazards posed by those sites, and provide financial and technical assistance to Indian tribal governments to close such dumps in compliance with Federal standards and regulations or standards promulgated by Indian Tribal governments or Alaska Native entities.

Government Publication Date: Dec 31, 1998

CERCLIS - No Further Remedial Action Planned:

[CERCLIS NFRAP](#)

An archived site is one at which EPA has determined that assessment has been completed and no further remedial action is planned under the Superfund program at this time. The Archive designation means that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL). This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

Government Publication Date: Oct 25, 2013

CERCLIS Liens:

[CERCLIS LIENS](#)

A Federal Superfund lien exists at any property where EPA has incurred Superfund costs to address contamination ("Superfund site") and has provided notice of liability to the property owner. A Federal CERCLA ("Superfund") lien can exist by operation of law at any site or property at which EPA has spent Superfund monies. This database is made available by the United States Environmental Protection Agency (EPA). This database was provided by the United States Environmental Protection Agency (EPA). Refer to SEMS LIEN as the current data source for Superfund Liens.

Government Publication Date: Jan 30, 2014

RCRA CORRACTS-Corrective Action:

[RCRA CORRACTS](#)

RCRA Info is the U.S. Environmental Protection Agency's (EPA) comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. At these sites, the Corrective Action Program ensures that cleanups occur. EPA and state regulators work with facilities and communities to design remedies based on the contamination, geology, and anticipated use unique to each site.

Government Publication Date: Jan 23, 2023

RCRA non-CORRACTS TSD Facilities:

[RCRA TSD](#)

RCRA Info is the U.S. Environmental Protection Agency's (EPA) comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. This database includes Non-Corrective Action sites listed as treatment, storage and/or disposal facilities of hazardous waste as defined by RCRA.

Government Publication Date: Jan 23, 2023

RCRA Generator List:

[RCRA LQG](#)

RCRA Info is the U.S. Environmental Protection Agency's (EPA) comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. RCRA Info replaces the data recording and reporting abilities of the Resource Conservation and Recovery Information System (RCRIS) and the Biennial Reporting System (BRS). A hazardous waste generator is any person or site whose processes and actions create hazardous waste (see 40 CFR 260.10). Large Quantity Generators (LQGs) generate 1,000 kilograms per month or more of hazardous waste or more than one kilogram per month of acutely hazardous waste.

Government Publication Date: Jan 23, 2023

RCRA Small Quantity Generators List:

[RCRA SQG](#)

RCRA Info is the U.S. Environmental Protection Agency's (EPA) comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. RCRA Info replaces the data recording and reporting abilities of the Resource Conservation and Recovery Information System (RCRIS) and the Biennial Reporting System (BRS). A hazardous waste generator is any person or site whose processes and actions create hazardous waste (see 40 CFR 260.10). Small Quantity Generators (SQGs) generate more than 100 kilograms, but less than 1,000 kilograms, of hazardous waste per month.

Government Publication Date: Jan 23, 2023

RCRA Very Small Quantity Generators List:

[RCRA VSQG](#)

RCRA Info is the U.S. Environmental Protection Agency's (EPA) comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. A hazardous waste generator is any person or site whose processes and actions create hazardous waste (see 40 CFR 260.10). Very Small Quantity Generators (VSQG) generate 100 kilograms or less per month of hazardous waste, or one kilogram or less per month of acutely hazardous waste. Additionally, VSQG may not accumulate more than 1,000 kilograms of hazardous waste at any time.

Government Publication Date: Jan 23, 2023

RCRA Non-Generators:

[RCRA NON GEN](#)

RCRA Info is the U.S. Environmental Protection Agency's (EPA) comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. RCRA Info replaces the data recording and reporting abilities of the Resource Conservation and Recovery Information System (RCRIS) and the Biennial Reporting System (BRS). A hazardous waste generator is any person or site whose processes and actions create hazardous waste (see 40 CFR 260.10). Non-Generators do not presently generate hazardous waste.

Government Publication Date: Jan 23, 2023

RCRA Sites with Controls:

[RCRA CONTROLS](#)

List of Resource Conservation and Recovery Act (RCRA) facilities with institutional controls in place. RCRA gives the U.S. Environmental Protection Agency (EPA) the authority to control hazardous waste from the "cradle-to-grave." This includes the generation, transportation, treatment, storage, and disposal of hazardous waste. RCRA also set forth a framework for the management of non-hazardous solid wastes. The 1986 amendments to RCRA enabled EPA to address environmental problems that could result from underground tanks storing petroleum and other hazardous substances.

Government Publication Date: Jan 23, 2023

Federal Engineering Controls-ECs:

[FED ENG](#)

This list of Engineering controls (ECs) is provided by the United States Environmental Protection Agency (EPA). ECs encompass a variety of engineered and constructed physical barriers (e.g., soil capping, sub-surface venting systems, mitigation barriers, fences) to contain and/or prevent exposure to contamination on a property. The EC listing includes remedy component data from Superfund decision documents issued in fiscal years 1982-2020 for applicable sites on the final or deleted on the National Priorities List (NPL); and sites with a Superfund Alternative Approach (SAA) Agreement in place. The only sites included that are not on the NPL; proposed for NPL; or removed from proposed NPL, are those with an SAA Agreement in place.

Government Publication Date: Feb 23, 2023

Federal Institutional Controls- ICs:

[FED INST](#)

This list of Institutional controls (ICs) is provided by the United States Environmental Protection Agency (EPA). ICs are non-engineered instruments, such as administrative and legal controls, that help minimize the potential for human exposure to contamination and/or protect the integrity of the remedy. Although it is EPA's expectation that treatment or engineering controls will be used to address principal threat wastes and that groundwater will be returned to its beneficial use whenever practicable, ICs play an important role in site remedies because they reduce exposure to contamination by limiting land or resource use and guide human behavior at a site. The IC listing includes remedy component data from Superfund decision documents issued in fiscal years 1982-2020 for applicable sites on the final or deleted on the National Priorities List (NPL); and sites with a Superfund Alternative Approach (SAA) Agreement in place. The only sites included that are not on the NPL; proposed for NPL; or removed from proposed NPL, are those with an SAA Agreement in place.

Government Publication Date: Feb 23, 2023

Land Use Control Information System:

LUCIS

The LUCIS database is maintained by the U.S. Department of the Navy and contains information for former Base Realignment and Closure (BRAC) properties across the United States.

Government Publication Date: Sep 1, 2006

Institutional Control Boundaries at NPL sites:

NPL IC

Boundaries of Institutional Control areas at sites on the United States Environmental Protection Agency (EPA)'s National Priorities List, or Proposed or Deleted, made available by the EPA's Shared Enterprise Geodata and Services (SEGS). United States Environmental Protection Agency (EPA)'s National Priorities List of the most serious uncontrolled or abandoned hazardous waste sites identified for possible long-term remedial action under the Superfund program. Institutional controls are non-engineered instruments such as administrative and legal controls that help minimize the potential for human exposure to contamination and/or protect the integrity of the remedy.

Government Publication Date: Mar 23, 2023

Emergency Response Notification System:

ERNS 1982 TO 1986

Database of oil and hazardous substances spill reports controlled by the National Response Center. The primary function of the National Response Center is to serve as the sole national point of contact for reporting oil, chemical, radiological, biological, and etiological discharges into the environment anywhere in the United States and its territories.

Government Publication Date: 1982-1986

Emergency Response Notification System:

ERNS 1987 TO 1989

Database of oil and hazardous substances spill reports controlled by the National Response Center. The primary function of the National Response Center is to serve as the sole national point of contact for reporting oil, chemical, radiological, biological, and etiological discharges into the environment anywhere in the United States and its territories.

Government Publication Date: 1987-1989

Emergency Response Notification System:

ERNS

Database of oil and hazardous substances spill reports made available by the United States Coast Guard National Response Center (NRC). The NRC fields initial reports for pollution and railroad incidents and forwards that information to appropriate federal/state agencies for response. These data contain initial incident data that has not been validated or investigated by a federal/state response agency.

Government Publication Date: Jan 16, 2023

The Assessment, Cleanup and Redevelopment Exchange System (ACRES) Brownfield Database:

FED BROWNFIELDS

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties protects the environment, reduces blight, and takes development pressures off greenspaces and working lands. This data is provided by the United States Environmental Protection Agency (EPA) and includes Brownfield sites from the Cleanups in My Community (CIMC) web application.

Government Publication Date: Sep 13, 2022

FEMA Underground Storage Tank Listing:

FEMA UST

The Federal Emergency Management Agency (FEMA) of the Department of Homeland Security maintains a list of FEMA owned underground storage tanks.

Government Publication Date: Dec 31, 2017

Facility Response Plan:

FRP

This listing contains facilities that have submitted Facility Response Plans (FRPs) to the U.S. Environmental Protection Agency (EPA). Facilities that could reasonably be expected to cause "substantial harm" to the environment by discharging oil into or on navigable waters are required to prepare and submit FRPs. Harm is determined based on total oil storage capacity, secondary containment and age of tanks, oil transfer activities, history of discharges, proximity to a public drinking water intake or sensitive environments. This listing includes FRP facilities from an applicable EPA FOIA file and Homeland Infrastructure Foundation-Level Data (HIFLD) data file.

Government Publication Date: Aug 8, 2022

Delisted Facility Response Plans:

DELISTED FRP

Facilities that once appeared in - and have since been removed from - the list of facilities that have submitted Facility Response Plans (FRP) to EPA. Facilities that could reasonably be expected to cause "substantial harm" to the environment by discharging oil into or on navigable waters are required to prepare and submit Facility Response Plans (FRPs). Harm is determined based on total oil storage capacity, secondary containment and age of tanks, oil transfer activities, history of discharges, proximity to a public drinking water intake or sensitive environments.

Government Publication Date: Aug 8, 2022

Historical Gas Stations:

[HIST GAS STATIONS](#)

This historic directory of service stations is provided by the Cities Service Company. The directory includes Cities Service filling stations that were located throughout the United States in 1930.

Government Publication Date: Jul 1, 1930

Petroleum Refineries:

[REFN](#)

List of petroleum refineries from the U.S. Energy Information Administration (EIA) Refinery Capacity Report. Includes operating and idle petroleum refineries (including new refineries under construction) and refineries shut down during the previous year located in the 50 States, the District of Columbia, Puerto Rico, the Virgin Islands, Guam, and other U.S. possessions. Survey locations adjusted using public data.

Government Publication Date: Aug 30, 2022

Petroleum Product and Crude Oil Rail Terminals:

[BULK TERMINAL](#)

List of petroleum product and crude oil rail terminals made available by the U.S. Energy Information Administration (EIA). Includes operable bulk petroleum product terminals located in the 50 States and the District of Columbia with a total bulk shell storage capacity of 50,000 barrels or more, and/or the ability to receive volumes from tanker, barge, or pipeline; also rail terminals handling the loading and unloading of crude oil that were active between 2017 and 2018. Petroleum product terminals comes from the EIA-815 Bulk Terminal and Blender Report, which includes working, shell in operation, and shell idle for several major product groupings. Survey locations adjusted using public data.

Government Publication Date: Jun 29, 2022

LIEN on Property:

[SEMS LIEN](#)

The U.S. Environmental Protection Agency's (EPA) Superfund Enterprise Management System (SEMS) provides Lien details on applicable properties, such as the Superfund lien on property activity, the lien property information, and the parties associated with the lien.

Government Publication Date: Jan 25, 2023

Superfund Decision Documents:

[SUPERFUND ROD](#)

This database contains a list of decision documents for Superfund sites. Decision documents serve to provide the reasoning for the choice of (or) changes to a Superfund Site cleanup plan. The decision documents include completed Records of Decision (ROD), ROD Amendments, Explanations of Significant Differences (ESD) for active and archived sites stored in the Superfund Enterprise Management System (SEMS), along with other associated memos and files. This information is maintained and made available by the U.S. Environmental Protection Agency.

Government Publication Date: Mar 23, 2023

Formerly Utilized Sites Remedial Action Program:

[DOE FUSRAP](#)

The U.S. Department of Energy (DOE) established the Formerly Utilized Sites Remedial Action Program (FUSRAP) in 1974 to remediate sites where radioactive contamination remained from the Manhattan Project and early U.S. Atomic Energy Commission (AEC) operations. The DOE Office of Legacy Management (LM) established long-term surveillance and maintenance (LTS&M) requirements for remediated FUSRAP sites. DOE evaluates the final site conditions of a remediated site on the basis of risk for different future uses. DOE then confirms that LTS&M requirements will maintain protectiveness.

Government Publication Date: Mar 4, 2017

State

Confirmed Release List/Inventory:

[CRL](#)

List of sites on the Oregon Department of Environmental Quality (DEQ)'s Confirmed Release Inventory, a subset of the Environmental Cleanup Site Information (ECSI) database. ECSI is the Cleanup Section's master database of sites with known or potential contamination. This database is state equivalent CERCLIS.

Government Publication Date: Mar 14, 2023

Hazardous Sites List:

[HSL](#)

Washington State Department of Ecology (DEC) records of sites that have been assessed and ranked using the Washington Ranking Method (WARM score) - a number between 1 and 5, where a score of 1 represents the highest level of risk and 5 the lowest. Some factors that enter into site hazard ranking include: the amount and type of contaminants present; how easily contaminants could come into contact with people and the environment; and the level of public concern. This database is state equivalent NPL.

Government Publication Date: Feb 27, 2023

Environmental Cleanup Site Information Database:

[ECSI](#)

The Department of Environmental Quality's (DEQ) Environmental Cleanup Program protects human health and the environment by identifying, investigating, and remediating sites contaminated with hazardous substances. This database is state equivalent CERCLIS.

Government Publication Date: Mar 14, 2023

Confirmed and Suspected Contaminated Sites List:

CSCSL

This list of Confirmed and Suspected Contaminated Sites is made available by the Washington State Department of Ecology (DEC). The listing includes sites being cleaned up, waiting to be cleaned up, or that need more investigation. Most contaminated sites are handled by the DEC's Toxics Cleanup Program and are cleaned up under Washington's environmental cleanup law, the Model Toxics Control Act (MTCOA). Property owners may clean up sites independently or under DEC supervision; the DEC can also clean up sites. This database is state equivalent CERCLIS.

Government Publication Date: Feb 27, 2023

Delisted Release List and Cleanup Sites:

DELISTED SHWS

This database contains a list of closed sites contaminated with hazardous substances that were removed from the Oregon Department of Environmental Quality (DEQ)'s, Environmental Cleanup Site Information (ECSI) database.

Government Publication Date: Mar 14, 2023

Delisted Confirmed and Suspected Contaminated Sites:

DELISTED SHWS

This database contains a list of Confirmed & Suspected Contaminated Sites that were removed from the Washington State Department of Ecology (DEC).

Government Publication Date: Feb 27, 2023

Solid Waste Facilities and Landfills:

SWF/LF

The Department of Environmental Quality (DEQ) makes a list available of all permitted solid waste and landfill facilities.

Government Publication Date: Oct 7, 2020

No Further Action Sites List:

CSCSL NFA

A list of sites previously on the Washington State Department of Ecology (DEC) Confirmed and Suspected Contaminated Sites List (CSCSL) that have received a No Further Action (NFA) determination.

Government Publication Date: Feb 27, 2023

Historic Closed and Terminated Disposal Sites:

HIST SWF

A list of historic, closed solid waste and landfill facilities made available by the Department of Environmental Quality (DEQ). Public Land Survey System (PLSS) locations provided by the source are subject to accuracy limitations inherent to the PLSS system.

Government Publication Date: Jun 1, 1986

Solid Waste Facility Database:

SWF/LF

List of permitted solid waste and landfill facilities made available by the Washington Department of Ecology (DEC).

Government Publication Date: Sep 8, 2022

Recycling Facilities:

RECYCLERS

The Washington State Department of Ecology maintains this database of recycling opportunities available in Washington State.

Government Publication Date: Nov 15, 2022

Underground Storage Tank Cleanup List:

LUST

This inventory of leaking underground storage tanks (LUSTs) reported to the Oregon Department of Environmental Quality (DEQ), includes records made available via public records request, as well as LUST sites from the DEQ, in partnership with the Oregon Health Authority, Drinking Water Protection Program Map Viewer and the DEQ Facility Profiler-Lite Map Viewer.

Government Publication Date: Jan 9, 2023

Delisted Leaking Storage Tanks:

DELISTED LST

This database contains a list of leaking storage tank sites that were removed from the Oregon Department of Environmental Quality (DEQ).

Government Publication Date: Jan 9, 2023

Solid Waste Tire Facilities:

WASTE TIRE

The Washington State Department of Ecology maintains this database of waste tire recycling opportunities available in Washington State.

Government Publication Date: Mar 23, 2023

Underground Storage Tank (UST) Facilities:

UST

List of underground storage tanks made available by the Oregon Department of Environmental Quality (DEQ), and Oregon State Police (OSP), Oregon State Fire Marshall (OSFM). DEQ provides records relating to Underground Storage Tank Facility, UST Facilities with Operating Certificates, and Facilities with Temporary Closure Certificates and Facilities not in Operational Compliance. OSP, OSFM provides chemical information stored in Underground Storage Tanks.

Government Publication Date: Mar 9, 2023

Leaking Underground Storage Tank (LUST) List:

LUST

Leaking Underground Storage Tank (LUST) list made available by the Washington Department of Ecology (DEC) contains information about underground storage tank facilities that require cleanup and their cleanup history.

Government Publication Date: Feb 27, 2023

Petroleum Technical Assistance Program:

LUST PTAP

Under the State of Washington's cleanup law, qualifying petroleum contaminated sites can apply for the Pollution Liability Insurance Agency's (PLIA) Petroleum Technical Assistance Program (PTAP). Sites under the PTAP may be provided with informal advice and technical assistance on the requirements of the Model Toxics Control Act (MTCA), which is the state's cleanup law. PLIA also provides written opinions on independent remedial actions on qualifying petroleum cleanup sites: No Further Action (NFA), Further Action (FA), and Partial Sufficiency (PS).

Government Publication Date: Jun 21, 2022

Drinking Water Protection Program UST:

UST DWP

A list of underground storage tank (UST) locations from the Drinking Water Protection Interactive Map Viewer made available by the Oregon Department of Environmental Quality (DEQ), in partnership with the Oregon Health Authority's Drinking Water Protection Program.

Government Publication Date: Mar 9, 2023

Hazardous Substance Information System:

HSIS

This database contains detailed information regarding the storage of hazardous substances in facilities located throughout the State of Oregon, collected through the Hazardous Substance Information Survey. It is made available by the Oregon Office of State Fire Marshal's (OSFM), Community Right to Know (CR2K) Services Unit.

Government Publication Date: Sep 5, 2017

UST Loan and Grant Program:

UST LOAN

List of sites that have applied to the Pollution Liability Insurance Agency's (PLIA) UST Loan and Grant Program. PLIA partners with the Washington State Department of Health (DOH) to provide loans or grants to owners or operators of underground storage tank (UST) facilities, who wish to: upgrade/replace infrastructure, clean up contamination, or close a UST. Within the program, PLIA provides oversight and technical assistance, while the DOH operates the lending/repayment process.

Government Publication Date: Nov 12, 2021

Heating Oil Technical Assistance Program:

LST HOT

Within the Pollution Liability Insurance Agency's (PLIA) various programs, the Heating Oil Technical Assistance Program (HOTAP) provides assistance to owners and operators of active and abandoned heating oil tanks if there is a suspected release or contamination. PLIA provides services including: written opinions, observations of testing, site assessments, and reviews of the results of reports and other appropriate activities. Information in some records has been redacted by the Pollution Liability Insurance Agency under Washington State Legislature RCW 70.149.080. As of March 4, 2022 the PLIA stopped maintaining this list.

Government Publication Date: Jun 22, 2022

Aboveground Storage Tanks:

AST

This list of registered aboveground storage tanks is made available by the Oregon State Police (OSP), Office of State Fire Marshal (OSFM).

Government Publication Date: Mar 9, 2023

Drinking Water Protection Program AST:

AST DWP

A list of aboveground storage tank (AST) locations from the Drinking Water Protection Interactive Map Viewer made available by the Oregon Department of Environmental Quality (DEQ), in partnership with the Oregon Health Authority's Drinking Water Protection Program.

Government Publication Date: Mar 9, 2023

Underground Storage Tanks:

UST

List of Underground Storage Tanks (USTs) made available by Washington Department of Ecology (DEC). The DEC regulates tanks at facilities including gas stations, industries, commercial properties and governmental entities. The DEC works to ensure these tanks are installed, managed, and monitored in a manner that prevents releases into the environment.

Government Publication Date: Feb 27, 2023

Delisted Leaking Storage Tanks:

DELISTED LST

List of leaking storage tanks made available by the Washington Department of Ecology (DEC). A record would be removed if it violated the Facility Oil Handling Standards. This list contains all the records that been removed from the storage tank list.

Government Publication Date: Feb 27, 2023

Delisted Storage Tanks:

DTNK

List of sites that once appeared on - and have since been removed from - either list of UST or AST storage tank sites, or the list of Community Right to Know Hazardous Substances storage (HSIS) made available by the Oregon Department of Environmental Quality (DEQ) or the Office of the State Fire Marshall.

Government Publication Date: Mar 9, 2023

Heating Oil Tank Clean Decommissioning Sites:

TANK HOT DECOM

List of Heating Oil Tank (HOT) Clean Decommissioning Sites maintained by the HOT Program, Department of Environmental Quality (DEQ). Sites with former heating oil tanks that have a registered certificate of voluntary decommissioning (started March 2000) are filed with DEQ. Tanks on this list were closed following DEQ rules and a leak was not found.

Government Publication Date: Nov 10, 2022

Aboveground Storage Tanks:

AST

List of aboveground storage tanks (ASTs) made available by the Washington Department of Ecology (DEC). This list includes many of the largest petroleum containing ASTs in Washington state, but there are many ASTs in many different types of services (including, for example, hydrocarbon storage), that are not subject to regulation and are not registered by the DEC. There is no inclusive AST regulation in Washington state, and the Department of Ecology ceased maintenance of this list in December 2015.

Government Publication Date: Dec 14, 2015

Spills Program Regulated Facilities:

AST SPL PREV

List of Class 1, 2, 3, and 4 regulated facilities. The Washington Department of Ecology regulates the equipment and oil transfer, storage, and handling at facilities to ensure environmental and public health. Depending on their classification (Class 1 Large facilities such as refineries, refueling terminals, and pipelines; Class 2 and Class 3 facilities that transfer oil; and Class 4 Marinas and other facilities that transfer oil to non-recreation vessels with a fuel capacity of less than 10,500 gallons), these facilities are required to have some type of spill prevention plan.

Government Publication Date: Jan 6, 2023

Engineering Controls Reported in the ECSI Database:

ENG

The Department of Environmental Quality (DEQ) makes a list available of sites that have engineering controls in place. Engineering controls are physical measures designed to prevent or minimize exposure to hazardous substances remaining on-site. Engineering controls may include such measures as fencing, capping, horizontal or vertical barriers, hydraulic controls, or provision of clean water supplies.

Government Publication Date: Mar 14, 2023

Delisted Storage Tanks:

DELISTED TNK

List of aboveground storage tanks made available by the Washington Department of Ecology (DEC). A record would be removed if it violated the Facility Oil Handling Standards. This list contains all the records that been removed from the storage tank list.

Government Publication Date: Apr 2, 2023

Institutional Controls Reported in the ECSI Database:

INST

The Department of Environmental Quality (DEQ) makes a list available of sites that have institutional controls in place. Institutional controls are legal or administrative tools to prevent unacceptable exposures to contamination left in place at the completion of removal or remedial actions. Common examples are restricting groundwater use or preventing residential uses of a property.

Government Publication Date: Mar 14, 2023

Voluntary Cleanup Program Sites:

VCP

The Department of Environmental Quality (DEQ) created its Voluntary Cleanup Program (VCP) to provide oversight to property owners and others wishing to investigate and clean up hazardous substance sites in a voluntary, cooperative manner. The goal of the program is to increase the number of remediated sites by streamlining the cleanup process while ensuring compliance with Oregon environmental regulations.

Government Publication Date: Nov 30, 2022

Environmental Covenants Institutional Controls:

INST

List of sites that have institutional controls or environmental covenants (64.70 RCW Uniform Environmental Covenants Act) made available by the State of Washington Department of Ecology. Institutional controls are administrative or legal measures used to prevent activities that may compromise the integrity of a cleanup action. They are meant to prevent exposure to contamination remaining on site. Institutional controls may include environmental covenants (also known as 'deed restrictions'), zoning restrictions, public health advisories, or other administrative tools. The most common institutional control is an environmental covenant. Environmental covenants are legal recorded documents that typically limit certain uses of the property.

Government Publication Date: Feb 27, 2023

Environmental Cleanups on Former or Current Brownfields:

BROWNFIELDS

List of Brownfields sites made available by the Department of Environmental Quality (DEQ). A brownfield is a vacant or underused property where actual or perceived environmental contamination complicates its expansion or redevelopment.

Government Publication Date: Mar 14, 2023

Voluntary Cleanup Program:

VCP

List of sites under the Voluntary Cleanup Program (VCP) made available by the Washington Department of Ecology (DEC). The VCP is an option for cleaning up hazardous waste sites under the state's cleanup law.

Government Publication Date: Feb 27, 2023

Brownfields Program:

BROWNFIELDS

List of Brownfields sites made available by the Washington Department of Ecology (DEC). Brownfield sites are abandoned or underused properties where potential liability due to environmental contamination and cleanup costs complicate re-development efforts.

Government Publication Date: Feb 27, 2023

Tribal

Leaking Underground Storage Tanks on Tribal/Indian Lands:

INDIAN LUST

This list of leaking underground storage tanks (LUSTs) on Tribal/Indian Lands in Region 10, which includes Oregon, is made available by the United States Environmental Protection Agency (EPA).

Government Publication Date: Nov 23, 2022

Leaking Underground Storage Tanks on Tribal/Indian Lands:

INDIAN LUST

This list of leaking underground storage tanks (LUSTs) on Tribal/Indian Lands in Region 10, which includes Washington, is made available by the United States Environmental Protection Agency (EPA).

Government Publication Date: Nov 23, 2022

Underground Storage Tanks on Tribal/Indian Lands:

INDIAN UST

This list of underground storage tanks (USTs) on Tribal/Indian Lands in Region 10, which includes Oregon, is made available by the United States Environmental Protection Agency (EPA).

Government Publication Date: Nov 23, 2022

Underground Storage Tanks on Tribal/Indian Lands:

INDIAN UST

This list of underground storage tanks (USTs) on Tribal/Indian Lands in Region 10, which includes Washington, is made available by the United States Environmental Protection Agency (EPA).

Government Publication Date: Nov 23, 2022

Delisted Tribal Leaking Storage Tanks:

DELISTED INDIAN LST

Leaking Underground Storage Tank (LUST) facilities which once appeared on - and have since been removed from - the Regional Tribal/Indian LUST lists made available by the United States Environmental Protection Agency (EPA).

Government Publication Date: Apr 19, 2023

Delisted Tribal Underground Storage Tanks:

DELISTED INDIAN UST

Underground Storage Tank (UST) facilities which once appeared on - and have since been removed from - the Regional Tribal/Indian UST lists made available by the United States Environmental Protection Agency (EPA).

Government Publication Date: Apr 19, 2023

County

No County databases were selected to be included in the search.

Additional Environmental Record Sources

Federal

Facility Registry Service/Facility Index:

[FINDS/FRS](#)

The Facility Registry Service (FRS) is a centrally managed database that identifies facilities, sites, or places subject to environmental regulations or of environmental interest. FRS creates high-quality, accurate, and authoritative facility identification records through rigorous verification and management procedures that incorporate information from program national systems, state master facility records, and data collected from EPA's Central Data Exchange registrations and data management personnel. This list is made available by the Environmental Protection Agency (US EPA).

Government Publication Date: Aug 18, 2022

Toxics Release Inventory (TRI) Program:

[TRIS](#)

The U.S. Environmental Protection Agency's Toxics Release Inventory (TRI) is a database containing data on disposal or other releases of toxic chemicals from U.S. facilities and information about how facilities manage those chemicals through recycling, energy recovery, and treatment. There are currently 770 individually listed chemicals and 33 chemical categories covered by the TRI Program. Facilities that manufacture, process or otherwise use these chemicals in amounts above established levels must submit annual reporting forms for each chemical. Note that the TRI chemical list does not include all toxic chemicals used in the U.S. One of TRI's primary purposes is to inform communities about toxic chemical releases to the environment.

Government Publication Date: Oct 19, 2022

PFOA/PFOS Contaminated Sites:

[PFAS NPL](#)

List of National Priorities List (NPL) and related Superfund Alternative Agreement (SAA) sites where PFOA or PFOS contaminants have been found in water and/or soil. The site listing is provided by the Federal Environmental Protection Agency (EPA).

Government Publication Date: Mar 28, 2023

Federal Agency Locations with Known or Suspected PFAS Detections:

[PFAS FED SITES](#)

List of Federal agency locations with known or suspected detections of Per- and Polyfluoroalkyl Substances (PFAS), made available by the U.S. Environmental Protection Agency (EPA) in their PFAS Analytic Tools data. EPA outlines that these data are gathered from several federal entities, such as the Federal Superfund program, Department of Defense (DOD), National Aeronautics and Space Administration, Department of Transportation, and Department of Energy. Sites on this list do not necessarily reflect the source/s of contamination and detections do not indicate level of risk or human exposure at the site. Agricultural notifications in this data are limited to DOD sites only. At this time, the EPA is aware that this list is not comprehensive of all Federal agencies.

Government Publication Date: Jun 30, 2022

SSEHRI PFAS Contamination Sites:

[PFAS SSEHRI](#)

This PFAS Contamination Site Tracker database is compiled by the Social Science Environmental Health Research Institute (SSEHRI) at Northeastern University. According to the SSEHRI, the database records qualitative and quantitative data from each known site of PFAS contamination, including timeline of discovery, sources, levels, health impacts, community response, and government response. The goal of this database is to compile information and support public understanding of the rapidly unfolding issue of PFAS contamination. All data presented was extracted from government websites, news articles, or publicly available documents, and this is cited in the tracker. Disclaimer: The source conveys this database undergoes regular updates as new information becomes available, some sites may be missing and/or contain information that is incorrect or outdated, as well as their information represents all contamination sites SSEHRI is aware of, not all possible contamination sites. This data is not intended to be used for legal purposes. Limited location details are available with this data. Access the following for the most current informations <https://pfasproject.com/pfas-contamination-site-tracker/>

Government Publication Date: Dec 12, 2019

National Response Center PFAS Spills:

[ERNS PFAS](#)

National Response Center (NRC) calls from 1990 to the most recent complete calendar year where there is indication of Aqueous Film Forming Foam (AFFF) usage. NRC calls may reference AFFF usage in the "Material Involved" or "Incident Description" fields. Data made available by the US Environmental Protection Agency (EPA). Disclaimer: dataset may include initial or misidentified incident data not yet validated or investigated by a federal/state response agency.

Government Publication Date: Feb 23, 2022

PFAS NPDES Discharge Monitoring:

[PFAS NPDES](#)

This list of National Pollutant Discharge Elimination System (NPDES) permitted facilities with required monitoring for Per- and Polyfluoroalkyl (PFAS) Substances is made available via the U.S. Environmental Protection Agency (EPA)'s PFAS Analytic Tools. Any point-source wastewater discharger to waters of the United States must have a NPDES permit, which defines a set of parameters for pollutants and monitoring to ensure that the discharge does not degrade water quality or impair human health. This list includes NPDES permitted facilities associated with permits that monitor for Per- and Polyfluoroalkyl Substances (PFAS), limited to the years 2007 - present. EPA further advises the following regarding these data: currently, fewer than half of states have required PFAS monitoring for at least one of their permittees, and fewer states have established PFAS effluent limits for permittees. For states that may have required monitoring, some reporting and data transfer issues may exist on a state-by-state basis.

Government Publication Date: Feb 19, 2023

Perfluorinated Alkyl Substances (PFAS) from Toxic Release Inventory:

[PFAS TRI](#)

List of Toxics Release Inventory (TRI) facilities at which the reported chemical is a per- or polyfluoroalkyl (PFAS) substance included in the U.S. Environmental Protection Agency's (EPA) consolidated PFAS Master List of PFAS Substances. Encompasses Toxics Release Inventory records included in the EPA PFAS Analytic Tools. The EPA's TRI database currently tracks information on disposal or releases of 770 individually listed toxic chemicals and 33 chemical categories from thousands of U.S. facilities and details about how facilities manage those chemicals through recycling, energy recovery, and treatment.

Government Publication Date: Oct 19, 2022

Perfluorinated Alkyl Substances (PFAS) Water Quality:

[PFAS WATER](#)

The Water Quality Portal (WQP) is a cooperative service sponsored by the United States Geological Survey (USGS), the Environmental Protection Agency (EPA), and the National Water Quality Monitoring Council (NWQMC). This listing includes records from the Water Quality Portal where the characteristic (environmental measurement) is in the Environmental Protection Agency (EPA)'s consolidated Master List of PFAS Substances.

Government Publication Date: Jul 20, 2020

PFAS TSCA Manufacture and Import Facilities:

[PFAS TSCA](#)

The U.S. Environmental Protection Agency (EPA) issued the Chemical Data Reporting (CDR) Rule under the Toxic Substances Control Act (TSCA) and requires chemical manufacturers and facilities that manufacture or import chemical substances to report data to EPA. This list is specific only to TSCA Manufacture and Import Facilities with reported per- and poly-fluoroalkyl (PFAS) substances. Data file is sourced from EPA's PFAS Analytic Tools TSCA dataset which includes CDR/Inventory Update Reporting data from 1998 up to 2020. Disclaimer: This data file includes production and importation data for chemicals identified in EPA's CompTox Chemicals Dashboard list of PFAS without explicit structures and list of PFAS structures in DSSTox. Note that some regulations have specific chemical structure requirements that define PFAS differently than the lists in EPA's CompTox Chemicals Dashboard. Reporting information on manufactured or imported chemical substance amounts should not be compared between facilities, as some companies claim Chemical Data Reporting Rule data fields for PFAS information as Confidential Business Information.

Government Publication Date: Jan 5, 2023

PFAS Waste Transfers from RCRA e-Manifest :

[PFAS E-MANIFEST](#)

This Per- and Poly-Fluoroalkyl Substances (PFAS) Waste Transfers dataset is made available via the U.S. Environmental Protection Agency's (EPA) PFAS Analytic Tools. Every shipment of hazardous waste in the U.S. must be accompanied by a shipment manifest, which is a critical component of the cradle-to-grave tracking of wastes mandated by the Resource Conservation and Recovery Act (RCRA). According to the EPA, currently no Federal Waste Code exists for any PFAS compounds. To work around the lack of PFAS waste codes in the RCRA database, EPA developed the PFAS Transfers dataset by mining e-Manifest records containing at least one of these common PFAS keywords: • PFAS • PFOA • PFOS • PERFL • AFFF • GENX • GEN-X (plus the Vermont state-specific waste codes). Limitations: Amount or concentration of PFAS being transferred cannot be determined from the manifest information. Keyword searches may misidentify some manifest records that do not contain PFAS. This dataset should also not be considered to be exhaustive of all PFAS waste transfers.

Government Publication Date: Apr 9, 2023

PFAS Industry Sectors:

[PFAS IND](#)

This Per- and Poly-Fluoroalkyl Substances (PFAS) Industry Sectors dataset is made available via the U.S. Environmental Protection Agency's (EPA) PFAS Analytic Tools. The EPA developed the dataset from various sources that show which industries may be handling PFAS including: EPA's Enforcement and Compliance History Online (ECHO) records restricted to potential PFAS-handling industry sectors; ECHO records for Fire Training Sites identified where fire-fighting foam may have been used in training exercises; and 14 CFR Part 139 Airports compiled from historic and current records from the FAA Airport Data and Information Portal. Since July 2006, all certificated Part 139 Airports are required to have fire-fighting foam onsite that meet certain military specifications, which to date have been fluorinated (Aqueous Film Forming Foam). Limitations: Inclusion in this dataset does not indicate that PFAS are being manufactured, processed, used, or released by the facility. Listed facilities potentially handle PFAS based on their industrial profile, but are unconfirmed by the EPA. Keyword searches in ECHO for Fire Training sites may misidentify some facilities and should not be considered to be an exhaustive list of fire training facilities in the U.S.

Government Publication Date: Apr 16, 2023

Hazardous Materials Information Reporting System:

HMIRS

US DOT - Department of Transportation Pipeline and Hazardous Materials Safety Administration (PHMSA) Incidents Reports Database taken from Hazmat Intelligence Portal, U.S. Department of Transportation.

Government Publication Date: Sep 1, 2020

National Clandestine Drug Labs:

NCDL

The U.S. Department of Justice ("the Department"), Drug Enforcement Administration (DEA), provides this data as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy.

Government Publication Date: Feb 8, 2023

Toxic Substances Control Act:

TSCA

The Environmental Protection Agency (EPA) is amending the Toxic Substances Control Act (TSCA) section 8(a) Inventory Update Reporting (IUR) rule and changing its name to the Chemical Data Reporting (CDR) rule.

The CDR enables EPA to collect and publish information on the manufacturing, processing, and use of commercial chemical substances and mixtures (referred to hereafter as chemical substances) on the TSCA Chemical Substance Inventory (TSCA Inventory). This includes current information on chemical substance production volumes, manufacturing sites, and how the chemical substances are used. This information helps the Agency determine whether people or the environment are potentially exposed to reported chemical substances. EPA publishes submitted CDR data that is not Confidential Business Information (CBI).

Government Publication Date: Apr 11, 2019

Hist TSCA:

HIST TSCA

The Environmental Protection Agency (EPA) is amending the Toxic Substances Control Act (TSCA) section 8(a) Inventory Update Reporting (IUR) rule and changing its name to the Chemical Data Reporting (CDR) rule.

The 2006 IUR data summary report includes information about chemicals manufactured or imported in quantities of 25,000 pounds or more at a single site during calendar year 2005. In addition to the basic manufacturing information collected in previous reporting cycles, the 2006 cycle is the first time EPA collected information to characterize exposure during manufacturing, processing and use of organic chemicals. The 2006 cycle also is the first time manufacturers of inorganic chemicals were required to report basic manufacturing information.

Government Publication Date: Dec 31, 2006

FTTS Administrative Case Listing:

FTTS ADMIN

An administrative case listing from the Federal Insecticide, Fungicide, & Rodenticide Act (FIFRA) and Toxic Substances Control Act (TSCA), together known as FTTS. This database was obtained from the Environmental Protection Agency's (EPA) National Compliance Database (NCDB). The FTTS and NCDB was shut down in 2006.

Government Publication Date: Jan 19, 2007

FTTS Inspection Case Listing:

FTTS INSP

An inspection case listing from the Federal Insecticide, Fungicide, & Rodenticide Act (FIFRA) and Toxic Substances Control Act (TSCA), together known as FTTS. This database was obtained from the Environmental Protection Agency's (EPA) National Compliance Database (NCDB). The FTTS and NCDB was shut down in 2006.

Government Publication Date: Jan 19, 2007

Potentially Responsible Parties List:

PRP

Early in the site cleanup process, the U.S. Environmental Protection Agency (EPA) conducts a search to find the Potentially Responsible Parties (PRPs). The EPA looks for evidence to determine liability by matching wastes found at the site with parties that may have contributed wastes to the site. This listing contains PRPs, Noticed Parties, at sites in the EPA's Superfund Enterprise Management System (SEMS).

Government Publication Date: Jan 25, 2023

State Coalition for Remediation of Drycleaners Listing:

SCRD DRYCLEANER

The State Coalition for Remediation of Drycleaners (SCRD) was established in 1998, with support from the U.S. Environmental Protection Agency (EPA) Office of Superfund Remediation and Technology Innovation. Coalition members are states with mandated programs and funding for drycleaner site remediation. Current members are Alabama, Connecticut, Florida, Illinois, Kansas, Minnesota, Missouri, North Carolina, Oregon, South Carolina, Tennessee, Texas, and Wisconsin. Since 2017, the SCRD no longer maintains this data, refer to applicable state source data where available.

Government Publication Date: Nov 08, 2017

Integrated Compliance Information System (ICIS):

ICIS

The U.S. Environmental Protection Agency's Enforcement and Compliance History Online system incorporates data from the Integrated Compliance Information System - National Pollutant Discharge Elimination System (ICIS-NPDES). ICIS-NPDES is an information management system maintained by the Office of Compliance to track permit compliance and enforcement status of facilities regulated by the NPDES under the Clean Water Act. This data includes permit, inspection, violation and enforcement action information for applicable ICIS records.

Government Publication Date: Oct 15, 2022

Drycleaner Facilities:

[FED DRYCLEANERS](#)

A list of drycleaner facilities from Enforcement and Compliance History Online (ECHO) data as made available by the U.S. Environmental Protection Agency (EPA), sourced from the ECHO Exporter file. The EPA tracks facilities that possess NAIC and SIC codes that classify businesses as drycleaner establishments.

Government Publication Date: Dec 11, 2022

Delisted Drycleaner Facilities:

[DELISTED FED DRY](#)

List of sites removed from the list of Drycleaner Facilities (sites in the EPA's Integrated Compliance Information System (ICIS) with NAIC or SIC codes identifying the business as a drycleaner establishment).

Government Publication Date: Dec 11, 2022

Formerly Used Defense Sites:

[FUDS](#)

Formerly Used Defense Sites (FUDS) are properties that were formerly owned by, leased to, or otherwise possessed by and under the jurisdiction of the Secretary of Defense prior to October 1986, where the Department of Defense (DOD) is responsible for an environmental restoration. The FUDS Annual Report to Congress (ARC) is published by the U.S. Army Corps of Engineers (USACE). This data is compiled from the USACE's Geospatial FUDS data layers and Homeland Infrastructure Foundation-Level Data (HIFLD) FUDS dataset.

Government Publication Date: Jul 12, 2022

FUDS Munitions Response Sites:

[FUDS MRS](#)

Boundaries of Munitions Response Sites (MRS), published with the Formerly Used Defense Sites (FUDS) Annual Report to Congress (ARC) by the U.S. Army Corps of Engineers (USACE). An MRS is a discrete location within a Munitions response area (MRA) that is known to require a munitions response. An MRA means any area on a defense site that is known or suspected to contain unexploded ordnance (UXO), discarded military munitions (DMM), or munitions constituents (MC). This data is compiled from the USACE's Geospatial MRS data layers and Homeland Infrastructure Foundation-Level Data (HIFLD) MRS dataset.

Government Publication Date: Jul 12, 2022

Former Military Nike Missile Sites:

[FORMER NIKE](#)

This information was taken from report DRXTH-AS-IA-83A016 (Historical Overview of the Nike Missile System, 12/1984) which was performed by Environmental Science and Engineering, Inc. for the U.S. Army Toxic and Hazardous Materials Agency Assessment Division. The Nike system was deployed between 1954 and the mid-1970's. Among the substances used or stored on Nike sites were liquid missile fuel (JP-4); starter fluids (UDKH, aniline, and furfuryl alcohol); oxidizer (IRFNA); hydrocarbons (motor oil, hydraulic fluid, diesel fuel, gasoline, heating oil); solvents (carbon tetrachloride, trichloroethylene, trichloroethane, stoddard solvent); and battery electrolyte. The quantities of material a disposed of and procedures for disposal are not documented in published reports. Virtually all information concerning the potential for contamination at Nike sites is confined to personnel who were assigned to Nike sites. During deactivation most hardware was shipped to depot-level supply points. There were reportedly instances where excess materials were disposed of on or near the site itself at closure. There was reportedly no routine site decontamination.

Government Publication Date: Dec 2, 1984

PHMSA Pipeline Safety Flagged Incidents:

[PIPELINE INCIDENT](#)

A list of flagged pipeline incidents made available by the U.S. Department of Transportation (US DOT) Pipeline and Hazardous Materials Safety Administration (PHMSA). PHMSA regulations require incident and accident reports for five different pipeline system types.

Government Publication Date: Mar 31, 2021

Material Licensing Tracking System (MLTS):

[MLTS](#)

A list of sites that store radioactive material subject to the Nuclear Regulatory Commission (NRC) licensing requirements. This list is maintained by the NRC. As of September 2016, the NRC no longer releases location information for sites. Site locations were last received in July 2016.

Government Publication Date: May 11, 2021

Historic Material Licensing Tracking System (MLTS) sites:

[HIST MLTS](#)

A historic list of sites that have inactive licenses and/or removed from the Material Licensing Tracking System (MLTS). In some cases, a site is removed from the MLTS when the state becomes an "Agreement State". An Agreement State is a State that has signed an agreement with the Nuclear Regulatory Commission (NRC) authorizing the State to regulate certain uses of radioactive materials within the State.

Government Publication Date: Jan 31, 2010

Mines Master Index File:

[MINES](#)

The Master Index File (MIF) is provided by the United State Department of Labor, Mine Safety and Health Administration (MSHA). This file, which was originally created in the 1970's, contained many Mine-IDs that were invalid. MSHA removes invalid IDs from the MIF upon discovery. MSHA applicable data includes the following: all Coal and Metal/Non-Metal mines under MSHA's jurisdiction since 1/1/1970; mine addresses for all mines in the database except for Abandoned mines prior to 1998 from MSHA's legacy system (addresses may or may not correspond with the physical location of the mine itself); violations that have been assessed penalties as a result of MSHA inspections beginning on 1/1/2000; and violations issued as a result of MSHA inspections conducted beginning on 1/1/2000.

Government Publication Date: Nov 7, 2022

Surface Mining Control and Reclamation Act Sites:

[SMCRA](#)

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by the Office of Surface Mining Reclamation and Enforcement (OSMRE) to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of Abandoned Mine Land (AML) impacts, as well as information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

Government Publication Date: Aug 18, 2022

Mineral Resource Data System:

[MRDS](#)

The Mineral Resource Data System (MRDS) is a collection of reports describing metallic and nonmetallic mineral resources throughout the world. Included are deposit name, location, commodity, deposit description, geologic characteristics, production, reserves, resources, and references. This database contains the records previously provided in the Mineral Resource Data System (MRDS) of USGS and the Mineral Availability System/Mineral Industry Locator System (MAS/MILS) originated in the U.S. Bureau of Mines, which is now part of USGS. The USGS has ceased systematic updates of the MRDS database with their focus more recently on deposits of critical minerals while providing a well-documented baseline of historical mine locations from USGS topographic maps.

Government Publication Date: Mar 15, 2016

DOE Legacy Management Sites:

[LM SITES](#)

The U.S. Department of Energy (DOE) Office of Legacy Management (LM) currently manages radioactive and chemical waste, environmental contamination, and hazardous material at over 100 sites across the U.S. The LM manages sites with diverse regulatory drivers (statutes or programs that direct cleanup and management requirements at DOE sites) or as part of internal DOE or congressionally-recognized programs, such as but not limited to: Formerly Utilized Sites Remedial Action Program (FUSRAP), Uranium Mill Tailings Radiation Control Act (UMTRCA Title I, Title II), Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA), Resource Conservation and Recovery Act (RCRA), Decontamination and Decommissioning (D&D), Nuclear Waste Policy Act (NWPA). This site listing includes data exported from the DOE Office of LM's Geospatial Environmental Mapping System (GEMS). GEMS Data disclaimer: The DOE Office of LM makes no representation or warranty, expressed or implied, regarding the use, accuracy, availability, or completeness of the data presented herein.

Government Publication Date: Dec 1, 2022

Alternative Fueling Stations:

[ALT FUELS](#)

This list of alternative fueling stations is sourced from the Alternative Fuels Data Center (AFDC). The U.S. Department of Energy's Office of Energy Efficiency & Renewable Energy launched the AFDC in 1991 as a repository for alternative fuel vehicle performance data, which provides a wealth of information and data on alternative and renewable fuels, advanced vehicles, fuel-saving strategies, and emerging transportation technologies. The data includes Biodiesel (B20 and above), Compressed Natural Gas (CNG), Electric, Ethanol (E85), Hydrogen, Liquefied Natural Gas (LNG), Propane (LPG), and Renewable Diesel (R20 and above) fuel type locations.

Government Publication Date: Mar 23, 2023

Superfunds Consent Decrees:

[CONSENT DECREES](#)

This list of Superfund consent decrees is provided by the Department of Justice, Environment & Natural Resources Division (ENRD) through a Freedom of Information Act (FOIA) applicable file. This listing includes Consent Decrees for CERCLA or Superfund Sites filed and/or as proposed within the ENRD's Case Management System (CMS) since 2010. CMS may not reflect the latest developments in a case nor can the agency guarantee the accuracy of the data. ENRD Disclaimer: Congress excluded three discrete categories of law enforcement and national security records from the requirements of the FOIA; response is limited to those records that are subject to the requirements of the FOIA; however, this should not be taken as an indication that excluded records do, or do not, exist.

Government Publication Date: Apr 19, 2023

Air Facility System:

[AFS](#)

This EPA retired Air Facility System (AFS) dataset contains emissions, compliance, and enforcement data on stationary sources of air pollution. Regulated sources cover a wide spectrum; from large industrial facilities to relatively small operations such as dry cleaners. AFS does not contain data on facilities that are solely asbestos demolition and/or renovation contractors, or landfills. ECHO Clean Air Act data from AFS are frozen and reflect data as of October 17, 2014; the EPA retired this system for Clean Air Act stationary sources and transitioned to ICIS-Air.

Government Publication Date: Oct 17, 2014

Registered Pesticide Establishments:

SSTS

List of active EPA-registered foreign and domestic pesticide-producing and device-producing establishments based on data from the Section Seven Tracking System (SSTS). The Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) Section 7 requires that facilities producing pesticides, active ingredients, or devices be registered. The list of establishments is made available by the EPA.

Government Publication Date: Mar 30, 2022

Polychlorinated Biphenyl (PCB) Transformers:

PCBT

Locations of Transformers Containing Polychlorinated Biphenyls (PCBs) registered with the United States Environmental Protection Agency. PCB transformer owners must register their transformer(s) with EPA. Although not required, PCB transformer owners who have removed and properly disposed of a registered PCB transformer may notify EPA to have their PCB transformer de-registered. Data made available by EPA.

Government Publication Date: Oct 15, 2019

Polychlorinated Biphenyl (PCB) Notifiers:

PCB

Facilities included in the national list of facilities that have notified the United States Environmental Protection Agency (EPA) of Polychlorinated Biphenyl (PCB) activities. Any company or person storing, transporting or disposing of PCBs or conducting PCB research and development must notify the EPA and receive an identification number.

Government Publication Date: Nov 3, 2022

State

Permitted Air Dischargers:

AIR PERMITS

The Oregon Department of Environmental Quality Air Quality Division maintains this list of facilities with air discharge permits. Active and temporarily closed permits are included in this list.

Government Publication Date: May 9, 2023

Per- and Polyfluoroalkyl Substances (PFAS):

PFAS

A list of sites from the Environmental Cleanup Site Information Database (ECSI) where Per- and Polyfluoroalkyl substances (PFAS) containing materials may be of concern. This list is made available by the Oregon Department of Environmental Quality.

Government Publication Date: May 5, 2023

Historical Hazardous Materials Incident Reports:

HIST HAZMAT

Since January 1, 1985, the Oregon Office of State Fire Marshal (OSFM) has collected Hazardous Material Incident Reports from emergency responders. This list also includes Clandestine Drug Sites.

Government Publication Date: Dec 31, 2009

Spills Incidents Sites:

SPILLS

List of spills and/or releases reported to the Washington Department of Ecology (DEC).

Government Publication Date: Mar 20, 2023

Hazardous Materials Incident Reports:

HAZMAT

A list of Hazardous Material Incidents reported to the Oregon Office of State Fire Marshall (OSFM) from emergency responders. Covers the time period from 1986 through the current listed date.

Government Publication Date: Nov 1, 2022

Reported Spills to Water:

SPILLS WATER

A list of reported spills to water of one gallon or more made available by the Washington Department of Ecology.

Government Publication Date: Jan 6, 2023

Spills:

SPILLS

List of spills and/or releases reported to The Department of Environmental Quality's (DEQ) Emergency Response Program. The program is designed to carry out legislative direction to work with other agencies and industry to prevent and respond to spills of oil and hazardous materials.

Government Publication Date: Mar 30, 2023

Facility/Site Identification System:

ALL SITES

The Facility/Site Identification System made available by the Department of Ecology (DEC) provides a central repository of key information for each facility/site of interest to DEC. The DEC has defined a facility/site as an operation at a fixed location that is of interest to the agency because it has an active or potential impact upon the environment.

Government Publication Date: Mar 20, 2023

Dry Cleaning Facilities:

DRYCLEANERS

The Department of Environmental Quality tracks registered dry cleaner facilities.

Government Publication Date: Oct 11, 2022

Environmental Report Tracking System (ERTS):

ERTS

A list of incidents from the Environmental Report Tracking System (ERTS), used by various programs within the Washington Department of Ecology (DEC) to track incidents and activities. This list is made available by the Washington Department of Ecology (DEC).

Government Publication Date: Feb 17, 2023

Delisted Drycleaner Facilities:

DELISTED DRYCLEANERS

List of facilities which once appeared on - and have since been removed from - the list of registered dry cleaning facilities made available by the Oregon Department of Environmental Quality.

Government Publication Date: Oct 11, 2022

Independent Cleanup Reports:

ICR

List of facilities in remedial action reports received by the Washington Department of Ecology (DEC) from either the owner or operator of the site. These actions have been conducted without department oversight or approval and are not under an order or decree. Independent Cleanup is historical terminology for Voluntary Cleanup; this data is no longer updated, current records can be found in Voluntary Cleanup.

Government Publication Date: Nov 6, 2015

Registered Drycleaners List:

DRYCLEANERS

A listing of registered drycleaner facilities maintained by the Department of Ecology.

Government Publication Date: Feb 22, 2023

Tier 2 Report:

TIER 2

A list of Tier 2 facilities in Oregon made available via the Oregon Community Right to Know Hazardous Substance Manager (CHS) overseen by the Oregon State Police, Office of State Fire Marshal.

Government Publication Date: Mar 26, 2019

Delisted Drycleaners:

DELISTED DRYCLEANERS

Sites which once appeared on the list of registered drycleaner facilities made available by the Department of Ecology.

Government Publication Date: Feb 22, 2023

Uninhabitable Drug Lab Properties:

CDL

List of properties which have been declared by a law enforcement agency to be unfit for use due to meth lab and/or storage activities. The properties are considered uninhabitable until cleaned up by a state certified decontamination contractor and a certificate of fitness is issued by the Oregon Health Authority, Public Health Division. This list is made available by the Department of Consumer & Business Services.

Government Publication Date: Apr 14, 2023

Tier 2 Report:

TIER 2

List of facilities that report storage of hazardous chemicals or materials to the Department of Ecology's Hazardous Waste and Toxics Reduction Program under the Emergency Planning and Community Right to Know Act (EPCRA).

Government Publication Date: Oct 19, 2022

Clandestine Drug Lab Sites:

CDL

A list of Clandestine Drug Lab sites made available by the Washington Department of Health.

Government Publication Date: Apr 24, 2023

Clandestine Drug Lab Sites - Historical Listing:

HIST CDL

List of Clandestine Drug Lab sites reported to the Department of Health from local health departments. This list contains sites that are not in the current list.

Government Publication Date: until 2007

Air Permitted Facilities:

AIR PERMITS

This list of air emissions inventory is a point source summary of individual inventories from facilities with air operating permits. This list is maintained by the Washington Department of Ecology.

Government Publication Date: Jul 1, 2022

Underground Injection Control Wells:

UIC

The Water Quality Program of the Washington State Department of Ecology (DEC) maintains this water quality permit database that includes Underground Injection Control (UIC) wells. According to the DEC, UIC wells are manmade structures used to discharge fluids into the subsurface. Examples are drywells, infiltration trenches with perforated pipe, and any structure deeper than the widest surface dimension. The majority of UIC wells in Washington are used to manage storm water and sanitary waste, return water to the ground, and help clean up contaminated sites. The potential for groundwater contamination from injection wells depends upon well construction and location; quality of the fluids injected; and the geographic and hydrologic settings in which the injection occurs.

Government Publication Date: Oct 15, 2020

Tribal

No Tribal additional environmental record sources available for this State.

County

No County additional environmental databases were selected to be included in the search.

Definitions

Database Descriptions: This section provides a detailed explanation for each database including: source, information available, time coverage, and acronyms used. They are listed in alphabetic order.

Detail Report: This is the section of the report which provides the most detail for each individual record. Records are summarized by location, starting with the project property followed by records in closest proximity.

Distance: The distance value is the distance between plotted points, not necessarily the distance between the sites' boundaries. All values are an approximation.

Direction: The direction value is the compass direction of the site in respect to the project property and/or center point of the report.

Elevation: The elevation value is taken from the location at which the records for the site address have been plotted. All values are an approximation. Source: Google Elevation API.

Executive Summary: This portion of the report is divided into 3 sections:

'Report Summary'- Displays a chart indicating how many records fall on the project property and, within the report search radii.

'Site Report Summary'-Project Property'- This section lists all the records which fall on the project property. For more details, see the 'Detail Report' section.

'Site Report Summary-Surrounding Properties'- This section summarizes all records on adjacent properties, listing them in order of proximity from the project property. For more details, see the 'Detail Report' section.

Map Key: The map key number is assigned according to closest proximity from the project property. Map Key numbers always start at #1. The project property will always have a map key of '1' if records are available. If there is a number in brackets beside the main number, this will indicate the number of records on that specific property. If there is no number in brackets, there is only one record for that property.

The symbol and colour used indicates 'elevation': the red inverted triangle will dictate 'ERIS Sites with Lower Elevation', the yellow triangle will dictate 'ERIS Sites with Higher Elevation' and the orange square will dictate 'ERIS Sites with Same Elevation.'

Unplottables: These are records that could not be mapped due to various reasons, including limited geographic information. These records may or may not be in your study area, and are included as reference.

Appendix J Physical Settings, Water Wells, and Oil and Gas Reports

Property Information

Order Number:	23053101602p
Date Completed:	June 1, 2023
Project Number:	1/21-0295-02.002.SC003.5
Project Property:	Umatilla School District Athletic Fields and Natural Area Umatilla School District Athletic Fields and Natural Area Umatilla OR
Coordinates:	
Latitude:	45.91497941
Longitude:	-119.33609492
UTM Northing:	5087254.82556 Meters

Summary.....	29
Detail Report.....	31
Radon Information.....	86
Appendix.....	87
Liability Notice.....	89

The ERIS **Physical Setting Report - PSR** provides comprehensive information about the physical setting around a site and includes a complete overview of topography and surface topology, in addition to hydrologic, geologic and soil characteristics. The location and detailed attributes of oil and gas wells, water wells, public water systems and radon are also included for review.

The compilation of both physical characteristics of a site and additional attribute data is useful in assessing the impact of migration of contaminants and subsequent impact on soils and groundwater.

Disclaimer

This Report does not provide a full environmental evaluation for the site or adjacent properties. Please see the terms and disclaimer at the end of the Report for greater detail.

Geologic Information

Geologic Units

This maps shows geologic units in the area. Please refer to the report for detailed descriptions.

Geologic Information

The previous page shows USGS geology information. Detailed information about each unit is provided below.

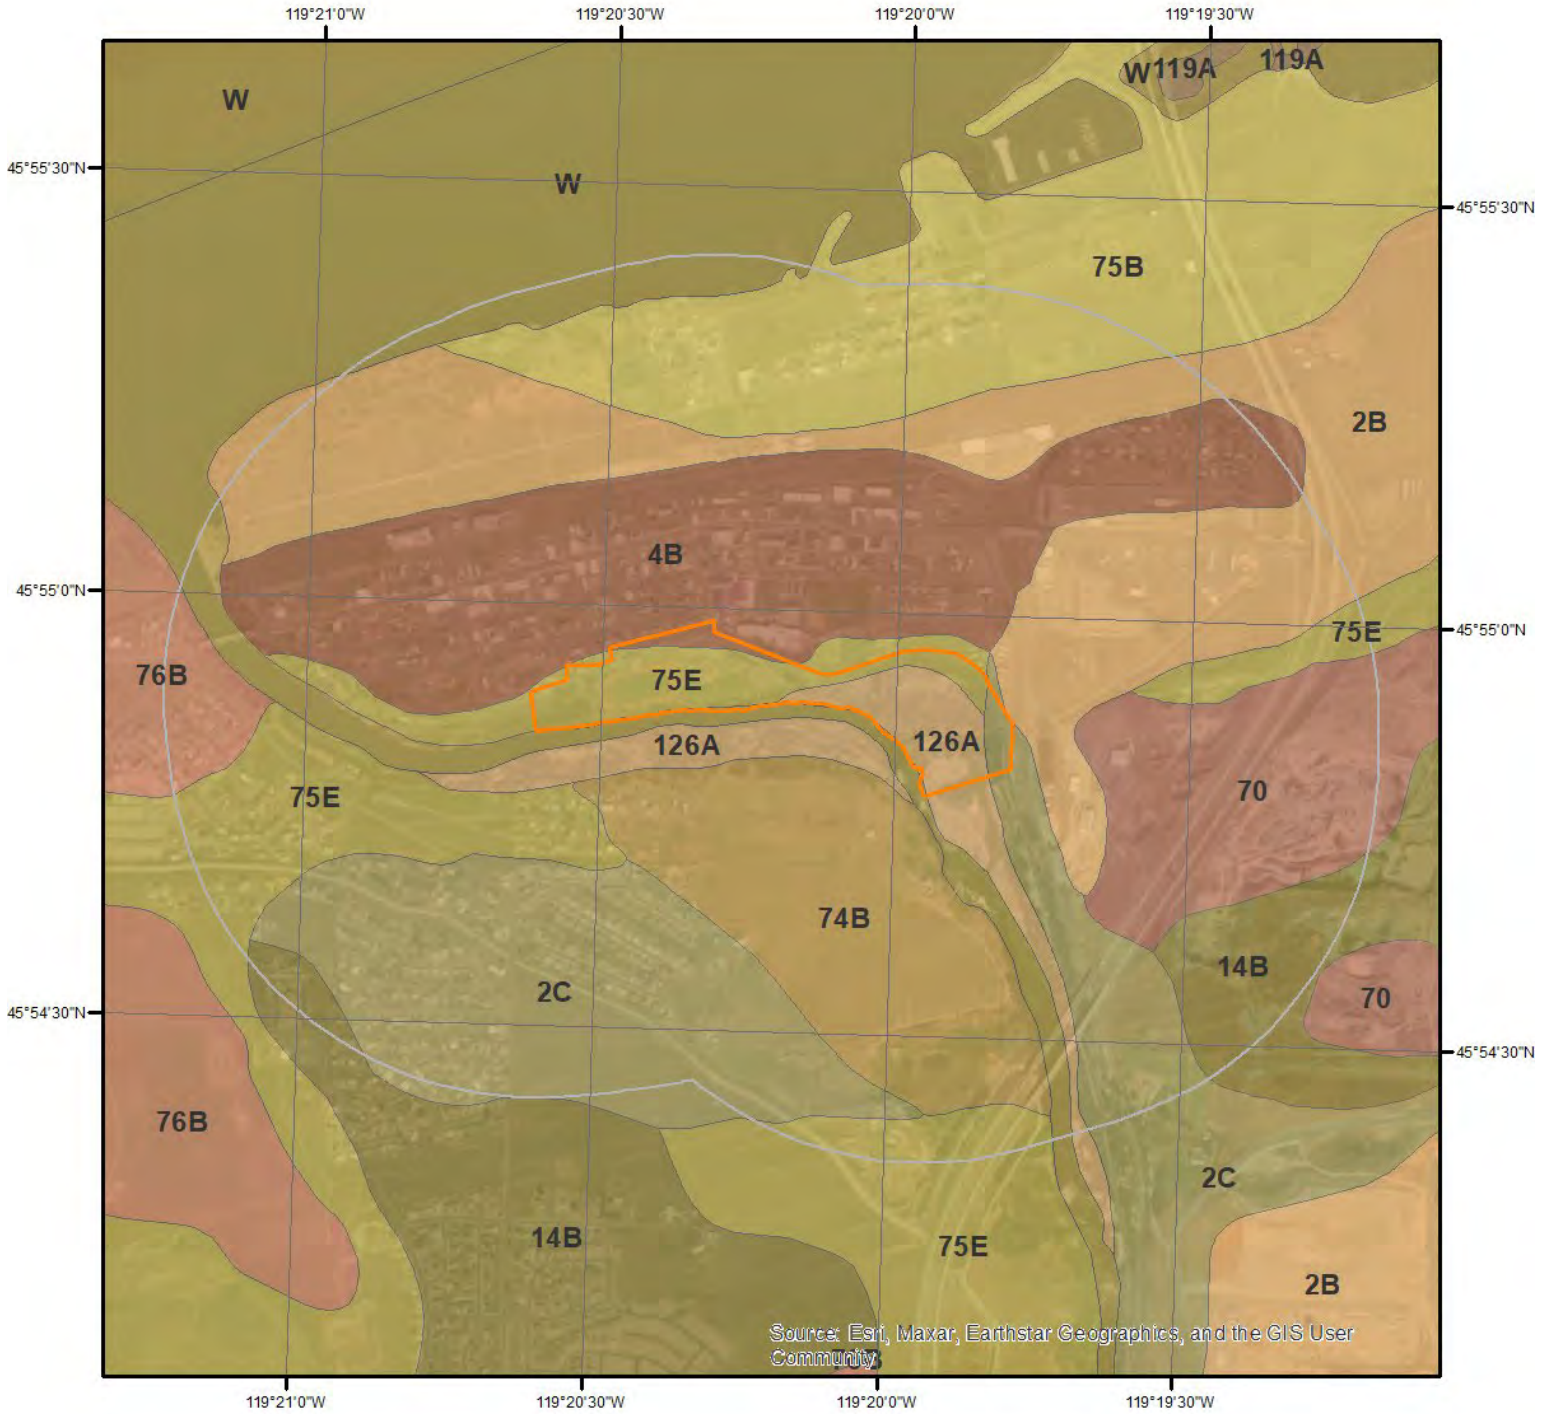

Geologic Unit OW

Unit Name:	Open Water
Unit Age:	Holocene
Primary Rock Type:	water
Secondary Rock Type:	
Unit Description:	water

Geologic Unit Qgs

Unit Name:	Glaciofluvial, lacustrine, and pediment sedimentary deposits (Holocene and Pleistocene)
Unit Age:	Pleistocene
Primary Rock Type:	silt
Secondary Rock Type:	sand
Unit Description:	Unconsolidated, poorly sorted silt, sand, and gravel. Includes lacustrine deposits west of Columbia River Gorge (Trimble, 1963). Mostly in northern Morrow and Umatilla Counties where unit represents deposits of swollen late Pleistocene Columbia River (Hogenson, 1964)

Soil Information

SSURGO Soils

This maps shows SSURGO soil units around the target property. Please refer to the report for detailed soil descriptions.

Soil Information

The previous page shows a soil map using SSURGO data from USDA Natural Resources Conservation Service. Detailed information about each unit is provided below.

Map Unit 126A (0.87%)

Map Unit Name:	Xerofluvents, 0 to 3 percent slopes
Bedrock Depth - Min:	null
Watertable Depth - Annual Min:	61cm
Drainage Class - Dominant:	Somewhat poorly drained
Hydrologic Group - Dominant:	C - Soils in this group have moderately high runoff potential when thoroughly wet. Water transmission through the soil is somewhat restricted.

Major components are printed below

Xerofluvents(80%)	
horizon H1(0cm to 8cm)	Cobbly loam
horizon H2(8cm to 18cm)	Very cobbly loam
horizon H3(18cm to 56cm)	Extremely gravelly sandy loam
horizon H4(56cm to 152cm)	Extremely gravelly sand

Component Description:

Minor map unit components are excluded from this report.

Map Unit: 126A - Xerofluvents, 0 to 3 percent slopes

Component: Xerofluvents (80%)

The Xerofluvents component makes up 80 percent of the map unit. Slopes are 0 to 3 percent. This component is on flood plains, valleys. The parent material consists of mixed alluvium. Depth to a root restrictive layer is greater than 60 inches. The natural drainage class is somewhat poorly drained. Water movement in the most restrictive layer is moderately high. Available water to a depth of 60 inches (or restricted depth) is low. Shrink-swell potential is low. This soil is frequently flooded. It is not ponded. A seasonal zone of water saturation is at 24 inches during January, February, March, April, May, June, July, August, September, October, November, December. Organic matter content in the surface horizon is about 2 percent. Nonirrigated land capability classification is 7w. This soil does not meet hydric criteria.

Component: Riverwash (1%)

Generated brief soil descriptions are created for major soil components. The Riverwash soil is a minor component.

Component: Fluvaquents (1%)

Generated brief soil descriptions are created for major soil components. The Fluvaquents soil is a minor component.

Map Unit 14B (7.12%)

Map Unit Name:	Burbank loamy fine sand, 0 to 5 percent slopes
Bedrock Depth - Min:	null
Watertable Depth - Annual Min:	null
Drainage Class - Dominant:	Excessively drained
Hydrologic Group - Dominant:	A - Soils in this group have low runoff potential when thoroughly wet. Water is transmitted freely through the soil.

Major components are printed below

Burbank(85%)	
horizon H1(0cm to 15cm)	Loamy fine sand
horizon H2(15cm to 64cm)	Loamy fine sand
horizon H3(64cm to 76cm)	Very gravelly loamy fine sand
horizon H4(76cm to 152cm)	Extremely gravelly sand

Component Description:

Soil Information

Minor map unit components are excluded from this report.

Map Unit: 14B - Burbank loamy fine sand, 0 to 5 percent slopes

Component: Burbank (85%)

The Burbank component makes up 85 percent of the map unit. Slopes are 0 to 5 percent. This component is on strath terraces, Columbia River valleys. The parent material consists of eolian sands over gravelly alluvium. Depth to a root restrictive layer is greater than 60 inches. The natural drainage class is excessively drained. Water movement in the most restrictive layer is high. Available water to a depth of 60 inches (or restricted depth) is low. Shrink-swell potential is low. This soil is not flooded. It is not ponded. There is no zone of water saturation within a depth of 72 inches. Organic matter content in the surface horizon is about 1 percent. This component is in the R007XY011OR Sands 8-10 Pz ecological site. Nonirrigated land capability classification is 7e. Irrigated land capability classification is 4e. This soil does not meet hydric criteria. The calcium carbonate equivalent within 40 inches, typically, does not exceed 8 percent.

Map Unit 2B (7.46%)

Map Unit Name:	Adkins fine sandy loam, gravelly substratum, 0 to 5 percent slopes
Bedrock Depth - Min:	null
Watertable Depth - Annual Min:	null
Drainage Class - Dominant:	Well drained
Hydrologic Group - Dominant:	B - Soils in this group have moderately low runoff potential when thoroughly wet. Water transmission through the soil is unimpeded.

Major components are printed below

Adkins(80%)	
horizon H1(0cm to 10cm)	Fine sandy loam
horizon H2(10cm to 114cm)	Fine sandy loam
horizon H3(114cm to 152cm)	Very gravelly fine sandy loam

Component Description:

Minor map unit components are excluded from this report.

Map Unit: 2B - Adkins fine sandy loam, gravelly substratum, 0 to 5 percent slopes

Component: Adkins (80%)

The Adkins, gravelly substratum component makes up 80 percent of the map unit. Slopes are 0 to 5 percent. This component is on strath terraces, Columbia River valleys. The parent material consists of eolian sands over gravelly alluvium. Depth to a root restrictive layer is greater than 60 inches. The natural drainage class is well drained. Water movement in the most restrictive layer is moderately high. Available water to a depth of 60 inches (or restricted depth) is moderate. Shrink-swell potential is low. This soil is not flooded. It is not ponded. There is no zone of water saturation within a depth of 72 inches. Organic matter content in the surface horizon is about 1 percent. This component is in the R007XY013OR Sandy Loam 8-10 Pz ecological site. Nonirrigated land capability classification is 4e. Irrigated land capability classification is 2e. This soil does not meet hydric criteria.

Map Unit 2C (5.06%)

Map Unit Name:	Adkins fine sandy loam, gravelly substratum, 5 to 25 percent slopes
Bedrock Depth - Min:	null
Watertable Depth - Annual Min:	null
Drainage Class - Dominant:	Well drained
Hydrologic Group - Dominant:	B - Soils in this group have moderately low runoff potential when thoroughly wet. Water transmission through the soil is unimpeded.

Major components are printed below

Adkins(80%)	
horizon H1(0cm to 10cm)	Fine sandy loam
horizon H2(10cm to 114cm)	Fine sandy loam
horizon H3(114cm to 152cm)	Very gravelly fine sandy loam

Soil Information

Component Description:

Minor map unit components are excluded from this report.

Map Unit: 2C - Adkins fine sandy loam, gravelly substratum, 5 to 25 percent slopes

Component: Adkins (80%)

The Adkins, gravelly substratum component makes up 80 percent of the map unit. Slopes are 5 to 25 percent. This component is on scarps on strath terraces, Columbia River valleys. The parent material consists of eolian sands over gravelly alluvium. Depth to a root restrictive layer is greater than 60 inches. The natural drainage class is well drained. Water movement in the most restrictive layer is moderately high. Available water to a depth of 60 inches (or restricted depth) is moderate. Shrink-swell potential is low. This soil is not flooded. It is not ponded. There is no zone of water saturation within a depth of 72 inches. Organic matter content in the surface horizon is about 1 percent. This component is in the R007XY013OR Sandy Loam 8-10 Pz ecological site. Nonirrigated land capability classification is 4e. Irrigated land capability classification is 4e. This soil does not meet hydric criteria.

Map Unit 4B (3.63%)

Map Unit Name:	Adkins-Urban land complex, 0 to 5 percent slopes
Bedrock Depth - Min:	null
Watertable Depth - Annual Min:	null
Drainage Class - Dominant:	Well drained
Hydrologic Group - Dominant:	B - Soils in this group have moderately low runoff potential when thoroughly wet. Water transmission through the soil is unimpeded.

Major components are printed below

Adkins(55%)	
horizon H1(0cm to 10cm)	Fine sandy loam
horizon H2(10cm to 89cm)	Fine sandy loam
horizon H3(89cm to 152cm)	Fine sandy loam

Component Description:

Minor map unit components are excluded from this report.

Map Unit: 4B - Adkins-Urban land complex, 0 to 5 percent slopes

Component: Adkins (55%)

The Adkins component makes up 55 percent of the map unit. Slopes are 0 to 5 percent. This component is on strath terraces, Columbia River valleys. The parent material consists of eolian sands. Depth to a root restrictive layer is greater than 60 inches. The natural drainage class is well drained. Water movement in the most restrictive layer is moderately high. Available water to a depth of 60 inches (or restricted depth) is high. Shrink-swell potential is low. This soil is not flooded. It is not ponded. There is no zone of water saturation within a depth of 72 inches. Organic matter content in the surface horizon is about 1 percent. This component is in the R007XY013OR Sandy Loam 8-10 Pz ecological site. Nonirrigated land capability classification is 4e. Irrigated land capability classification is 2e. This soil does not meet hydric criteria. The calcium carbonate equivalent within 40 inches, typically, does not exceed 28 percent.

Component: Urban land (25%)

Generated brief soil descriptions are created for major soil components. The Urban land is a miscellaneous area.

Component: Wanser (5%)

Generated brief soil descriptions are created for major soil components. The Wanser soil is a minor component.

Map Unit 70 (2.04%)

Map Unit Name:	Pits, gravel
----------------	--------------

No more attributes available for this map unit

Component Description:

Minor map unit components are excluded from this report.

Soil Information

Map Unit: 70 - Pits, gravel

Component: Pits (100%)

Generated brief soil descriptions are created for major soil components. The Pits is a miscellaneous area.

Map Unit 74B (1.96%)

Map Unit Name: Quincy fine sand, 0 to 5 percent slopes
Bedrock Depth - Min: null
Watertable Depth - Annual Min: null
Drainage Class - Dominant: Excessively drained
Hydrologic Group - Dominant: A - Soils in this group have low runoff potential when thoroughly wet. Water is transmitted freely through the soil.

Major components are printed below

Quincy(85%)

horizon H1(0cm to 10cm)	Fine sand
horizon H2(10cm to 152cm)	Fine sand

Component Description:

Minor map unit components are excluded from this report.

Map Unit: 74B - Quincy fine sand, 0 to 5 percent slopes

Component: Quincy (85%)

The Quincy component makes up 85 percent of the map unit. Slopes are 0 to 5 percent. This component is on strath terraces, Columbia River valleys. The parent material consists of eolian sands. Depth to a root restrictive layer is greater than 60 inches. The natural drainage class is excessively drained. Water movement in the most restrictive layer is high. Available water to a depth of 60 inches (or restricted depth) is moderate. Shrink-swell potential is low. This soil is not flooded. It is not ponded. There is no zone of water saturation within a depth of 72 inches. Organic matter content in the surface horizon is about 1 percent. This component is in the R007XY011OR Sands 8-10 Pz ecological site. Nonirrigated land capability classification is 7e. Irrigated land capability classification is 4e. This soil does not meet hydric criteria. The calcium carbonate equivalent within 40 inches, typically, does not exceed 2 percent. There are no saline horizons within 30 inches of the soil surface.

Component: Wanser (3%)

Generated brief soil descriptions are created for major soil components. The Wanser soil is a minor component.

Map Unit 75B (4.41%)

Map Unit Name: Quincy loamy fine sand, 0 to 5 percent slopes
Bedrock Depth - Min: null
Watertable Depth - Annual Min: null
Drainage Class - Dominant: Excessively drained
Hydrologic Group - Dominant: A - Soils in this group have low runoff potential when thoroughly wet. Water is transmitted freely through the soil.

Major components are printed below

Quincy(85%)

horizon H1(0cm to 10cm)	Loamy fine sand
horizon H2(10cm to 152cm)	Fine sand

Component Description:

Minor map unit components are excluded from this report.

Map Unit: 75B - Quincy loamy fine sand, 0 to 5 percent slopes

Component: Quincy (85%)

The Quincy component makes up 85 percent of the map unit. Slopes are 0 to 5 percent. This component is on strath terraces,

Soil Information

Columbia River valleys. The parent material consists of eolian sands. Depth to a root restrictive layer is greater than 60 inches. The natural drainage class is excessively drained. Water movement in the most restrictive layer is high. Available water to a depth of 60 inches (or restricted depth) is moderate. Shrink-swell potential is low. This soil is not flooded. It is not ponded. There is no zone of water saturation within a depth of 72 inches. Organic matter content in the surface horizon is about 1 percent. This component is in the R007XY012OR Sandy 8-10 Pz ecological site. Nonirrigated land capability classification is 7e. Irrigated land capability classification is 4e. This soil does not meet hydric criteria. The calcium carbonate equivalent within 40 inches, typically, does not exceed 2 percent. There are no saline horizons within 30 inches of the soil surface.

Component: Wanser (2%)

Generated brief soil descriptions are created for major soil components. The Wanser soil is a minor component.

Map Unit 75E (34.69%)

Map Unit Name: Quincy loamy fine sand, 5 to 25 percent slopes
Bedrock Depth - Min: null
Watertable Depth - Annual Min: null
Drainage Class - Dominant: Excessively drained
Hydrologic Group - Dominant: A - Soils in this group have low runoff potential when thoroughly wet. Water is transmitted freely through the soil.

Major components are printed below

Quincy(65%)
horizon H1(0cm to 10cm) Loamy fine sand
horizon H2(10cm to 152cm) Fine sand

Component Description:

Minor map unit components are excluded from this report.

Map Unit: 75E - Quincy loamy fine sand, 5 to 25 percent slopes

Component: Quincy (65%)

The Quincy component makes up 65 percent of the map unit. Slopes are 5 to 25 percent. This component is on strath terraces, Columbia River valleys. The parent material consists of eolian sands. Depth to a root restrictive layer is greater than 60 inches. The natural drainage class is excessively drained. Water movement in the most restrictive layer is high. Available water to a depth of 60 inches (or restricted depth) is moderate. Shrink-swell potential is low. This soil is not flooded. It is not ponded. There is no zone of water saturation within a depth of 72 inches. Organic matter content in the surface horizon is about 1 percent. This component is in the R007XY012OR Sandy 8-10 Pz ecological site. Nonirrigated land capability classification is 7e. Irrigated land capability classification is 6e. This soil does not meet hydric criteria. The calcium carbonate equivalent within 40 inches, typically, does not exceed 2 percent. There are no saline horizons within 30 inches of the soil surface.

Map Unit 76B (3.86%)

Map Unit Name: Quincy loamy fine sand, gravelly substratum, 0 to 5 percent slopes
Bedrock Depth - Min: null
Watertable Depth - Annual Min: null
Drainage Class - Dominant: Excessively drained
Hydrologic Group - Dominant: A - Soils in this group have low runoff potential when thoroughly wet. Water is transmitted freely through the soil.

Radon Information

This section lists any relevant radon information found for the target property.

Federal EPA Radon Zone for *UMATILLA* County: **2**

Zone 1: Counties with predicted average indoor radon screening levels greater than 4 pCi/L

Zone 2: Counties with predicted average indoor radon screening levels from 2 to 4 pCi/L

Zone 3: Counties with predicted average indoor radon screening levels less than 2 pCi/L

Federal Area Radon Information for *UMATILLA* County

No Measures/Homes:	40
Geometric Mean:	1.6
Arithmetic Mean:	2.6
Median:	1.7
Standard Deviation:	3
Maximum:	14
% >4 pCi/L:	20
% >20 pCi/L:	0
Notes on Data Table:	TABLE 1. Indoor radon data from the Oregon Radon Project conducted by the Oregon Division of Health. Data represent randomly-sampled 2-month Alpha-track detector measurements collected during 1988-1990.

Federal Sources

FEMA National Flood Hazard Layer

FEMA FLOOD

The National Flood Hazard Layer (NFHL) data incorporates Flood Insurance Rate Map (FIRM) databases published by the Federal Emergency Management Agency (FEMA), and any Letters Of Map Revision (LOMRs) that have been issued against those databases since their publication date. The FIRM Database is the digital, geospatial version of the flood hazard information shown on the published paper FIRMs. The FIRM Database depicts flood risk information and supporting data used to develop the risk data. The FIRM Database is derived from Flood Insurance Studies (FISs), previously published FIRMs, flood hazard analyses performed in support of the FISs and FIRMs, and new mapping data, where available.

Indoor Radon Data

INDOOR RADON

Indoor radon measurements tracked by the Environmental Protection Agency(EPA) and the State Residential Radon Survey.

Public Water Systems Violations and Enforcement Data

PWSV

List of drinking water violations and enforcement actions from the Safe Drinking Water Information System (SDWIS) made available by the Drinking Water Protection Division of the US EPA's Office of Groundwater and Drinking Water. Enforcement sensitive actions are not included in the data released by the EPA. Address information provided in SWDIS may correspond either with the physical location of the water system, or with a contact address.

Radon Zone Level

RADON ZONE

Areas showing the level of Radon Zones (level 1, 2 or 3) by county. This data is maintained by the Environmental Protection Agency (EPA).

Safe Drinking Water Information System (SDWIS)

SDWIS

The Safe Drinking Water Information System (SDWIS) contains information about public water systems as reported to US Environmental Protection Agency (EPA) by the states. Addresses may correspond with the location of the water system, or with a contact address.

Soil Survey Geographic database

SSURGO

The Soil Survey Geographic database (SSURGO) contains information about soil as collected by the National Cooperative Soil Survey at the Natural Resources Conservation Service (NRCS). Soil maps outline areas called map units. The map units are linked to soil properties in a database. Each map unit may contain one to three major components and some minor components.

USGS Current Topo

US TOPO

US Topo topographic maps are produced by the National Geospatial Program of the U.S. Geological Survey (USGS). The project was launched in late 2009, and the term "US Topo" refers specifically to quadrangle topographic maps published in 2009 and later.

USGS Geology

US GEOLOGY

Seamless maps depicting geological information provided by the United States Geological Survey (USGS).

USGS National Water Information System

FED USGS

The U.S. Geological Survey (USGS)'s National Water Information System (NWIS) is the nation's principal repository of water resources data. This database includes comprehensive information of well-construction details, time-series data for gage height, streamflow, groundwater level, and precipitation and water use data.

Wells from NWIS

FED USGS

The U.S. Geological Survey's National Water Information System (NWIS) is the nation's principal repository of water resources data. The NWIS includes comprehensive information of well-construction details, time-series data for gage height, streamflow, groundwater level, and precipitation and water use data. This NWIW dataset contains select Site Types from the overall NWIS Sites data, limited to the following Group Site Types only: Groundwater Group Site Types: Well, Collector or Ranney type well, Hyporheic-zone well, Interconnected Wells, Multiple wells; Spring Group Site Type: Spring; and Other Group Site Types: Aggregate groundwater use, Cistern.

Appendix

State Sources

Oil and Gas Wells

OGW

Oil and Gas Well Data collected by State of Oregon Department of Geology and Mineral Industries.

Public Water Systems

PWS

Public Water Systems data provided by the Oregon Drinking Water Services (DWS), Oregon Health Authority via the Drinking Water Data Online database. Addresses may correspond with the location of the water system, or with a contact address.

Well Log Report

WATER WELLS

The Water Resources Department maintains a Well Log report that tracks the construction of water wells in the state of Oregon. Public Land Survey System (PLSS) locations provided by the source are subject to accuracy limitations inherent to the PLSS system.

Liability Notice

Reliance on information in Report: The Physical Setting Report (PSR) DOES NOT replace a full Phase I Environmental Site Assessment but is solely intended to be used as a review of environmental databases and physical characteristics for the site or adjacent properties.

License for use of information in Report: No page of this report can be used without this cover page, this notice and the project property identifier. The information in Report(s) may not be modified or re-sold.

Your Liability for misuse: Using this Service and/or its reports in a manner contrary to this Notice or your agreement will be in breach of copyright and contract and ERIS may obtain damages for such mis-use, including damages caused to third parties, and gives ERIS the right to terminate your account, rescind your license to any previous reports and to bar you from future use of the Service.

No warranty of Accuracy or Liability for ERIS: The information contained in this report has been produced by ERIS Information Inc. ("ERIS") using various sources of information, including information provided by Federal and State government departments. The report applies only to the address and up to the date specified on the cover of this report, and any alterations or deviation from this description will require a new report. This report and the data contained herein does not purport to be and does not constitute a guarantee of the accuracy of the information contained herein and does not constitute a legal opinion nor medical advice. Although ERIS has endeavored to present you with information that is accurate, ERIS Information Inc. disclaims, any and all liability for any errors, omissions, or inaccuracies in such information and data, whether attributable to inadvertence, negligence or otherwise, and for any consequences arising therefrom. Liability on the part of ERIS is limited to the monetary value paid for this report.

Trademark and Copyright: You may not use the ERIS trademarks or attribute any work to ERIS other than as outlined above. This Service and Report(s) are protected by copyright owned by ERIS Information Inc. Copyright in data used in the Service or Report(s) (the "Data") is owned by ERIS or its licensors. The Service, Report(s) and Data may not be copied or reproduced in whole or in any substantial part without prior written consent of ERIS.

Appendix K User Questionnaire

Attachment B
Phase I ESA Report User Information

To: Pinyon Environmental, Inc.
From: Robin Norris
Of: USACE - Portland District Real Estate Office
Phone: 503-808-4669
Email: robin.c.norris@usace.army.mil
Site Address: 1400 7th Street, Umatilla, OR 97882
Date: February 23, 2023

The person who will use, or rely on, the Phase I must provide the information outlined below. Please fill out this form to the best of your ability. For any questions where the answer is “yes,” please provide additional information in the column to the right or on a separate sheet. Without the answers to these questions, Pinyon’s Phase I report will have to note that the Phase I report is incomplete, and your Landowner Liability Protections could be at risk. If you have any questions, please contact Pinyon for assistance.

User Question	User Provided Answer and Additional Information
What is the purpose of the Phase I ESA? Is it for a loan?	USACE renewal of lease with Umatilla School District.
What is the planned use (commercial, residential, industrial, or other) of the Site?	Other
Did a search of recorded land title records identify any environmental liens filed or recorded against the Site under federal, tribal, state, or local law?	NA - federally owned property.
Did a search of recorded land title records identify any activity use limitations (AULs), such as engineering controls, land use restrictions, or institutional controls the Site under federal, tribal, state, or local law? If so, please describe.	NA - federally owned property.
Do you have any specialized knowledge or experience related to the Site or nearby properties? If so, please describe.	None other than file records for the site.

Attachment B
Phase I ESA Report User Information (Continued)

User Question	User Provided Answer and Additional Information
Does the purchase price for this property reasonably reflect the fair market value of the Site? Note that this question does not require an appraisal of the property, but is based on the experience of the user.	NA, Federal Government already owns the property
If you answered "no" to the above question, have you considered whether the lower purchase price is because contamination is known or believed to be present at the Site?	NA
Do you know the past uses of the Site? If so, please describe.	Based on previous Preliminary Assessment Screening (PAS), the land was used for open space and cattle grazing.
Do you know of specific chemicals that are present or once were present at the Site? If so, please describe.	No
Do you know of spills or other chemical releases that have taken place at the Site? If so, please describe.	No
Do you know of any environmental cleanups that have taken place at the Site? If so, please describe.	No
Based on your knowledge and experience related to the Site, are there any obvious indicators that point to the presence or likely presence of releases at the Site?	No

Appendix L Glossary of Terms

AAI	All Appropriate Inquiry
ACBM	Asbestos Containing Building Material. Any surfacing, thermal systems insulation or miscellaneous material found in or on interior structural members that contains more than one percent asbestos.
ACM	Asbestos Containing Material
ACGIH	American Conference of Governmental Industrial Hygienists
AHERA	Asbestos Hazard Emergency Response Act
AP	Advanced Purchase – Full acquisition of a parcel prior to issuance of the Record of Decision
ASHARA	Asbestos School Hazard Abatement Re-Authorization Act
AST	Above-ground Storage Tank
AUL	Activity and Use Limitation
BFPP	Bona Fide Prospective Purchaser
bgs	below ground surface
BTEX	Benzene, Toluene, Ethylbenzene, and Total Xylenes
CAA	Clean Air Act
CDOT	Colorado Department of Transportation
CDPHE	Colorado Department of Public Health and Environment
CERCLA	Comprehensive Environmental Response, Compensation and Liability Act; commonly referred to as Superfund.
CERCLIS	Comprehensive Environmental Response, Compensation and Liability Information System
CESQG	Conditionally Exempt Small Quantity Generator
CORRACTS	RCRA Corrective Action Site
COT	Chain of Title
CREC	Controlled Recognized Environmental Condition
CWA	Clean Water Act
EC	Engineering Control

Phase I Environmental Site Assessment

Umatilla School District Athletic Fields and Natural Area
I Street
Umatilla, Oregon

EPA	Environmental Protection Agency
EPCRA	Emergency Planning and Community Right-to-Know Act
ERNS	Emergency Response Notification System
ESA	Environmental Site Assessment
FEMA	Federal Emergency Management Agency
FIFRA	Federal Insecticide, Fungicide and Rodenticide Act
Hazardous Materials	Hazardous material means any substance, waste, or material determined by any state, federal or local governmental authority to be capable of posing a risk of injury to health, safety and property, including, but not limited to, all substances, wastes and materials designated, defined or listed as hazardous, extremely hazardous or toxic pursuant to the Clean Water Act, 33 USC Sec. 1251, et seq.; Resource Conservation and Recovery Act, 42 USC Sec. 6901 et. seq.; the Comprehensive Environmental Response, Compensation and Liability Act of 1980, as amended by the Superfund Amendments and Reauthorization Act of 1986, 42 USC Sec. 9601, et. seq.; the United States Department of Transportation Hazardous Material Table, 49 CFR Part 172; regulations of the Environmental Protection Agency, 40 CFR Part 302; or such substances, materials and wastes that are or become regulated under any applicable local, state or federal law, and including any asbestos, petroleum and any petroleum fractions, urea formaldehyde foam insulation, chlorofluorocarbons (CFCs), or polychlorinated biphenyls (PCBs).
Hazardous Substance	Defined by CERCLA. Includes substances designated for special consideration under the CAA, the CWA, or the TSCA, and any hazardous wastes defined under RCRA. EPA can designate additional substances as hazardous if they present substantial danger to health and the environment.
Hazardous Waste	Waste defined in RCRA, which, due to its quantity, concentration, or physical, chemical or infectious characteristics, may present a hazard to human health or the environment.
HREC	Historical Recognized Environmental Condition
LBP	Lead-Based Paint
LLP	Landowner Liability Protections
LQG	Large Quantity Generator. Refers to a generator who generates more than 1,000 kilograms of hazardous waste in a calendar month.
LUST	Leaking Underground Storage Tank
mg/Kg	milligram per kilogram

Phase I Environmental Site Assessment

Umatilla School District Athletic Fields and Natural Area
 I Street
 Umatilla, Oregon

mg/L	milligram per liter
msl	mean sea level
NAD	No Action Determination
NESHAP	National Emission Standard for Hazardous Air Pollutants
NFA	No Further Action
NFRAP	No Further Remedial Action Planned
NIOSH	National Institute for Occupational Safety and Health
NPDES	National Pollutant Discharge Elimination System
NPL	National Priority List (Superfund sites)
NVLAP	National Voluntary Laboratory Accreditation Program
OPS	Oil and Public Safety, Colorado Department of Labor and Employment
OTHERHW	Listed RCRA Facilities but do not fit into category of CORRACTS, TSDs, or Generators; includes Transporters, Non-Notifiers, former Generators, and others.
OSHA	Occupational Safety and Health Administration
OU	Operable Unit
PA/SI	Preliminary Assessment/Site Investigation (CERCLA study)
PCB	Polychlorinated biphenyl
pCi/L	Picocurie per liter
PE	Permanent Easement
PEL	Permissible Exposure Limit
PLM	Polarized Light Microscopy, a method of analyzing bulk samples for asbestos.
ppb	Parts-per-billion
ppm	Parts-per-million
RBSL	Risk-Based Screening Level
RECs	Recognized Environmental Conditions
RCRA	Resource Conservation and Recovery Act
RCRA-Viol	RCRA facilities with a reported violation

Phase I Environmental Site Assessment

Umatilla School District Athletic Fields and Natural Area
I Street
Umatilla, Oregon

RCRIS	Resource Conservation and Recovery Information System
RCRIS- TSDC	RCRA TSD facilities subject to corrective action
RFA	RCRA Facility Assessment (RCRA study).
RFI	RCRA Facility Investigation (RCRA study).
RI/FS	Remedial Investigation/Feasibility Study (CERCLA study).
ROD	Record of Decision
ROW	Right-of-Way
RW	Right-of-Way – Full or partial acquisition, typically purchased after the Record of Decision
SCL	State CERCLIS Equivalent Site
SCR	Site Characterization Report
SDWA	Safe Drinking Water Act
SEMS	Superfund Enterprise Management System – replaces CERCLIS Database
SEMSARCH	Superfund Enterprise Management System Archive – replaces CERCLIS NFRAP database
SPILLS	State spills list and federal ERNS list.
SPL	State NPL Equivalent Site
SQG	Small Quantity Generator. Refers to a generator who generates between 100 and 1,000 kilograms of hazardous waste in a calendar month.
SWLF	Solid Waste Landfill
TE	Temporary Easement
TPH	Total Petroleum Hydrocarbons
TRIS	Toxic Release Inventory System
TLV	Threshold Limit Value
TSCA	Toxic Substance Control Act
TSD	Treatment, Storage or Disposal (refers to RCRA facilities).
µg/Kg	microgram per kilogram
µg/L	microgram per liter

PROFESSIONAL EXPERIENCE

Mr. Partington has 18 years of environmental consulting experience and is Pinyon's Project Delivery Principal. At Pinyon he has managed over 200 projects, with over 600 individual tasks, for a variety of public and private sector clients. Mr. Partington has led multi-disciplinary teams through the planning, implementation, and completion of the tasks required to ensure that clients' projects meet regulatory requirements, project goals, budgets, and schedules. Mr. Partington, in close cooperation with Pinyon President Lauren Evans, has a key role in verifying document quality control (QC).

Mr. Partington has worked as project manager and field operations manager on a variety of projects requiring due diligence evaluations, hazardous materials assessments, environmental constraints analysis, and remediation. He has managed projects regulated under Colorado's Underground Storage Tank (UST) regulations, the Resource Conservation and Recovery Act (RCRA), Colorado's Solid Waste and Hazardous Waste Regulations, and under the Colorado Voluntary Cleanup and Recovery Act. He has also completed Brownfields Assessments in accordance with US (Environmental Protection Agency) EPA requirements. Sample property types have included historical landfills, Superfund sites, dry cleaners, gas stations, mine sites, and junk yards.

PROJECT EXPERIENCE

Emergency Flood Repairs, Boulder County, Colorado. Emergency Flood Repairs, Boulder County, Colorado. Mr. Partington is currently leading the environmental documentation, NEPA processes, and permitting effort for over two dozen transportation infrastructure projects in response to the Colorado flooding that took place in September 2013. As a part of this effort, he is working directly with jurisdictional agencies, Federal Emergency Management Agency (FEMA), Federal Highway Administration (FHWA), and CDOT, to scope and complete recovery and repair projects. Pinyon is currently a subconsultant to several major engineering design firms, and also holds an on-call contract with Boulder County Transportation completing these evaluations. The services provided include NEPA evaluations as well as threatened and endangered species, waters of the US, including wetlands, Senate Bill 40, Section 4(f), hazardous materials, and cultural resource surveys. Projects are located in Jefferson, Denver, Boulder, Larimer, Gilpin, and Weld Counties.

US 34 Beautification Project, Lyons, Colorado. The Town of Lyons, in coordination with CDOT, was studying options to enhance US 34 in Lyons, Colorado. NEPA required a Categorical Exclusion (CatEx). Mr. Partington led the environmental task on this project and was responsible for coordination with the Town of Lyons and CDOT Region 4. Based on early consultation with CDOT Region 4, key environmental resources that were cleared for the

Categorical Exclusion included biological resources (including threatened and endangered species), Wetlands and Waters of the US, hazardous materials and historic resources. A historic district within the project area, consisting of Sandstone buildings is listed on the National Register of Historic Places (NRHP). Additionally, several other individual properties are listed on or determined officially eligible for the NRHP. As a result, Mr. Partington worked closely with Pinyon's historian and CDOT to develop an approach for completing all tasks associated with Section 106 of the National Historic Preservation Act (NHPA).

US 36 Managed Lane/BRT Design/Build Project, Phase 1 and 2 Denver to Boulder, Colorado. As the Environmental Compliance Manager during the design phase, Pinyon was responsible for documenting design changes as part of an interdisciplinary team, confirming that the design matches permitted areas (e.g. Section 404 permit), coordinating permits/approvals and for regulatory and jurisdictional coordination. Pinyon developed the project Environmental Compliance Work Plan, Materials Management Plan, Noxious Weed Management Plans, and FACWet forms for all impacted wetlands along the corridor. Mr. Partington oversaw the biological resource planning during the preconstruction phase of this project. Pinyon mapped Senate Bill 40 trees and shrubs, wrote the Senate Bill 40 Formal reports and coordinated mitigation measures. During the construction phase, Pinyon was responsible for documenting that construction activities meet the mitigation, contractual, and permit commitments.

I-70 Twin Tunnels Reconstruction, CDOT Region 4, Clear Creek County, Colorado. Mr. Partington was Pinyon's project lead for CDOT's Twin Tunnels project, which expanded the eastbound bore near Idaho Springs, an additional lane for capacity, and a new bridge. Mr. Partington's responsibility was for hazardous materials, which was a challenging resource due to a legacy of hardrock and placer mining that had occurred in the vicinity for over 100 years. To evaluate these conditions, numerous soil and groundwater samples were collected, a Phase I ESA was completed, and Mr. Partington prepared the associated EA technical sections and mitigation. For mitigation, a Materials Management Plan was developed in cooperation with CDOT, EPA, and Colorado Department of Public Health and Environment (CDPHE). This project was given FHWA's 2013 Environmental Excellence Award for Environmental Streamlining.

Daniel Jennings Geologist

PROFESSIONAL EXPERIENCE

Mr. Jennings has four years of experience as a geologist in environmental consulting and due diligence. Mr. Jennings is experienced in aquifer and contaminant plume characterization, groundwater resource analyses, Phase I Environmental Site Assessments (ESAs), as well as the collection, interpretation, and management of a variety of hydrogeological data. Mr. Jennings has worked with a diverse clientele, from the private sector to state and federal agencies, across the United States.

AREAS OF EXPERTISE

- Aquifer Characterization
- Data Management
- Due Diligence
- Groundwater Sampling
- Phase I ESAs
- Phase II ESAs
- Plume Characterization
- Soil Sampling

Intro – Hydrogeology

Mr. Jennings has four years of experience working in complex fractured bedrock hydrogeology. Mr. Jennings was formerly a part of a field services team that utilized methods such as borehole geophysical logging, packer testing, and aquifer testing, to evaluate aquifer characteristics. Data collected during these evaluations were interpreted for academic, water supply, and remedial uses. Mr. Jennings has worked with data from initial site characterizations to decades-long monitoring and remediation efforts.

YEARS EXPERIENCE

RELEVANT EXPERIENCE

Due Diligence

Mr. Jennings has over two years of experience working in due diligence on sites in Colorado, Nevada, North Dakota, and Pennsylvania. These projects primarily consist of conducting Phase I and Phase II ESAs in accordance with ASTM standards.

Sciences: Geology, West
Chester University of
Pennsylvania, 2017

Aquifer and Plume Characterization

Mr. Jennings has four years of experience providing services to determine aquifer characteristics. These services include borehole geophysical logging, packer tests, aquifer pumping tests, slug tests, and long-term groundwater monitoring. Mr. Jennings was responsible for the collection, interpretation, and management of this data, as well as preparing reports with conclusions for client use.

Groundwater Sampling

Mr. Jennings has four years of experience with groundwater sampling using a variety of methods. These methods include 3" Grundfos SQE series pumps, 2" Grundfos Redi-Flo II series pumps, peristaltic pumps, bladder pumps, and bailers. Mr. Jennings has experience sampling for common contaminants, including volatile organic compounds (VOCs), arsenic, metals, and hydrocarbons, as well as emerging contaminants of concern, including per- and polyfluoroalkyl substances (PFAS) and 1-4 Dioxane.

PROJECT EXPERIENCE

Limited Phase II ESA | Confidential Client | Dickinson, North Dakota.

The Site was leased by the client and was previously operated as an oilfield storage and transfer facility for oil-based mud and brine. The client intended to

exit the lease agreement and performed the ESA to evaluate potential impacts from Site operations. Pinyon sampled soil from 14 soil borings and found two locations to be impacted. Mr. Jennings oversaw and sampled an additional 16 soil borings to delineate the impacted area for future remediation. This project is ongoing.

Test Trench Investigation | Confidential Client | Aurora, Colorado. The test trench investigation was performed in conjunction with a Phase I ESA being conducted on the property. During the Phase I research, it was discovered that a creek had formerly flowed through the property before being re-channeled along the property boundary. The historical use of these former channels as landfills prompted further investigation into the fill material of this former channel. Mr. Jennings oversaw the excavation of four test trenches and collected representative soil samples. Mr. Jennings also observed the debris used as fill material for signs of asbestos containing materials.

Limited Soil Sampling | City and County of Denver | Denver, Colorado. The City and County of Denver is constructing sidewalks to meet their plan set forth in Vision Zero, eliminating traffic-related deaths and serious injuries by 2030. Mr. Jennings collected samples using a hand auger in the proposed sidewalk areas in order to characterize project soils.

Phase I ESAs for Housing Industry

Mr. Jennings has worked on Phase I ESAs for properties being developed into housing in the Denver area. Examples include:

- Dove Valley | Confidential Client | Englewood, Colorado
- Gateway East Residential | Gateway East LLC | Denver, Colorado
- Syracuse Way | Confidential Client | Denver, Colorado

Phase I ESAs for Federal Agencies

Mr. Jennings has worked on two Phase I ESAs for properties under consideration for conservation easement acquisitions by the Bureau of Land Management. Examples include:

- Dangberg Home Ranch | BLM | Minden, Nevada
- Van Sickle Station Ranch | BLM | Minden, Nevada

Phase I ESAs for State and Local Agencies

Mr. Jennings worked on Phase I ESAs for state and local agencies acquiring properties or easements. Examples include:

- Central-70 | Project Colorado Department of Transportation | Denver, Colorado
- Recycled Asphalt Processing Property | Jefferson County Road and Bridge | Morrison, Colorado
