# Horizon Montessori III

Computers On Wheels Rationale

At our school the COW will be used to:

- incorporate multi-media into lessons and student projects
- demonstrate concepts
- present student work digitally
- provide immediate access to unlimited information
- expand exponentially the amount of information students are exposed to and internalize

Mobile computing devices have become essential to daily life — at work, at home and increasingly, at school. Students are using them to access information, interact with others and produce dynamic content — such as podcasts, reports and videos — inside and outside of the classroom. Students are genuinely more engaged in the lessons and thus more apt to stay on task and gain a greater depth of knowledge.
