## Preface

This report updates population and housing trends within Oak Park Elementary School District 97 and assesses the implications of these trends for future enrollments at the individual schools and the District as a whole. As before, the objective of the current report is fourfold. First, I shall discuss residential development patterns and demographic dynamics underlying historical enrollment changes in the District. Next, I shall assess annual enrollment changes in District 97 schools since 2002–03 and analyze student migration/transfer patterns and other sources of these enrollment changes. I shall then discuss potential new housing development, housing turnover (including teardowns) and other factors impacting family in-migration that will shape future enrollments in the District and the individual schools. Finally, I shall project enrollment, by grade and by year, for each of the eight elementary schools through school year 2023–24, and for Brooks and Julian Middle Schools and the District as a whole through school year 2028–29.

All enrollment projections will be in the form of three separate series based on different assumptions about future fertility rates, new housing development, housing turnover and family migration to District 97 and the elementary school attendance areas. These three series will provide forecasts by grade and by year of (A) the minimum number of students that may be

anticipated, (B) the most likely number of students to be expected, and (C) the maximum number of students that can possibly be foreseen.

In conducting the analysis that follows, I benefited from data provided by administrators of District 97. I would like especially to acknowledge Paul Starck-King, Assistant Superintendent of Finance and Operations/CSBO, who guided assembly of much of the information upon which this study is based. For his fine assistance and that of others who contributed to this study, I am most appreciative.

## **Overview of Oak Park Elementary School District 97**

Oak Park Public School District 97 is a kindergarten through eighth grade public school system, serving the residential community of Oak Park. Covering an area of about 4.7 square miles, the District is located ten miles west of downtown Chicago. According to the 2018–19 Fall Housing Report, 6,074 students were enrolled in ten schools on September 30, 2018. Students in kindergarten through grade five attend one of eight neighborhood schools—Beye, Hatch, Holmes, Irving, Lincoln, Longfellow, Mann, or Whittier—determined by geographical boundaries as shown in Figure 1. Students in grades six, seven and eight attend either Brooks or Julian middle schools, again, depending on their residential location. In addition to the eight elementary schools and two middle schools, the District has two other facilities: the administrative center at 260 Madison, and a shop and maintenance facility at the corner of Madison and Scoville.

District 97 schools reflect the rich demographic diversity of the Oak Park community, with more than twenty-five countries and languages represented by its students. Among the main racial/ethnic groups represented, Non-Hispanic Whites make up approximately 54 percent of the student body; African-Americans, 17 percent; Hispanics, 13 percent; Asians, 4 percent; and two or more races 12 percent. Of the District's nearly 530 F.T.E. teachers, 23 percent are

minority. Over four-fifths of the District's teachers hold a master's degree or higher, with District 97 student performance measures regularly exceeding state and national goals and standards.

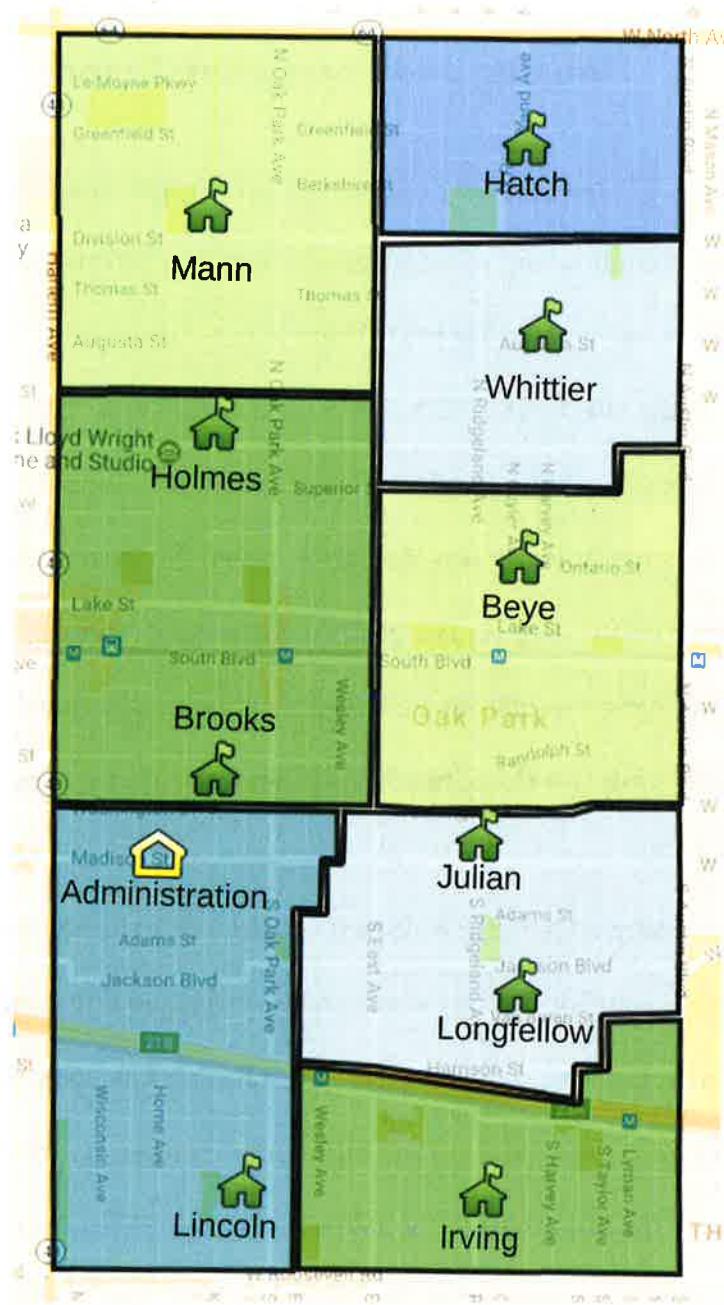

Figure 1. District 97 Boundaries

## Housing and Population Trends

Oak Park is a residentially mature suburb. Approximately 70 percent of the village's current housing was constructed prior to 1950 with the vast majority of that in 1939 or earlier (see Table 1). There was a considerable number of new houses built in the late 1940s, 1950s, 1960s, and early 1970s. This construction attracted a wave of younger families with school age children to Oak Park. Turnover of existing housing was also brisk, given the location, quality, and affordable price of housing. As late as 1970, the median value of owner occupied housing in Oak Park was just \$26,200, a value which more than quintupled during the following two decades and continued to rapidly appreciate through 2007 (see Table 2).

New housing construction slowed considerably during the 1970s as residential build-out (saturation) was being approached with some teardown and replacement housing occurring. Fertility rates and average family sizes were also declining from their 1950 to 1960 highs, and community maturation/aging commenced. By the latter half of the 1970s and early 1980s rapidly rising mortgage interest rates (exceeding 15 percent in 1981) and the national and regional economic slowdown further reduced in-migration of families with preschool and school age children. With the economy rebounding and mortgage interest rates significantly dropping in the mid-1980s, housing turnover to

younger families with preschool and elementary school age children picked up. While saturation slowed new housing construction thereafter, relatively low mortgage interest rates facilitated continued housing turnover to younger households with children.

Over the past twenty years, housing turnover remained fairly robust, though there were dips during the 2000–2002 and 2008–2012 recession periods. In the most recent years, Oak Park added two high-rise luxury apartment rental buildings to the downtown. Such buildings generate relatively small numbers of school-age children, however.

Table 3 illustrates how changes over the decades in fertility rates, average family sizes, Oak Park's housing dynamics, and family migration patterns affected its preschool and school age populations. Preschool (under age 5) residents, which peaked in 1960 at 4,788, declined to 4,072 in 1970 and down to just 3,410 in 1980 before rebounding to 3,880 in 1990. With an expected time lag, the elementary school age population (age 5–9) followed the preschool pattern, climbing to 4,806 in 1970, then dropping to 3,328 in 1980 before growing slightly to 3,424 in 1990. Again, following but temporally lagging behind changes in the age 5–9 populations, the aged 10–14 population of Oak Park increased to 5,381 in 1970 and dropped for the following two decades to 3,244 in 1990. The age 5–9 population has edged up slightly since 1990 from 3,424 that year to 3,563 in 2010 and stabilized through 2017. Those age 10–14 increased modestly in number to

3,564 in 2000 before slipping back slightly in 2010 and rising again to an estimated 3,912 in 2017. Oak Park's preschool-age residents (under age 5) dropped after 1990 reflecting, in part, smaller family sizes. Yet, in-migration of families with elementary school age children and middle school age children for the most part kept their numbers up through 2017.

## **Enrollment Trends and Student Migration**

Enrollment trends in Oak Park Elementary Schools mirrored housing and demographic dynamics in the District. Total district enrollment, which rapidly climbed in the 1950s and 1960s, leveled off in the early 1970s at approximately 6,300 students (see Table 4). From school year 1974–75 to school year 1984–85, the number of students attending District 97's declined from 6,340 to 4,547. Total enrollment moved up modestly to 4,647 in 1986–87 and slipped back to 4,556 in 1987–88. Total enrollment then climbed annually, reaching 5,359 students in school year 1996–97. Six years of enrollment declines then occurred with total District 97 again bottoming out at 4,923 students in school year 2002–03. Since then, total enrollment generally increased reaching 6,123 students in the fall of 2017 before modestly slipping back to 6,074 this past fall (2018).

### **Determinants of Enrollment Change**

School districts are open demographic systems whose growth, stability, or decline are affected by four basic factors. The first is the difference between the size of the kindergarten class that enters each September and the size of the previous June's graduating eighth grade class. The second is the net migration/transfer of school age children in the District as they progress through the grades

over the years. The third and fourth are the annual changes in special education and pre-kindergarten class sizes, respectively.

Tables 4, 5, and 6 show how total enrollment change in District 97 since the 1971–72 school year may be decomposed into its component parts. Table 4 provides the grade-by-grade and year-by-year enrollment for the District between 1971–72 and 2018–19. Table 5 decomposes the annual total enrollment changes into the four component parts until fall 2002 and three components afterwards (entering K versus exiting 8, net student migration/transfer, and change in pre-K) since K–8 special education students were reported in the grades in the Fall Housing enrollment reports beginning in school year 2002–03.

Thus, between September 2017 (school year 2017–18) and September 2018 (school year 2018–19), total District enrollment declined by 49 students (6,123 to 6,074). The 694 eighth graders who graduated in June 2018 (see Table 4) were replaced the following September (2018) by 661 kindergarten students, for a net class size difference of –33. In addition, 14 more students migrated into the District or transferred to Oak Park public schools from private or parochial schools than migrated out of the District or transferred to private or parochial schools between September 2017 and September 2018. During this same period pre-K declined by 30 students. The three components (–33, +14, –30) sum precisely to the overall 49-student decline in the District between September 2017 and September 2018.

Note that every year for the past twelve years, District 97 experienced positive net student in-migration and transfer. The large positive net student migration/transfer between September 2001 and September 2002 may partially be an artifact of mainstreaming special education students in September 2002 into their respective age-cohort grades.

Table 6 describes how these net student migration/transfer figures are computed from the enrollment data. The bottom left cell of "34" means that as the kindergarten class of September 2017 progressed to the first grade in September 2018, it gained 34 students. See Table 4 where kindergarten enrollment in school year 2017–18 was 629 and first grade enrollment this past fall (school year 2017–18) was 663 students. Conversely, as the third grade class of September 2017 progressed to the fourth grade in September 2018, it declined by 14 students. Summing across the bottom row of Table 6, one obtains 14, which is the net student migration/transfer gain between September 2017 and September 2018 shown in Table 5.

## **Enrollment Changes in the Individual Schools**

Recent enrollment changes in District 97 have been differentially distributed among its public schools. Tables 7 through 36 provide the annual enrollment for the past seventeen years for each school based on Fall Housing Report data and decomposes annual enrollment changes during this period into their component parts. Appendix A provides enrollment histories, by year and by grade, for each school back to school year 1971–72, absent missing enrollment data for school years 1997–98 to 2001–02. Annual Fall Housing report data were used for the individual schools beginning with school year 2002–03.

After climbing from 359 students in 2002–03 to 430 students in 2011–12, Beye declined to 367 students this year. Table 8 shows that declines at Beye have been largely a result of smaller entering kindergarten classes replacing larger progressing fifth grade classes. Hatch, on the other hand, expanded from 224 students in 2004–05 to 379 students this year. Its growth resulted mostly from relatively larger entering kindergarten classes compared to progressing fifth grade classes (see Table 11). Holmes rose from 401 students in 2004–05 to 593 students in 2016–17 before dropping back to 571 this year. This school's growth was driven primarily by strong student migration/transfers, except between fall 2013 and fall 2014 when migration/transfer was slightly negative and this past year more so (−16) contributing to its modest decline (see Tables 14). Irving

followed a somewhat similar path, expanding from 341 students in 2005–06 to 505 in 2013–14 before declining modestly over the past five years. Recent declines resulted mainly from smaller kindergarten classes replacing relatively larger progressing fifth grade classes. Lincoln irregularly grew from 516 students in 2003–04 to 687 students in 2017–18 and stabilized this year. Generally positive net student migration/transfer has been complemented in most years after 2008 by increases in kindergarten class sizes. Longfellow, likewise, had fairly steady growth from 425 students in 2003–04 to 740 in 2016–17, with strong positive student in-migration. Its modest decline to 703 students this year resulted from relatively smaller entering kindergarten classes the past two years compared with graduating eighth grade classes and drops in Pre-K. Student migration/transfer has been consistently positive since 2010. Mann has been roughly stable for the past fourteen years (see Table 25). Whittier (Table 28) has also been roughly stable over the past seventeen years.

Brooks Middle School grew from 782 students in 2005–06 to 989 students in 2016–17 after which enrollment declined to 906 students this year (Table 31). Decomposition of the sources of Brooks' annual enrollment changes since September 2001 is presented in Table 32. Observe that its declines since fall 2016 have been a result of smaller entering sixth grade classes versus graduating eighth grade classes and not negative net student migration/transfer.

Enrollment at Julian (Table 34), which stood at 824 in 2006–07, rose to 1,043 students in 2018–19. Decomposition of the annual sources of change show that the annual enrollment gains at Julian since fall 2010 have been primarily a result of larger entering sixth grade classes compared with graduating eighth grade classes (see Table 35).

## The Enrollment Future of District 97

The critical question now becomes, what exactly will happen to enrollment in District 97 over the next ten years? Which grade levels will it impact most? Which schools will be most affected? My analysis of annual registered births data for Oak Park residents, upward trends in kindergarten enrollments, large number of Oak Park resident over age 65, housing turnover, and student migration/transfer patterns lead me to forecast a nearly 400-student increase for District enrollment as a whole over the next eight years (after which it should stabilize) with most of the increase in the next five years accounted for by Beye, Holmes, Irving, and Longfellow Elementary Schools and Brooks Middle School. Before presenting and elaborating upon these trends, let me describe the factors underlying the projections.

Table 37 provides information on births to residents of Oak Park from 1980 to 2016. In a general (but quite inexact) sense, kindergarten enrollment lags annual community births by approximately five years. Though some annual fluctuations exist, there has been a distinct downward trend in registered births to residents of Oak Park since 2000. Yet, given the growing number of residents over age 65 in Oak Park (see Table 3), housing turnover from empty-nesters to younger families should keep total kindergarten enrollment near last year's number (661) with net student migration to District 97 on the positive side. Thus,

despite very limited new housing construction potential in the District, modest overall population growth should occur over the coming decades.

This prognostication is corroborated by population forecasts provided by the former Northeastern Illinois Planning Commission (now known as the Chicago Metropolitan Agency for Planning, or CMAP) for Oak Park. The latest CMAP forecasts presented in Table 38 indicate that between 2010 and 2040 Oak Park's population is anticipated to grow by 4,997. The main factor depressing total District enrollment in the future, then, will be lower births to residents in recent years and main positive factor, turnover of "empty nest" households to those with children. Housing sales (turnover) in Oak Park appear to be picking up since the 2008–2012 recession with sales prices edging up as well. The annual median home sales price along with annual median monthly number of sales between 2000 and 2018 are presented in Figure 2.

Another factor potentially impacting enrollment is the racial/ethnic compositions of the District's residents and those in particular attendance areas. Appendix B presents the annual racial/ethnic mix of total District 97 students and for the individual schools between 2000 and 2018. These data indicate that Oak Park has stabilized in this demographic factor in recent years.

In projecting enrollment for District 97, two sets of interrelated factors play central causal roles. The first is future fertility rates and resulting family sizes. Any changes in fertility rates during the next five years will not affect

enrollment projections because children who will be reaching kindergarten during the next five years are already born. Fertility rate changes during the next five years could affect elementary school enrollments, beginning with school year 2023–24. However, recent demographic surveys of middle-income young adults (including minorities) do not lead one to expect significant changes in their fertility rates during the next five years. For this reason, all projections will assume that fertility rates remain near existing levels through 2023.

The second, and most critical factor for future enrollment in the schools is net student in-migration resulting from new housing development in the District and turnover of existing housing units. There are some large multi-family buildings permitted, under construction, or near completion in the downtown areas, such as the Albion at 1000 Lake Street and Lincoln Properties at 1133 South Boulevard, that should yield a relatively small number of students to Holmes Elementary School and Brooks Middle School. A detailed analysis of student yield from the Albion, a 265-unit luxury rental apartment complex, forecasted a total of nine elementary and middle school age residents beginning in 2019. This is only one student per grade (K–8) for the District as a whole.

The bottom line is, though, since District 97 is basically build-out, future new housing development will likely have quite small impacts. Future student migration patterns will vary substantially, however, predicated on the degree of housing turnover (including teardowns), driven by economic conditions and

mortgage interest rates. For this reason three sets of enrollment projections will be provided for the District as a whole and for Brooks and Julian Middle Schools through 2028–29. Individual elementary schools will be projected through 2023–24. These projections will be presented in the form of separate series based on the following assumptions:

- Series A* Enrollment projection assuming future fertility rates remain constant (through 2023) and that housing turnover and resulting in-migration of families with preschool age and school age children *are less than anticipated* through 2028–29;
- Series B* Enrollment projection assuming future fertility rates remain constant (through 2023) and that housing turnover and resulting in-migration of families with preschool age and school age children *occur as anticipated* through 2028–29;
- Series C* Enrollment projection assuming future fertility rates remain constant (through 2023) and that housing turnover and resulting in-migration of families with preschool age and school age children *are greater than anticipated* through 2028–29.

The basic methodology used to make the three series of enrollment projections is a modified cohort survival procedure. Average cohort progression factors were computed for each grade transition for the past four years based on each school's migration/transfer figures shown previously. These average progression factors were adjusted for outliers in any given year and then applied to compute baseline enrollment projections (via conventional cohort survival techniques) for the school and the District. The sizes of future entering kindergarten classes were estimated using trends in birth registration data and

recent kindergarten enrollments, student migration patterns, and anticipated housing turnover during the coming decade.

The next step was to adjust projected enrollment each year in grades 1 through 8 for possible alterations in housing turnover. To obtain the Series B enrollment projections, it was assumed that future trends in housing turnover (including teardowns) would mirror the average of the last four years. Series A projections were made using similar methods but with student in-migration (resulting from lesser housing turnover) deflated by approximately 15 percent. Series C assumes a 15 percent increase in the amount of future in-migration of families with preschool and school age children to housing units in the District.

In projecting entering sixth grade students, Hatch, Holmes, Lincoln, and Whittier were assumed to be Brooks Middle School feeders, while Beye, Irving, Longfellow, and Mann were assumed to feed Julian Middle School. The fifth grade to sixth grade progressions to the middle schools also consider transfers from private and parochial schools as well as student in-migration from out of the district.

## **Enrollment Projections**

Tables 39 through 68 provide the grade by grade and year by year projections through school year 2023–24 for each of the eight elementary schools and through 2028–29 for the two middle schools under the Series A, Series B, and Series C assumptions. Because the precise annual projected number for every school by grade may be observed in their respective tables, I will comment only on projected total enrollment trends at each school, focusing on Series B, which I believe is the most likely.

It should be noted that these projections include estimates of pre-K enrollment which have been both bouncing annually and moving among schools. Caution must be taken with the grand totals where pre-K grade figures are included which required adjudication, averaging, and some basic professional judgment. Readers may wish to focus on the K–5 totals for the individual elementary schools rather than the grand totals recognizing that pre-K students may be administratively reallocated among elementary schools in the future.

If housing turnover and family in-migration occur as anticipated in each elementary school attendance area, the Series B projections show that all elementary schools will grow over the next five years. With pre-K estimates for selected schools recently housing them included, Beye will increase from 367 to

396 students between 2018–19 and 2023–24. During the same period, Hatch will grow from 379 to 390; Holmes, from 571 to 592; Irving, from 482 to 520; Lincoln, from 685 to 691; Longfellow, from 703 to 745; Mann, from 490 to 509; and Whittier, from 448 to 455.

Under the most likely Series B assumptions, enrollment at Brooks Middle School will rise from 906 this year to 1,045 in 2023–24. Afterwards, its enrollment will stabilize near that number through 2028–29.

Julian Middle School will drop modestly over the next three years from 1,043 this year to 964 in 2021–22. Julian's enrollment will then climb to 1,046 students in 2024–25 and level off near that number through 2028–29.

Along with pre-K students being shifted among elementary schools, a caveat should be noted regarding enrollment projections for the individual elementary schools. A number of District 97 elementary schools had highly fluctuating kindergarten enrollments during the past four years. This makes accurate estimates of their future kindergarten counts very difficult. I was, therefore, required to use professional judgment in making these estimates which included some smoothing of kindergarten enrollments in future years at these schools.

Let me also comment on enrollment projections beyond school year 2023–24. At the middle school level, projections for the next five years can be made with more confidence than for the five years following 2023–24, since most

students who will enter the middle schools through 2023–24 are already enrolled in the elementary feeder schools. Afterwards, we are projecting many students yet to even register in District 97 elementary schools. For the individual elementary schools, projections after 2023–24 are quite risky since, in addition to their bouncing pre-K and kindergarten enrollments in recent years, they would include students yet to be conceived. It is for this reason that I projected individual elementary schools only to 2023–24. Projections thereafter are provided, however, for the aggregate elementary school enrollment in District 97 to 2028–29, based on assumptions noted, since this is somewhat less risky than projecting individual elementary schools beyond 2023–24.

Tables 69, 70, and 71 present, respectively, the Series A, Series B, and Series C projections, by year and by grade, for the District as a whole through school year 2028–29. These aggregate projections were made based on district-wide data and analysis, independent of the individual school enrollment projections. You will see, though, that for Series B, the sum of the individual school projections comes quite close to the independently project District 97 Series B total amounts. Series A District totals will be higher than the sum of individual school Series A projections since it is unlikely that all schools will simultaneously follow the low Series. The converse holds for the District-wide Series C projections, which will be lower than the sum of the individual schools Series C projections.

Should housing turnover and student in-migration be less than anticipated (Series A), Table 69 reveals that total District enrollment will decline slightly from 6,074 this year to 6,021 in 2021–22 and then stabilize near that number. The main reasons projected enrollments under Series A decline so little is the recent years growth in kindergarten enrollments and the larger number of Oak Park residents over the age 65 whose homes will likely turn over in the coming decade. A solid portion of these empty-nest housing transitions should be to families with preschool and school-age children, even if overall housing turnover is less than anticipated.

Should overall housing turnover and resulting student in-migration occur as I anticipate, the Series B projections presented in Table 70 show that total District enrollment will rise to 6,473 students in 2028–29. As noted previously, most of this growth will occur during the next eight years. To repeat, it is my professional judgment that Series B is the most likely set of projections for the District as well as for the individual schools.

If the future housing development, housing turnover, and student in-migration exceed current expectations, Series C projections presented in Table 71 show total District enrollment climbing to 6,954 in 2028–29. My judgment is that this upper limit enrollment parameter for District 97 is unlikely to be reached, even with greater than anticipated housing turnover to families with preschool and school-age children.

## **Concluding Remarks**

As stated in my prior report, no demographer has a crystal ball. In this report, I have assembled the best information presently available and applied professional techniques and judgment to project enrollments for District 97 schools. Given fluctuating pre-K and kindergarten enrollments in the District's individual elementary schools, these projections should be monitored and updated regularly (at least every two to three years) to ensure that policy decisions are based on the latest and most reliable figures. At this time, it is my hope that the projections and other demographic information contained in this report will be helpful to the District 97 Board of Education, administrators, teachers, and concerned citizens as plans are made for future space and staff needs in District 97 schools.
