To: Corrina Guardipee-Hall; carlenea@bps.k12.mt.us Cc: Timothy Peterson

Corrina, Carlene,

Trail's End will is currently stockpiling enough 1-1/2" road base that we can purchase from them down the road as needed. The more urgent aggregate material we will need, and they don't/won't have, is the Type B graded that goes into the asphalt paving mix. The quantity required for the access road and lots would be approximately \$151,200 based on the attached load quote.

Please review and let me know if you need further information.

Thanks, Mike

Tim, see attached quote. We'd be looking at about 84 loads with the pup trailer, or \$151,200.

Thanks,

Matt

2,000 figures an in-place quantity of finished asphalt.

Thanks,

Matt

Is this 2,000 CY figured on in place quantity or you've figured you need 2,000 CY loose in a stockpile?

Grant – sorry, we had a change of plans. Mike indicated that you may already be crushing enough of the 1-1/2” minus gravel base.

We will need an estimate to furnish the Type B asphalt aggregate per MPWSS 02510. We're looking for a price for 2,000 yards, again to be stockpiled onsite for future use. Is this something you can do?

Thanks,

That's correct. The school district was hoping to have a proposal today, to present to the school board next week, if possible.

Grant,

Thanks, much appreciated. Can you provide a price proposal to furnish 5,000 cubic yards of the 1-1/2" minus gravel to the school district while Schellinger's crushing operation is in the area? The material would be stockpiled on site for use at a later date.

Matt,

Please see the attached budget pricing, actual quote will be provided upon request. Assuming we can place the existing gravel section on schedule 1 onsite and replacing with only 9" thickness of new base gravel.

Thanks,

Grant Roberts

Grant,

Attached are the site plan and quantity estimate for the access roads for the new food service warehouse at Browning High School. Can you plug some preliminary costs into the spreadsheet for the school district's budgeting? Feel free to give me a call if the exhibit or spreadsheet don't make sense to you.

We broke out the total 1-1/2" minus gravel base quantity required per each phase, totaling approximately 5,000 yards of material.

Thanks,

MATT HAMMERSTEIN
