#### SCOPE OF SERVICES

#### **Project Oversight and Air Monitoring**

The purpose of project management is to oversee asbestos abatement activities. Contractor's project management and air sampling services will generally consist of maintaining communication with Oak Park Elementary District 97 and the contractor(s), assessing abatement progress, monitoring abatement work to help maintain conformance with technical project specifications, and federal and state regulations as well as the project schedule, and performing asbestos air monitoring. These project activities are discussed below in greater detail.

- 1. Contractor will visually inspect the work areas for compliance with the technical specifications and applicable regulations. Contractor will review the abatement contractor's submittals.
- 2. During actual removal, abatement activity will be monitored by collecting air samples inside and outside the work areas. These air samples will be collected according to the Environmental Protection Agency (EPA) guidelines and the Occupational Safety & Health Administration (OSHA) Standard. Personal exposure monitoring samples will not be collected for the abatement contractor's work force.
- 3. Contractor will provide full-time, on-site monitoring. Contractor will inspect the work areas and abatement procedures daily for conformance with the technical project specifications as well as state and federal regulations. The containments will be visually inspected as well as engineering control methods including negative pressure ventilation systems, decontamination, and respiratory protection. Contractor will also conduct regular visual inspections of the Abatement Contractor's work methods including amended water application, containment cleanliness, bag-out, and final cleaning. Contractor will record field activities and observations including air sampling locations.
- 4. Contractor will conduct a final visual inspection of the work areas to determine if visible debris and asbestos-containing material have been sufficiently removed or repaired. Final clearance samples will be collected when Contractor determines that no visible debris remains. The final visual inspection will include a visual assessment for mold and moisture.
- 5. Contractor will collect final clearance samples to determine the airborne concentration of residual fibers upon completion of the asbestos abatement project.
- 6. Contractor will analyze all daily air samples by Phase Contrast Microscopy (PCM), using the National Institute for Occupational Safety and Health (NIOSH) Method 7400 counting rules.
- 7. Contractor will prepare a final abatement summary report. The report will include preabatement air sampling results, daily air sampling results, final clearance air sampling results, a description of abatement activity, and the contractor's submittals. The final

written report will be provided within 30 days after completion of final abatement activity and receipt of all waste manifests.
