Subject: **Efficacy of Vape Detectors**

MISD Board of Trustees: September 16, 2025

Agenda Item – 8D

Background Information

Student use of nicotine and THC vapes has increased in recent years as student vaping incidents are on the rise. Despite education efforts and more severe consequences, many students continue to vape in unsupervised spaces on campus, specifically in restrooms. Vape detectors offer schools another effective tool to address this problem. The presentation will show the effectiveness of vape detectors installed at the three secondary campuses.

Fiscal implications

None

Administration Recommendation

Continue utilizing vape detectors as a deterrent to vaping on campus.
