CYBER SECURITY

 Cyber security refers to all aspects of protecting an organization and its employees & assets against cyber-attacks

WHAT ARE CYBER ATTACKS?

- MALWARE Malicious software that gains access, changes, or destroys sensitive information on your systems
- RANSOMWARE: Extortion for money (systems and/or data held up from being able to be used)
- **DENIAL-OF SERVICE ATTACKS (DoS):** *interruption of normal* business processes by attacking the network to slow/stop network
- **PHISHING**: Techniques to entice a victim to share sensitive information or to download a malicious file with a virus

HOW ARE WE PROTECTING AGAINST CYBER ATTACKS CURRENTLY?

- Firewall
- Antivirus software
- Content and web filtering system
- Email Filtering and Phishing training

PLANNED UPGRADES – SUMMER '24

New: EDR & MDR application & services (\$117,000)

- Endpoint (device/hardware) Detection & Response
 (enhanced anti-virus that provides metrics & isolates suspect devices before issues arise) SentinelOne
- Managed (network) Detection & Response
 (monitoring software of our network with notification and action to stop
 potential threats with a live security team on call 24/7/365) Arctic Wolf

^{*} Future insurability ramifications if we don't implement

ANY QUESTIONS?
