Re: Proposed Resolution on Long Range Facilities Plan Debt

I have reviewed the proposed resolution on Long Range Facilities Plan ("LRFP") Debt, and I wanted to share my thoughts with you.

This resolution advocates for the refunding of all existing LRFP bond issues to achieve savings on future debt payments, and to shift debt payments for all refunded bonds to the Debt Service levy. Achieving cost savings through a bond refunding is a goal I agree with, and one I have pursued in my past experience as a school business official. Further, ISD 709 has recent experience of approving refundings, one each in 2015 and 2016, which generated net cost savings of \$8,669,502. As a result of these two refundings, property tax levies paid by Duluth taxpayers will be reduced in an amount equal to this savings amount.

Full consideration of the proposed resolution should include recognition of the legal and contractual constraints associated with a plan to refund all existing LRFP bond issues, with all future debt payments shifted to the Debt Service levy, and, secondly, an assessment of the potential savings that such a refunding would generate.

Legal/Contractual Limitations

The plan to refund all LRFP bond issues, and shift future debt payments to the Debt Service levy is subject to a number of legal, and contractual restrictions which limit our authority to do such a refunding, make it more expensive, or restrict our authority to shift debt payments to the Debt Service levy. Included among, but not limited to, those restrictions are the following:

- Minnesota statutory restrictions
 - Requirement that an advance refunding must achieve at least 3% net present value savings;

- Requirement that three of our Certificates of Participation bond series be paid out of General Fund revenues
 - These restrictions may, or may not be, subject to change by the Minnesota legislature with assistance from local legislators
- Federal law/subsidy
 - After a municipal bond issue has been refunded once, any subsequent refunding of that bond issue loses its tax exemption under federal law, which would result in higher interest rates on the taxable bond issue (two of our existing bond issues are refundings)
 - One of our bond issues qualifies for a federal tax subsidy, which reduces our debt payment costs. This federal reimbursement which will total \$6,400,000 from now to the retirement of these bonds in 2028 would be lost if these bonds were refunded
 - Securing changes in federal law to address our circumstances is unlikely
- Contractual limitations
 - Bond holders who have purchased our bonds have contractual rights, including the right to hold the bond, and receive agreed upon interest payments, at least until the specified "call date" when the bond may be redeemed
 - The call dates for existing LRFP debt issues ranges from as early as February 2019 to February 2027
 - Bond interest payments due prior to the call date are not subject to change, even if an advance refunding was completed
 - There is no means to alter the contractual rights that bond holders have with respect to the call date on bonds that they own

Debt Costs for a Full Refunding

Before seeking legislative action to remove any legal obstacles to the plan to refund all LRFP bond issues, it is important that we understand what cost savings potential such a plan promises. I requested that Steve Pumper from PMA Financial prepare an analysis of debt payments for a 20-year refunding bond issue.

For the purposes of this analysis, I asked Mr. Pumper to assume that there was no Minnesota statutory restriction requiring that an advance refunding generate at least 3% net present value savings, to assume that all bonds could be refunded immediately and are not subject to call dates, and to not take into account that refundings of our existing refunding bond issues would lose their tax-exempt status under federal tax law. These are simplifying, though not realistic assumptions which allow for a simpler analysis of a proposed refunding. These assumptions
