

## Teacher Report

The month of January has gone well for our students. We have been working hard on our core subjects. Our first and second grade students are really growing as readers, and they are becoming more confident with their addition and subtraction facts in math. The 3rd grade students are wrapping up reading *The Secret Garden*, which they have been really enjoying.

We were able to complete

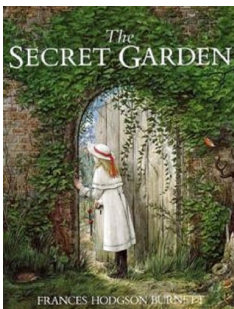

our winter MAP testing, which showed that our students are growing, or in some cases just growing more comfortable taking that kind of assessment.

In art Mrs. Trischman has had the students practice different techniques and create some really amazing watercolor paintings. The students have also been really enjoying their dance/movement class with Michaela; and when the weather permits we get outside and do learn what we can from

the forest and the intertidal zone around the point.

We are looking forward to integrating some cursive writing practice into our daily journal writing. As well as picking out a new novel to study after wrapping up *The Secret Garden*.

charge of

has recently come back to our attention that a battery and inverter system would also be a beneficial upgrade for the school. With a

battery the school could keep a fridge/freezer plugged in for a longer period of time and

keeping the generator going. It

have better food security. The battery could also be connected to the Starlink so that it is on and heating when the snow is falling. The internet has been spotty, but there are plans to work on solutions in the near future.
