April 7, 2016

Dear Valued Members of our Community,

In August 2015, the Minnehaha PTA created a plan to update the community playground located at the Minnehaha Elementary School. The plan includes removing outdated equipment that does not meet the Americans with Disabilities Act (ADA) requirements and could pose a safety hazard to our children. The plan also includes updating the rubber chip surface because it is not inclusive for all children, updating equipment, and providing a green space. The object of the plan is to create a safe and exciting play space for children, as well as to make the playground more accessible to all children regardless of their needs and abilities.

The Minnehaha playground is located in Two Harbors along Eighth Street between Fourth and Fifth Avenues. Not only is the playground the sole source of outdoor play for Minnehaha students, but it also serves community members year round.

During the planning process, the committee identified the first priority for the playground project would be to remove all structures that do not meet ADA requirements. This equipment is unsafe for children to play on. The next priority, that is crucial to the success of our students, is to make the playground accessible for our special needs children. The current rubber chip surfacing makes it difficult for children using wheelchairs, walkers, or crutches to access the play areas. We would solve this problem by installing a pour and play surface material. This material would allow for an even surface that all children would be able to navigate to access their peers and playground equipment.

The new playground plan is designed for children 3 to 12 years old. It is intended to provide a great variety of creative play opportunities that will intrigue all children while helping to develop both physical and social skills.

The playground's projected install date is July 2016. We are using a volunteer based install as a way to cut back costs. The volunteer install involves community members assembling and installing the entire playground.

We are collecting items for our Spring Carnival to be used in raffle baskets and at our silent auction. Our Spring Carnival will be held on Saturday, April 23<sup>rd</sup> from 4:00-7:00.

Any donations, large or small, would be greatly appreciated and will show that the community supports the new playground project. Thank you for your consideration. If you have any questions, please contact Jenny Falk at (218) 391-6286 or <a href="mailto:jfalk@isd381.k12.mn.us">jfalk@isd381.k12.mn.us</a>. Donations can be mailed to:

Minnehaha PTA Playground Project 421 7<sup>th</sup> Street Two Harbors, MN 55616

Healthy people, a clean environment and a thriving economy

# Moratorium on Use of Recycled Waste Tires in Playgrounds & Athletic Fields (SF 3108, HF 3496)

Healthy Legacy supports a policy to prevent potential adverse health effects to children and athletes from exposure to shredded waste tire mulch in playgrounds and athletic fields.

SF 3108 / HF 3496 will:

- Establish a moratorium on the use of public funds for new playgrounds and athletic fields using shredded tire mulch or crumb rubber infill until July 2019.
- Requires the Minnesota Department of Health to review and evaluate a report to be issued by the California Office of Environmental Health Hazard Assessment<sup>1</sup> and report back to the Minnesota legislature on potential health risks to children and athletes of continued use of waste tires for playgrounds and athletic fields.
- Require signage to caution users of existing playgrounds and athletic fields of potential exposure and ways to reduce exposure to toxins in waste tire material.

# Safer Playground and Synthetic Turf Materials

# **Playground Alternative**

Engineered wood fiber (EWF) is a safer and less expensive alternative to shredded tire mulch for use on playgrounds, with comparable fall protection. EWF is made from 100% virgin wood fiber and is not chemically treated in any way.

# Synthetic Turf Infill Alternative

Organic infill made from a coconut fiber, cork and rice husk blend is a safer alternative to crumb rubber that is 100% recyclable, odor free, non-toxic and mold resistant.

This bill is an important step in addressing potentially harmful exposures of children and athletes to known toxic chemicals while they are at play.

# Recycling of Waste Tires

Nearly 300 million car and truck tires are discarded every year, about one for every person. To address the problem of tire stockpiles emitting hazardous compounds into the environment, since 1995 the U.S. EPA has been encouraging the recycling of waste tires into playground mulch and synthetic turf athletic field infill. Although waste tires meet the Resource Conservation and Recovery Act's criteria for hazardous waste, they have received a special exemption for these uses.

Waste tires are ground up into pieces for use as playground mulch and processed into smaller pieces known as "crumb rubber" for use as synthetic turf infill. Use of recycled waste tires has grown over the last two decades. Thousands of playgrounds across the U.S. use shredded tire mulch as cushioning under outdoor play equipment. This includes nearly all Minneapolis public school playgrounds. Ninety-eight percent of the over 11,000 synthetic turf fields in the U.S. use crumb rubber infill.<sup>2</sup>

To leave a healthy legacy, Minnesota needs safe products and safe ways to make them.

# Safe products made safely

healthylegacy.org

Provided by Duluth Parents for Healthy Playgrounds

# **Toxic Chemicals Detected** in Recycled Waste Tire Materials

According to a chemical analysis conducted by Yale University,3 96 chemicals were found in samples of shredded rubber tire playground mulch. For half of these chemicals, there is no government testing - so whether they are safe for human health is unknown.

- Chemicals detected in shredded tire material include carcinogens, neurotoxins, respiratory/ eye/skin irritants and reproductive and developmental toxins.
- Chemicals detected include the brain toxins styrene, lead and cadmium, as well as carcinogens, arsenic, pyrene, carbon black, polycyclic hydrocarbons (PAHs), and butadiene.
- Another study confirms the presence of hazardous chemicals in tire mulch, including PAHs that are released through volatilization and can be inhaled. The authors caution, "Uses of recycled rubber tires, especially those targeting play areas and other facilities for children, should be a matter of regulatory concern."4
- Athletes playing on synthetic turf are exposed to chronic toxicity from PAHs, known carcinogens.5 When the material gets hot, off-gassing of volatile organic compounds (VOCs) into the air increases.
- There is concern that soccer goalies with chronic exposure to crumb rubber on synthetic turf fields may be at higher risk for lymphoma and leukemia cancers.6

# Contact us for more information:

• Jenna Grove • igrove@cleanwater.org 612-627-1539

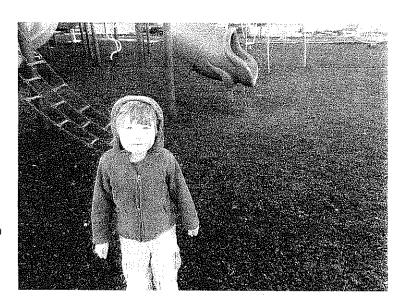

Kathleen Schuler

Kathleen@conservationminnesota.org 612-767-1570

"Children go to playgrounds almost daily, and gifted athletes are on the soccer field almost every day. That sort of cumulative exposure results in a buildup in their body of these toxic chemicals, and can result in a buildup of cellular damage that's caused by these chemicals, that can then result in disease years or decades late. Little children should not be put in a situation where they're forced to be in intimate contact with carcinogenic chemicals."

Dr. Philip Landrigan

Dean of Global Health at Mount Sinai Medical Center and leading expert on the effects of chemicals on children.

State of Minnesota Dept. of Feath

playgrounds containing crumb rubber to observe the following recommendations: The Minnesota Dept. of Health encourages all those using athletic fields and

- 1. Wash hands and exposed body parts aggressively after playing on the field.
- 2. Turn clothes inside out as soon as possible after using the field to avoid tracking dust and infill to other locations.
- 3. Keep beverages closed and in bags or coolers when not drinking to minimize contamination from field dust and fibers.
- 4. Be aware of signs of heat-related illness and dehydration. Fields can get excessively hot on warm, sunny days. Take all necessary precautions.
