Quiz: Skill Builders

Back

Question 1

Not yet
answered

What is a helpful tip for improving your eBiking skills?

- a. Keep your head and eyes up, don't look down at the markers when practicing maneuvers
- b. Challenge yourself by starting at the highest power mode
- c. Both A and B

Parent Participation

Consider this eBikes 101. It's great for anyone of any age who rides or is interested in eBikes.

Our recommendations:

- Parents, go through this course together with your kids. This is your opportunity to learn with them!
- If you're under the age of 16, ask your folks to join you now. Most parents will love to be part of something you're interested in, and you can discuss any confusing stuff with each other.

Self Assessment/ Readiness Check/ Types of E-Bikes

Class 1

- A Class 1 eBike is a pedal-assisted bike.
- It DOES NOT have a throttle and only gives you a boost when you're pedaling.
- The max assisted speed is 20 mph.

Class 2

- Class 2 eBikes have a throttle.
- You can take off, ride, and even control your speed with or without pedaling.
- The max assisted speed is 20 mph.

Class 3

- The Class 3 eBike is pedal-assist with no throttle.
- The max assisted speed is 28 mph.
- Some cities don't allow Class 3 eBikes on bike paths, sidewalks or mountain bike trails.

Depending on the Class of eBike, there might be a minimum age or helmet requirement where you ride.

What is an E-Bike VS What is not an E-Bike

Not an eBike:

- If the vehicle's motor exceeds 750 watts of power.
- If it can go faster than 20 mph using a throttle.
- If it has no pedals.

No longer an eBike:

- If it has unlimited or unlocked power modes that allow it to exceed 20 miles per hour with a throttle. It may not be legal on the street or trail.
- If you modify your eBike to increase its speed or defeat the manufacturer's power limits, it may be illegal for streets and trails. Plus, it may damage the motor and increase your risk of crashing because it wasn't designed to be ridden at higher speeds.

Protection Equipment

Things to check before ride

Check tires and spokes.
Tires must be properly inflated.

Check front and back brakes.
Squeeze brake levers to make sure
that they stop your bike

Check your handlebar
to make sure that it set
at the right height and angle

Check to make sure that your
seat is set at the correct height

Check wheels quick release skewer.
Make shure they are closed.

Check bicycle chain and gears.
If chain squeaks when you pedal,
clean and oil it.

Check you helmet.
Make sure there are
no cracks on surface.

Check front and back lights.
Rides should be always
been done with lights.

Rules of the Road/ Street Smarts

Left Turn

Right Turn

**Alternate
Right Turn**

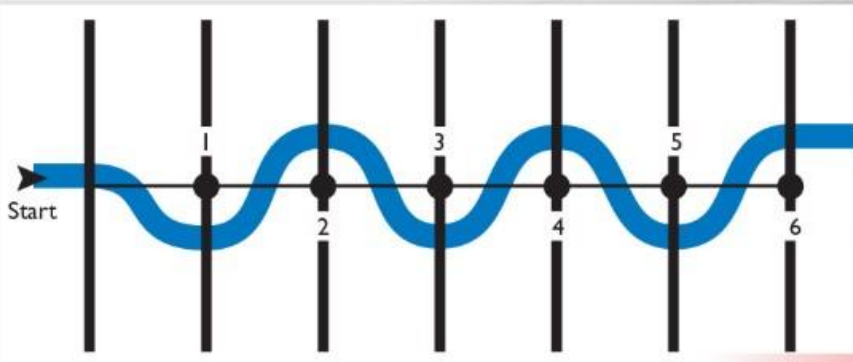

Stopping

Practice Drills

Tips:

- Keep your head and eyes up, searching ahead.
- Don't look down at the markers.
- Maintain a steady speed.
- Try not to brake while weaving through the markers.
- Make sure you have plenty of room after the last marker to stop or turn around.
