Agriculture program

Coffman cove has an ag class going this semester. There is one student in the class. The class is working on giving the student knowledge in aquaponics and hydroponics gardening, how to care for chickens and how to hatch chickens.

Thorne Bay has 1st and 2nd graders come out to the greenhouse every other week to learn how to plant, care for fish and the overall functioning of the aquaponics system.

Coffman Cove is collecting eggs and will be incubating, hatching and selling the chicks this spring to fulfill the FS23 grant we have.

Coffman Cove has citrus fruit trees coming and we will be starting a small orchard in the back part of the greenhouse.

Both greenhouses are working on getting ready for spring by cleaning and getting plants started.
