February 2026

3D SCIENCE SYSTEMS

Students in Mrs. Wind's and Ms. Haenitsch's Life Science classes have been working on Human Body Systems. To wrap up part of the unit, students were required to make a 3-D model of one of the following systems:

respiratory, nervous, skeletal, digestive, or circulatory. They researched a variety of ways to design their projects. Students got creative and designed the different systems using a variety of items to represent the required parts of each system.

SCHOLASTIC ACHIEVEMENTS!

Our Scholastic Bowl team continues to amaze us with their success. Earlier this month, the team finished their season undefeated and claimed the conference championship. Team standouts include Nathan Stauter, who was named to the All-Conference First Team, and Ronin Quick, who earned All-Conference Second Team honors.

S ENIOR ADVISORY INCENTIVE

As an incentive for seniors to remain focused throughout their final semester, the administration has created a special opportunity for them. Seniors who maintain a 90% or higher attendance rate, have all passing grades, and have not received any out-of-school suspensions will earn the privilege of early release. Each month, the administration will run reports to determine which students qualify for this reward. In the month of February, more than 170 seniors were awarded this privilege. We look forward to recognizing even more students throughout March as we continue our journey toward graduation!
