Directors Report

February 2019

The weather has caused us to reschedule many of the local district tours of the Tech Center. We are pushing some of them to the end of February. It has also caused more delays in the building trades' construction. Due to safety and weather concerns, we have hired a contractor to complete the roof on the tallest part of the new building. They started on February 5th so hopefully the weather will cooperate and they can complete the roof sheeting by the 18th.

We have had great success once again with regional competitions in Health Occupations, Business Professionals of America (networking students) and Skills USA (welding). They are all taking students to the state level competition requiring overnight stays in Grand Rapids.

The wiring rough in for the Fire Alarm Replacement in the Tech Center started on January 21st and was completed February 7th. The Electricians worked nights to minimize the disruption to the learning environment. The new alarms, lights and pull stations are scheduled for installation and testing over the coming weeks. We expect to have the project totally completed by Spring Break.
