

Technology Board Report

January 2019

Technology /TechCo

Completed a lot of updates to servers, software, and other equipment over the break. We also a great start on the security upgrades at the Nordic ECE building. By the time we have our board meeting we might have the new door readers, electronic strikes, entry intercom, and cameras all installed and functioning. There will be a few other small changes to make everything functional and efficient but this was the bulk of the upgrade on the technology side.

We have been working with Bates Township and a security vendor to create a unique key plan for all the locks at Bates. According to the quotes we have been given this is going to cost far less than previously lead to believe. We are currently waiting on the cabling and secured entry equipment and installation quote. This is the same equipment and installation we have installed in all our buildings to this point. The biggest variable is the cabling for the equipment as Bates may prove to be a very difficult building to pull wire through.

Happy New Year!
