

Executive Summary – Bond Approval for Miscellaneous Architectural Items

The District's Facility Assessment dated November 11, 2025, identifies several high-priority interior building needs under Section 1.0 Building Interior. These items include ADA compliance corrections, restroom renovations, casework and sink replacements, interior finish repairs, and various life-safety improvements that are essential to maintaining safe and functional learning environments.

Recommendation

Because the scope and cost of these interior upgrades exceed what can be supported through annual operating budgets, administration recommends the Board consider the approval of bond funding not to exceed \$500,000 for miscellaneous architectural items referenced in the 1.0 Building Interior section of the Facility Assessment dated 11/11/25.

This allocation will allow the District to address documented deficiencies, improve accessibility and safety, prevent accelerated deterioration, and complete necessary interior improvements aligned with the long-term facility plan with minimal tax impact.
