

Facilities Meeting

Track: As of 2:00 PM today the 11th I have not received the plans to fix the track. I did meet with all parties involved on Tuesday and they said they would fix it, I just don't know how yet.

Field work: Sod and seeding is to be done on Friday the 12th. The company laying the sod did put a small application of fertilizer down. I would recommend another application of an organic based fertilizer in the next week or two along with two fungicide Applications spaced two weeks apart. This cost would run between \$1200 to \$1400. With the high heat and humidity I feel it is a must.

Inside Work: Everything is on schedule or ahead. Asbestos removal is 9 days ahead, so we should have access to the west end on the 19th. Some classrooms could be moved as early as the 22nd of July.

Washington School Drive: The city and I looked at the problem with the drive last week. Water is running off our parking lot into the road and down the adjacent alley instead of running down our ditch. They have proposed a way to fix this problem that will help the city and benefit us due to less rutting where our buses pull in. The only catch is they would like us to oil and chip the parking lot to keep loose rock from entering their repair work.
