8451 - PEDICULOSIS (HEAD LICE)

Head lice is a universal problem and is particularly prevalent among elementary school-age children. Control of lice infestation is best handled by adequate treatment of the infested person and his/her immediate household and other close personal contacts.

Communication from the school to parents directly and through parent and classroom education to the students will help increase the awareness for both parents and child. Parents need to continually observe their child for this potential problem and treat adequately and appropriately as necessary.

If a child in the District is found to have lice, the child's parent will be contacted to have the child treated and to pick him/her up at the end of the school day. The District practices a policy of "no live lice".

The Superintendent shall prepare administrative guidelines to provide for the implementation of this policy.
