**Arkansas Computer Science and Computing Standards for High School Game Development and Design**

**Introduction**

The Arkansas Computer Science and Computing Initiative standards for high school courses are designed to provide understandings of concepts in computer science that are necessary for students to function in an ever-changing technological world. Through these standards, students will explore, apply, and move toward mastery in skills and concepts related to Computational Thinking and Problem Solving; Data, Information, and Security; Algorithms and Programs; Computers and Communications; and Professionalism and Impacts of Computing. These standards help students learn to accomplish tasks and solve problems independently and collaboratively. These standards give students the tools and skills needed to be successful in college and careers including computer science, computing, and other fields.

State developed pathways within the Arkansas Computer Science and Computing Initiative all begin with common year-one standards which allow for consistency across the state and all schools. These common standards address the basic knowledge and skills needed for any student entering a technology-based field.

The course standards have been grouped into one-credit (typically yearly) standards to afford the classroom educator additional flexibility in their curriculum choices; however, the course codes remain based on one-half credit (typically semester). Each state-developed pathway will have three credits (six pathway specific course codes) worth of Computer Science Flex Credit (465XXX) course codes.

The Arkansas State Board of Education (SBE) does not place any prerequisites on the Arkansas Computer Science and Computing Initiative high school courses, but allows for schools to place students in any of the courses based on ability and desire. The Arkansas Department of Education (ADE) recommends that districts develop and formally adopt a written policy outlining placement protocols. Evaluation tools and placement criteria will be the responsibility of the local districts.

The SBE and ADE authorize schools to enroll students across levels in the same sections of the master schedule (a.k.a. stacking) as long as the number of students does not exceed Standards of Accreditation maximums and/or ratios and the school can reasonably assure a high-quality educational experience for all students within that section.

Implementation of the Arkansas Computer Science Standards for High School Game Development and Design begins during the 2021-2022 school year.

Course Titles:        Game Development and Design
Course/Unit Credit:    0.5 credit per listed course code

|  | Game Development and Design Year 1 - Level 1 / Level 2 | Game Development and Design Year 2 - Level 3 / Level 4 | Game Development and Design Advanced - Year 3 |
|---|---|---|---|
| **Game Development and Design** | 465610 / 465620 | 465630 / 465640 | 465650 / 465660 |

Teacher Licensure:    Please refer to the Course Code Management System (https://adedata.arkansas.gov/ccms/) for the most current licensure codes.
Grades:           9-12
Prerequisites:      There are no ADE established course prerequisites for any of the Arkansas Computer Science and Computing Initiative high school courses; it is up to the local district to determine placement based on student ability.

**Computer Science and Computing Practices**

**Students exhibit proficiency in computer science and computing through:**

**Communication -** Students effectively communicate, using accurate and appropriate terminology, when explaining the task completion or problem solving strategies used. They recognize that creating good documentation is an ongoing and important part of the communication process.

> **Collaboration -** Students productively work with others while ensuring multiple voices are heard and considered. They understand that diverse thoughts may lead to creative solutions and that some problems may be best solved collaboratively.

> **Storytelling -** Students creatively combine multimedia tools, such as graphics, animations, and videos with research, writing, and oral presentations to create ethical, data-driven stories.

**Professionalism -** Students embrace professionalism by demonstrating skills and behaviors necessary for success in technical careers.

> **Ethics and Impact -** Students comprehend the ramifications of actions prior to taking them. They are aware of their own digital and cyber presence and its impact on other individuals and society.

> **Inclusion -** Students encourage diversity in the field of computer science and computing regardless of race, ethnicity, gender, or other differences.

> **Learning by Failure -** Students reflect upon and critique their work while embracing a willingness to seek feedback and constructive instruction from teachers and peers. They utilize the feedback to continually improve current projects, educational experiences, knowledge, and confidence.

> **Perseverance -** Students expect difficulties and persist in overcoming challenges that occur when completing tasks. They recognize making and correcting mistakes is necessary for the learning process while problem solving.

**Understanding -** Students recognize patterns, utilize tools, and apply problem solving strategies to build understanding, find solutions, and successfully deliver high-quality work.

> **Patterns -** Students understand and utilize the logical structure of information through identifying patterns and creating conceptual models. They decompose complex problems into simpler modules and patterns.

> **Problem Solving -** Students exhibit proficiency through the process of identifying and systematically solving problems. They recognize problem solving is an ongoing process.

> **Research -** Students purposefully gather information and seek to expand their knowledge through various methods and mediums. They embrace the practice of gaining knowledge to develop novel approaches for solving problems and addressing issues they have not previously encountered, in addition to merely searching for answers.

> **Tools -** Students evaluate and select tools to be used when completing tasks and solving problems. They understand that appropriate tools may include, but are not limited to, their mind, pencil and paper, manipulatives, software applications, programming languages, or appropriate computing devices.

**Arkansas Computer Science and Computing Standards for High School Game Development and Design**

| Strand | Content Cluster |
|---|---|
| Computational Thinking and Problem Solving | |
| | 1. Students will analyze and utilize problem-solving strategies. |
| | 2. Students will analyze and utilize connections between concepts of mathematics and computer science. |
| Data, Information, and Security | |
| | 3. Students will analyze and utilize data through the use of computing devices. |
| | 4. Students will analyze and utilize concepts of cybersecurity. |
| Algorithms and Programs | |
| | 5. Students will create, evaluate, and modify algorithms. |
| | 6. Students will create programs to solve problems. |
| Computers and Communications | |
| | 7. Students will analyze the utilization of computers within industry. |
| | 8. Students will analyze communication methods and systems used to transmit information among computing devices. |
| | 9. Students will utilize appropriate hardware and software. |
| Professionalism and Impacts of Computing | |
| | 10. Students will analyze the impacts of technology and professionalism within the computing community. |
| | 11. Students will demonstrate understanding of storytelling with data and appropriately communicate about technical information. |

**Understanding the Arkansas Computer Science and Computing Standards Documents:**
- This Arkansas Department of Education curriculum standards document is intended to assist in district curriculum development, unit design, and to provide a uniform, comprehensive guide for instruction.
- The goal for each student is proficiency in all academic standards for the course/year in which the student is enrolled.
- The Practice Standards are intended to be habits of mind for all students and were written broadly in order to apply to all grades/levels. The Practice Standards are not content standards and are not intended to be formally assessed.
- Notes (NOTE:) and examples given (e.g.,) found within the document are not mandated by the Arkansas State Board of Education, but are provided for clarification of the standards by the Arkansas Department of Education and/or the standards drafting committee. The notes and examples given are subject to change as understandings of the standards evolve.
- Within the high school documents, the numbering for standards is read as: Course Abbreviation - Year - Content Cluster - Standard. Example: "CSPG.Y1.2.3" would be Computer Science Programming - Year 1 - Content Cluster 2 - Standard 3.
- Within the Coding Block document, the numbering for standards is read as: Course Abbreviation - Content Cluster - Standard. Example: "CSCB.1.2" would be Coding Block, Content Cluster 1, Standard 2.
- Within the K-8 Computer Science Standards documents, the numbering for standards is read as: Course Abbreviation - Grade - Content Cluster - Standard. Example: "CSK8.G1.2.3" would be K-8, Grade 1, Content Cluster 2, Standard 3
- Ancillary documents and supporting information may be released to assist in further understanding of the standards with possible classroom implementation strategies included.

**"Research" and Learning**

The Arkansas Department of Education Office of Computer Science recognizes that the use of the term "research" as an action verb within academic standards is not mainstream, though not unheard of, and exists as a measurable objective within other Arkansas K-12 academic standards. The members of the internal team, composed of the State Director of Computer Science and nine state-wide Computer Science Specialists, discussed this at length amongst ourselves and with many committee members. While there existed varying opinions for various reasons, the internal team opted to keep "research" as an action verb within the standards for the following reasons:
1. The internal team believes that this use of "research" and the skill-building activities students will undertake while performing said research will produce students that have a skillset which industry representatives have identified as missing from workers entering technical job fields.
2. As the field of Computer Science and Computing is ever changing and growing, professionals and students within this field must conduct informal research on an almost daily basis to maintain relevant knowledge and skills.
3. The use of "research" within this document does not determine classroom implementation; however, it is used to indicate that the student should take individual and active efforts to seek out knowledge to develop novel approaches for solving problems and addressing issues they have not previously encountered, in addition to merely searching for answers.
4. The use of "research" should not infer that a student should be required to do an extensive qualitative or quantitative research project from the use of "research" anywhere in this document; however, a more formal research project is not prohibited if the teacher feels it is appropriate.

**Strand:** Computational Thinking and Problem Solving
**Content Cluster 1:** Students will analyze and utilize problem-solving strategies.

| Year 1 - Level 1 / Level 2 | Year 2 - Level 3 / Level 4 | Year 3 - Advanced |
|---|---|---|
| CSGD.Y1.1.1<br>Leverage problem-solving strategies to solve problems of level-appropriate complexity | CSGD.Y2.1.1<br>Leverage problem-solving strategies to solve problems of level-appropriate complexity | CSGD.Y3.1.1<br>Leverage problem-solving strategies to solve problems of level-appropriate complexity |
| NOTE:<br>Problem-solving strategies that encompass computational thinking include, but are not limited to, abstraction, algorithm development, decomposition, and pattern recognition. | | |
| CSGD.Y1.1.2<br>Analyze and utilize multiple representations of problem-solving logic used to solve problems of appropriate complexity | CSGD.Y2.1.2<br>Analyze and utilize multiple representations of problem-solving logic used to solve problems of appropriate complexity | CSGD.Y3.1.2<br>Analyze and utilize multiple representations of problem-solving logic used to solve problems of appropriate complexity |
| NOTE:<br>Representations may include, but are not limited to, backlog, decision matrix, design brief, documentation, fault tree analysis, flowchart, pseudocode, and sprints. | | |
| CSGD.Y1.1.3<br>Analyze and utilize collaborative methods in problem solving of level-appropriate complexity | CSGD.Y2.1.3<br>Analyze and utilize collaborative methods in problem solving of level-appropriate complexity | CSGD.Y3.1.3<br>Analyze and utilize collaborative methods in problem solving of level-appropriate complexity |
| NOTE:<br>Collaborative methods may include, but are not limited to, distributive (divide and conquer), paired programming, and redundant parallel. | | |
| CSGD.Y1.1.4<br>Analyze and utilize level-appropriate troubleshooting strategies for hardware and software | CSGD.Y2.1.4<br>Analyze and utilize level-appropriate troubleshooting strategies for hardware and software | CSGD.Y3.1.4<br>Analyze and utilize level-appropriate troubleshooting strategies for hardware and software |
| *This standard is not specifically required until Year 2* | CSGD.Y2.1.5<br>Decompose problems of level-appropriate complexity | CSGD.Y3.1.5<br>Decompose problems of level-appropriate complexity |
| NOTE CSGD Y2:<br>Decomposition involves the computational thinking related to modeling situations and phenomena as objects. | | |

6

**Strand:** Computational Thinking and Problem Solving
  **Content Cluster 2:** Students will analyze and utilize connections between concepts of mathematics and computer science.

| Year 1 - Level 1 / Level 2 | Year 2 - Level 3 / Level 4 | Year 3 - Advanced |
|---|---|---|
| CSGD.Y1.2.1<br>Interpret relational and logical expressions of level-appropriate complexity using comparison and Boolean operators | CSGD.Y2.2.1<br>Interpret compound expressions using multiple relational and logical operators | *Continuation of this standard is not specifically included or excluded* |
| NOTE:<br>Boolean operators include AND, OR, NOT, and XOR.<br>Comparison operators may include, but are not limited to, <, >, and !=. | | |
| CSGD.Y1.2.2<br>Classify the types of information that can be stored as variables and analyze the appropriateness of each (e.g., Booleans, characters, integers, floating points, strings) | *Continuation of this standard is not specifically included or excluded* | *Continuation of this standard is not specifically included or excluded* |
| CSGD.Y1.2.3<br>Analyze how computer science concepts relate to the field of mathematics | *Continuation of this standard is not specifically included or excluded* | *Continuation of this standard is not specifically included or excluded* |
| NOTE:<br>Concepts may include, but are not limited to, different division methods (e.g., integer, long, modular), random number generation, domain, maximum, mean, minimum, mode, and range. | | |
| CSGD.Y1.2.4<br>Discuss and apply concepts of abstraction | CSGD.Y2.2.4<br>Analyze and utilize concepts of abstraction as modeling and abstraction as encapsulation | *Continuation of this standard is not specifically included or excluded* |
| NOTE:<br>Abstraction is the process of reducing information and detail to facilitate focus on relevant concepts and functionality (displaying only essential information while hiding the details). | | |
| CSGD.Y1.2.5<br>Perform operations of level-appropriate complexity with binary, decimal, and hexadecimal numbers | CSGD.Y2.2.5<br>Perform operations of level-appropriate complexity with binary, octal, decimal, and hexadecimal numbers | *Continuation of this standard is not specifically included or excluded* |
| NOTE:<br>Operations may include, but are not limited to, addition, subtraction, multiplication, division, and conversion. | | |

Arkansas Computer Science and Computing Standards for High School Game Development and Design

**Strand:** Data, Information, and Security
　　　**Content Cluster 3:** Students will analyze and utilize data through the use of computing devices.

| Year 1 - Level 1 / Level 2 | Year 2 - Level 3 / Level 4 | Year 3 - Advanced |
|---|---|---|
| CSGD.Y1.3.1<br>Define, store, access, and manipulate level-appropriate data (e.g., primitive, linear) | CSGD.Y2.3.1<br>Create programs to store, access, and manipulate level-appropriate data (e.g., structured data, objects) | CSGD.Y3.3.1<br>Utilize data structures (e.g., graphs, linked lists, maps, queues, sets, stacks, trees) based on functionality, performance, and storage tradeoffs to support the creation of larger computational artifacts |
| NOTE:<br>Primitive data may include, but is not limited to, Boolean, character, double, float, and integer.<br>Linear data may include, but is not limited to, arrays, lists, strings, and vectors.<br>Structured data may include, but is not limited to, arrays, classes, linked lists, maps, multidimensional arrays, and structs.<br>Objects may include, but are not limited to, constructors, data members, and methods.<br>Defining, storing, and accessing may include, but are not limited to, type declaration, variables, and modifiers (e.g., final, pass-by-value, pass-by-reference parameters, private, protected, public).<br>Manipulating data may include, but is not limited to, arranging (e.g., queuing, stacking), bit manipulation, casting, rearranging, and sorting. | | |
| CSGD.Y1.3.2<br>Define and discuss different examples of level-appropriate quantitative and qualitative data | CSGD.Y2.3.2<br>Define and discuss different examples of level-appropriate quantitative and qualitative data | *Continuation of this standard is not specifically included or excluded* |
| *This standard is not specifically required until Year 2* | CSGD.Y2.3.3<br>Research, discuss, and create level-appropriate programs to model and simulate probabilistic and real-world scenarios | CSGD.Y3.3.3<br>Simulate a system utilizing an abstract model by reproducing its behavior |
| NOTE:<br>Probabilistic scenarios may include, but are not limited to, flipping a coin, random walkers, and rolling dice.<br>Real-world scenarios may include, but are not limited to, city population and predator-prey.<br><br>NOTE CSGD Y3:<br>Abstract models can include computation or computer models, and may include, but are not limited to, cellular automata, data generation, physics simulations and time steps, and pseudo-random number generation. | | |
| CSGD.Y1.3.4<br>Analyze, utilize, and visually represent level-appropriate data | CSGD.Y2.3.4<br>Analyze, utilize, and visually represent level-appropriate static and dynamic data | *Continuation of this standard is not specifically included or excluded* |
| NOTE:<br>Visual representation tools may include, but are not limited to, analytics reports, graphical representations, programming language libraries, and spreadsheets.<br>Dynamic data may include, but is not limited to, network traffic, real-time weather data, sensor statuses, stock market valuations, and system status. | | |

2020

10

**Strand:** Data, Information, and Security

**Content Cluster 4:** Students will analyze and utilize concepts of cybersecurity.

| Year 1 - Level 1 / Level 2 | Year 2 - Level 3 / Level 4 | Year 3 - Advanced |
|---|---|---|
| CSGD.Y1.4.1 Identify the five pillars of cybersecurity and evaluate the relevance of each pillar to computer science concepts | CSGD.Y2.4.1 Apply the five pillars of cybersecurity as applicable to level-appropriate computer science concepts | *Continuation of this standard is not specifically included or excluded* |
| NOTE: Additional concepts and key terms of the five pillars of cybersecurity (confidentiality, integrity, availability, non-repudiation, and authentication) may include, but are not limited to, access control paradigms, accountability, authorization, least-privilege, and need-to-know. | | |
| CSGD.Y1.4.2 Research and describe different roles within the hacking community (e.g., white hat, black hat, gray hat hacking), including positive and negative motivations, significant impacts, and social stereotypes | *Continuation of this standard is not specifically included or excluded* | *Continuation of this standard is not specifically included or excluded* |
| NOTE: White hat hacking may include, but is not limited to, bug bounty programs and contracted penetration testing. A significant impact example may include, but is not limited to, Charlie Miller's compromisation of Fiat Chrysler vehicles. Black hat hacking may include, but is not limited to, the unauthorized processes of accessing systems to destroy, compromise, or steal data and deny access to services or systems. A significant impact example may include, but is not limited to, Behzad Mesri's alleged theft of data from Home Box Office (HBO) and subsequent ransom demands. Gray hat hacking may include, but is not limited to, unauthorized processes of accessing systems to report, correct, and draw attention to security vulnerabilities. A significant example of gray hat hacking is intentionally not included; students and teachers are encouraged to explore and discuss the nuances of "right versus wrong" and motivations within this community, including nation-state actions. | | |
| CSGD.Y1.4.3 Research and describe the impacts of ransomware, trojans, viruses, and other malware | CSGD.Y2.4.3 Research and describe common attacks on hardware, software, and networks | CSGD.Y3.4.3 Research security issues that lead to compromised video games and security measures to mitigate these issues |
| NOTE: Common hardware attacks may include, but are not limited to, clones, hardware trojans, and side-channel attacks. Common software attacks may include, but are not limited to, buffer overflows, deployment errors, software bugs, and Structured Query Language (SQL) and command injection. Common network attacks may include, but are not limited to, man-in-the-middle attacks, packet sniffing, protocol abuse, and spoofing of media access control (MAC) or internet protocol (IP) addresses. | | |

**Strand:** Algorithms and Programs
> **Content Cluster 5:** Students will create, evaluate, and modify algorithms.

| Year 1 - Level 1 / Level 2 | Year 2 - Level 3 / Level 4 | Year 3 - Advanced |
|---|---|---|
| CSGD.Y1.5.1<br>Design and implement level-appropriate algorithms that use iteration, selection, and sequence | CSGD.Y2.5.1<br>Design and implement level-appropriate algorithms that use iteration, recursion, selection, and sequence | CSGD.Y3.5.1<br>Design and implement algorithms to solve student-identified problems of level-appropriate complexity |
| CSGD.Y1.5.2<br>Illustrate the flow of execution of algorithms in level-appropriate programs including branching and looping | *Continuation of this standard is not specifically included or excluded* | *Continuation of this standard is not specifically included or excluded* |
| NOTE:<br>Illustrations may include, but are not limited to, flowcharts and pseudocode. | | |
| CSGD.Y1.5.3<br>Evaluate the qualities of level-appropriate student-created and non-student-created algorithms | CSGD.Y2.5.3<br>Evaluate the qualities of level-appropriate student-created and non-student-created algorithms including classic search and sort algorithms<br><br>CSGD Y2: Research how to evaluate these algorithms in terms of time and space complexities (e.g., Big O notation) | CSGD.Y3.5.3<br>Evaluate the qualities of level-appropriate student-created and non-student-created algorithms in terms of time and space complexities (e.g., Big O notation) |
| NOTE:<br>Evaluation tools may include, but are not limited to, code review and test cases.<br>Qualities may include, but are not limited to, correctness, efficiency, exception handling, input/data/model validation, portability, readability, scalability, and usability.<br><br>NOTE CSGD Y2-Y3:<br>Algorithms may include, but are not limited to, maze creation (e.g., Rogue-like), model loading, pathfinding, world generation, and world-state loading/saving. | | |
| CSGD.Y1.5.4<br>Use a systematic approach to detect and resolve errors in a given algorithm | CSGD.Y2.5.4<br>Use a systematic approach to detect and resolve errors in a given algorithm | *Continuation of this standard is not specifically included or excluded* |
| *This standard is not specifically required until Year 2* | CSGD.Y2.5.5<br>Analyze game elements of analog games (e.g., board, card, dice) and how those elements can be represented as algorithms for digital games | *Continuation of this standard is not specifically included or excluded* |

Arkansas Department of Education - Division of Elementary and Secondary Education
2020

15

**Strand:** Computers and Communications

    **Content Cluster 7:** Students will analyze the utilization of computers within industry.

| Year 1 - Level 1 / Level 2 | Year 2 - Level 3 / Level 4 | Year 3 - Advanced |
|---|---|---|
| CSGD.Y1.7.1<br>Identify hardware and software specific to carrying out the mission of regional industries | CSGD.Y2.7.1<br>Utilize hardware and/or software to solve level-appropriate industry-based problems | *Continuation of this standard is not specifically included or excluded* |
| CSGD.Y1.7.2<br>Research advancing and emerging technologies (e.g., artificially intelligent agents, blockchain, extended reality, Internet of Things (IoT), machine learning, robotics) | *Continuation of this standard is not specifically included or excluded* | *Continuation of this standard is not specifically included or excluded* |
| *This standard is not specifically required until Year 2* | CSGD.Y2.7.3<br>Discuss common asset creation techniques (e.g., 3D models, images, music, sounds), and create and utilize level-appropriate assets (e.g., 2D/3D models, animations, music, sound effects, textures, visual effects) in a game | CSGD.Y3.7.3<br>Create and utilize level-appropriate assets (e.g., 2D/3D models, animations, music, sound effects, textures, visual effects) in a game |

Arkansas Computer Science and Computing Standards for High School Game Development and Design
Arkansas Department of Education - Division of Elementary and Secondary Education
2020

16

**Strand:** Computers and Communications
     **Content Cluster 8:** Students will analyze communication methods and systems used to transmit information among computing devices.

| Year 1 - Level 1 / Level 2 | Year 2 - Level 3 / Level 4 | Year 3 - Advanced |
|---|---|---|
| CSGD.Y1.8.1<br>Utilize the command line to accomplish common network troubleshooting tasks at an introductory level | *Continuation of this standard is not specifically included or excluded* | *Continuation of this standard is not specifically included or excluded* |
| NOTE:<br>Common network troubleshooting tasks may include, but are not limited to, viewing internal IP address information (e.g., ipconfig /all); viewing external IP address information using an external service (e.g., ifconfig.me, myip.com, whatsmyip.com); validating communication with a remote system (e.g., ping); tracing path of communication to a remote system (e.g., traceroute); and releasing and renewing IP addresses (e.g., ipconfig /renew). | | |
| CSGD.Y1.8.2<br>Research and describe common networking concepts at an introductory level | *Continuation of this standard is not specifically included or excluded* | *Continuation of this standard is not specifically included or excluded* |
| NOTE:<br>Networking concepts may include, but are not limited to, different types of networks (e.g., local area network (LAN), wide area network (WAN)); various common topologies; the role of a MAC address; local versus public IP and how they are assigned; Internet Protocol version 4 (IPv4) and Internet Protocol version 6 (IPv6) addressing schemes; role of Domain Name System (DNS); the hierarchical nature of networks; purpose of virtual private networks (VPN); signal carriers for networks (e.g., copper, fiber optic, radio); purpose of firewalls; network access roles (e.g., employee versus guest, staff versus student); role of internet service providers (ISP); wireless connectivity; client-server relationship versus peer-to-peer (P2P); role of common internet protocols; and secure versus insecure protocols. | | |
| CSGD.Y1.8.3<br>Research and describe modems, network interface cards, routers (e.g., consumer, industrial), switches, and wireless access points, and identify their purposes within a network | *Continuation of this standard is not specifically included or excluded* | *Continuation of this standard is not specifically included or excluded* |
| CSGD.Y1.8.4<br>Describe the importance of creating and using common rules for communication and the utilization of common network protocols including the relationship between client and server | CSGD.Y2.8.4<br>*Continuation of this standard is not specifically included or excluded* | *Continuation of this standard is not specifically included or excluded* |
| NOTE:<br>Discussions of common rules for communications may include, but are not limited to, the Open Systems Interconnection (OSI) Model and packet communication. Common network protocols may include, but are not limited to, DNS, Hypertext Transfer Protocol (HTTP)/ Secure Hypertext Transfer Protocol (HTTPS), Simple Mail Transfer Protocol (SMTP)/Post Office Protocol (POP)/Internet Message Access Protocol (IMAP), and Telnet/Secure Shell (SSH). | | |

Arkansas Computer Science and Computing Standards for High School Game Development and Design
Arkansas Department of Education - Division of Elementary and Secondary Education
2020

17

**Strand:** Computers and Communications
      **Content Cluster 9:** Students will utilize appropriate hardware and software.

| Year 1 - Level 1 / Level 2 | Year 2 - Level 3 / Level 4 | Year 3 - Advanced |
|---|---|---|
| CSGD.Y1.9.1<br>Compare and contrast computer programming paradigms (e.g., functional, imperative, object-oriented) | *Continuation of this standard is not specifically included or excluded* | *Continuation of this standard is not specifically included or excluded* |
| CSGD.Y1.9.2<br>Research, describe, and utilize at an appropriate level:<br>   ● debugging strategies<br>   ● integrated development environments (IDE)<br>   ● source-code editors<br>   ● version control strategies | CSGD.Y2.9.2<br>Use collaboration tools and version control systems in a group software project of appropriate complexity<br><br>CSGD Y2: Include researching collaboration in the development of a large-scale computational artifact (e.g., review the process through which an open-source software project hosted on GitHub has improved over time) | CSGD.Y3.9.2<br>Contribute to team collaboration in the development of a computational artifact (e.g, creating and managing repositories) |
| CSGD.Y1.9.3<br>Classify layers of software (e.g., applications, drivers, firmware, operating systems) utilized within various platforms (e.g., Android, ChromeOS, iOS, Linux, macOS, Windows) | *Continuation of this standard is not specifically included or excluded* | *Continuation of this standard is not specifically included or excluded* |
| CSGD.Y1.9.4<br>Identify and describe the purpose of hardware components within various personal computing platforms | CSGD.Y2.9.4<br>Research various hardware components (e.g., augmented/virtual reality devices, game controllers, input and output devices, robotics components, sensors) and their functionality in modern game design | CSGD.Y3.9.4<br>Research and utilize various hardware components (e.g., augmented/virtual reality devices, game controllers, input and output devices, robotics components, sensors) as they relate to student-developed computational artifacts |
| NOTE:<br>Hardware components include, but are not limited to, central processing units (CPU), chassis, cooling components, graphics cards, input/output devices, memory, motherboards, power supplies, and storage devices.<br><br>NOTE CSGD Y2-Y3:<br>Research includes, but is not limited to, the field and careers of simulation. | | |
| *This standard is not specifically required until Year 2* | CSGD.Y2.9.5<br>Research a level-appropriate game engine and supporting libraries (e.g., images, sounds, sprites, text effects) | CSGD.Y3.9.5<br>Utilize a level-appropriate game engine and supporting libraries (e.g., images, sounds, sprites, text effects) |

18

**Strand:** Professionalism and Impacts of Computing

   **Content Cluster 10:** Students will analyze the impacts of technology and professionalism within the computing community.

| Year 1 - Level 1 / Level 2 | Year 2 - Level 3 / Level 4 | Year 3 - Advanced |
|---|---|---|
| CSGD.Y1.10.1 Research and describe the risks and risk mitigation strategies associated with the utilization and implementation of social media and other digital technology implications | *Continuation of this standard is not specifically included or excluded* | *Continuation of this standard is not specifically included or excluded* |
| NOTE: Risks include, but are not limited to, cyberbullying, identity theft, impersonation, and social engineering attacks. Implications may include, but are not limited to, employability, legal, physical, psychological, and social access.<br><br>NOTE CSGD: Other relevant topics may include, but are not limited to, copyright laws concerning assets, game addiction, game rating systems (e.g., Entertainment Software Rating Board (ESRB), International Age Rating Coalition (IARC)), loot boxes, and microtransactions. | | |
| *This standard is not specifically required until Year 2* | CSGD.Y2.10.2 Research and describe issues related to creating and enforcing cyber-related laws and regulations (e.g., ethical challenges, policy vacuum, privacy versus security, unintended consequences) | *Continuation of this standard is not specifically included or excluded* |
| CSGD.Y1.10.3 Research and describe the potential benefits associated with the utilization and implementation of social media and other digital technologies | *Continuation of this standard is not specifically included or excluded* | *Continuation of this standard is not specifically included or excluded* |
| NOTE: Potential benefits may include, but are not limited to, brand building, crowdsourcing, personal promotion awareness, and project funding. | | |
| CSGD.Y1.10.4 Research and describe the relationship between access and security (e.g., active and passive data, convenience, data mining, digital marketing, online wallets, privacy, theft of personal information) | CSGD.Y2.10.4 Identify the ethical implications encountered in the curation, management, and monetization of data (e.g., harvesting, information overload, knowledge management repositories, sharing, summarizing) | *Continuation of this standard is not specifically included or excluded* |
| *This standard is not specifically required until Year 2* | CSGD.Y2.10.5 Explain advantages and disadvantages of various software life cycle processes (e.g., Agile, spiral, waterfall) | CSGD.Y3.10.5 Utilize an appropriate development life cycle process (e.g., Agile, spiral, waterfall) while building a project of level-appropriate complexity |

Arkansas Computer Science and Computing Standards for High School Game Development and Design

2020

19

| | | |
|---|---|---|
| CSGD.Y1.10.6<br>Research the history of computing devices and their impact on society | CSGD.Y2.10.6<br>Research the role of play and sport in human culture and how analog games have impacted the development of digital games | *Continuation of this standard is not specifically included or excluded* |
| CSGD.Y1.10.7<br>Research and identify diverse careers and career opportunities (e.g., accessibility, availability, demand) that are influenced by computer science and the technical and soft skills needed for each | CSGD.Y2.10.7<br>Demonstrate industry-relevant technical and soft skills | CSGD.Y3.10.7<br>Demonstrate industry-relevant technical and soft skills |
| *This standard is not specifically required until Year 2* | CSGD.Y2.10.8<br>Classify the roles and responsibilities of each member on a game design team (e.g., animator, artist, designer, producer, programmer, project manager, quality assurance, sound engineer) | CSGD.Y3.10.8<br>Utilize team roles in the game development and design process |
| *This standard is not specifically required until Year 2* | CSGD.Y2.10.9<br>Identify the components of a quality professional digital portfolio | CSGD.Y3.10.9<br>Evaluate the quality and impact of a professional digital portfolio |
| NOTE CSGD Y2-Y3 :<br>Industry-relevant professional portfolio components may include, but are not limited to, curriculum vitae (CV), GitHub or similar repository, LinkedIn profile, and resume. | | |
| *This standard is not specifically required until Year 2* | CSGD.Y2.10.10<br>Create and maintain a digital collection of self-created work | CSGD.Y3.10.10<br>Create and maintain a professional digital portfolio comprised of self-created work |
| NOTE CSGD Y2-Y3:<br>Self-created works may include, but are not limited to, diagrams, games, media, and source code. | | |
| *This standard is not specifically required until Year 3* | *This standard is not specifically required until Year 3* | CSGD.Y3.10.11<br>Utilize and model effective professional project management tools |
| NOTE CSGD Y2-Y3:<br>Project management tools may include, but are not limited to, Gantt chart, Gemba Walk, strengths-weaknesses-opportunities-threats (SWOT) analysis, Trello, and other Lean thinking strategies. | | |
| *This standard is not specifically required until Year 2* | CSGD.Y2.10.12<br>Discuss diverse game development and design career pathways, careers beyond game development and design that utilize similar skills, and the educational requirements for those careers | *Continuation of this standard is not specifically included or excluded* |

**Strand:** Professionalism and Impacts of Computing
     **Content Cluster 11:** Students will demonstrate understanding of storytelling with data and appropriately communicate about technical information.

| Year 1 - Level 1 / Level 2 | Year 2 - Level 3 / Level 4 | Year 3 - Advanced |
|---|---|---|
| CSGD.Y1.11.1<br>Communicate basic technical information effectively to diverse audiences, including but not limited to, non-technical audience members | *Continuation of this standard is not specifically included or excluded* | *Continuation of this standard is not specifically included or excluded* |
| NOTE:<br>Technical information may include, but is not limited to, collecting or collected data, computing hardware, cyber hygiene, networking concepts, programming paradigms, and troubleshooting concepts. | | |
| CSGD.Y1.11.2<br>Describe and utilize the concepts of storytelling with data | *Continuation of this standard is not specifically included or excluded* | *Continuation of this standard is not specifically included or excluded* |
| NOTE:<br>Storytelling concepts may include, but are not limited to, identifying the knowledge level of the intended audience; developing a compelling narrative; creating appealing visualizations appropriate for the intended audience and that enhance the narrative; remaining objective and avoiding biases; and avoiding the censoring of data.<br><br>NOTE CSGD:<br>Narrative elements of gameplay are not included within the storytelling concepts required to meet this standard. | | |
| CSGD.Y1.11.3<br>Describe the following common types of data bias:<br>   ● confirmation bias<br>   ● confounding variables<br>   ● outliers<br>   ● overfitting/underfitting<br>   ● selection bias | *Continuation of this standard is not specifically included or excluded* | *Continuation of this standard is not specifically included or excluded* |
| CSGD.Y1.11.4<br>Compare and contrast causation and correlation | *Continuation of this standard is not specifically included or excluded* | *Continuation of this standard is not specifically included or excluded* |
| CSGD.Y1.11.5<br>Compare and contrast interpreting data, inferring using data, and implicating with data | *Continuation of this standard is not specifically included or excluded* | *Continuation of this standard is not specifically included or excluded* |
