

KAUFMAN ISD - MAINTENANCE REPORT MARCH 2026

The Kaufman ISD maintenance team has continued to work on improvement projects around the district. In addition to those projects, there were over 150 campus based work orders that were completed during the month of February.

Here are a few of the projects that the team has been working on this month:

The maintenance crew continued to work on lift stations around the district. The purpose of a lift station is to take water from a low location and pump it to higher ground so it can be properly evacuated through the city sewer line.

In February, the crew experimented with some solar powered lights. If the product works well enough, they will use them in some additional locations around the district.

The maintenance team wrapped up a renovation project at the field house this month. The project included new carpet, new paint and some new lighting in the film room and offices. The finished product looks awesome!

We know that the rainy season is on the way, so the team executed some major drainage work at the Nash Elementary playgrounds. Measures were put in place to redirect potential flood water into the proper locations and reduce washout. Good job guys!
