Re: Facilities Update

Daniel Wright Jr High

- As part of our building security enhancements, over Spring Break we had security film installed on the door glass at all of the entryways. This film is designed to keep the glass intact when it experiences extreme impacts, thus prolonging entry.
- A failed compressor for RTU 4 was replaced over Spring Break to ensure the unit will be able to provide adequate cooling for the upcoming spring and summer months. This compressor was ordered in September 2023, but lead times prolonged its replacement until last month. The unit is now up and running and fully functional.
- Insulation was installed on the ductwork in the science rooms to prevent condensation during the summer months. This project should improve the overall learning environments and comfort in these classrooms.
- The field has been painted for the track season and the long jump pit maintenance program has begun. The excessively rainy conditions have the field and pit areas retaining a bit of water but the warmer temps are helping dry things out.

Half Day School

- As part of our building security enhancements, over Spring Break we had security film installed on the door glass at all of the entryways. This film is designed to keep the glass intact when it experiences extreme impacts, thus prolonging entry.
- OpenPath entry readers were added to doors E, K, and J at Half Day School. The keypad entry devices at these entries had failed so this was a great opportunity for us to update the access control system and include these doors.
- The interior vestibule doors at the end of the 3rd grade hallway were replaced over Spring Break. This was a long term item from the Matrix that we were able to get completed as the old doors were heavily worn and in need of replacement.

- Dirt, grass seed, and haymat were applied to a heavily worn area of the playground. This worn area was causing a lot of mud to be tracked into the building causing potential damage to the carpets. While the field would benefit from drainage and turf program improvements, we hope that our efforts in regrowing the grass in these areas will buy us time until appropriate funding can be allocated to a project of this nature.

Laura Sprague

- As part of our building security enhancements, over Spring Break we had security film installed on the door glass at all of the entryways. This film is designed to keep the glass intact when it experiences extreme impacts, thus prolonging entry.
- The addition of two fire strobes was completed in the Library Office and the MDF room at Sprague. These additions bring us up to compliance standards with the Regional Office of Education. These devices were installed and tested over Spring Break.
