## Reading Series K-5

I have been looking at MAP scores to see the impact the new reading series has had on our MAP score. Kindergarten and 5th grade had the highest overall MAP scores in Reading. Kindergarten also had the most growth from Fall to Spring that they have had. The other grades saw better scores and growth in certain areas, but not overall.

Why did we not see better scores?

1. Our teacher did a fantastic job without having a reading series.
2. This series is a new way of teaching reading. It is very challenging.
3. Students didn't have this series in the lower grades, so they jumped in and didn't have the skills taught the way this series does it.
4. Other factors, for example, class size. 3rd grade had 25 or 26 students in each class, compared to 16 or 17 last year. This group came in lower than previous groups, because they have had a larger class size.

Moving forward:

1. Hopefully each year the students go through the series we will continue to see growth.
2. The teachers have requested more time on the Wednesdays to plan and work on the Reading Series.
3. Don't panic, it's 1 year.

My biggest concern is the achievement gap between the higher students and the lower students was wider this year.
