

Board Report for February 13, 2017

Maintenance:

Rocky has been relocating the data boxes in each room as construction is there. I am interviewing for a new custodian and hope to have that done soon. Janet has been filling in on the empty custodial spot until we hire one. My other custodians are working hard just trying to clean up after construction workers and trying to do their normal jobs. I had to adjust down the gas valve on three more units on the roof. We had a gas pressure problem at the fieldhouse/weight room/ag shop, it ended up being on the City side. The regulator and meter quit. It's fixed now and we are up and running. Rocky and I are working on putting the playground equipment back to gather.

Transportation:

Things are going okay. Had to replace a couple heater blower motors. I am going to replace one on Bus #54 soon. I had to change the inner filter and oil in the transmission on Bus #54 due to it wasn't shifting right and the light came on. It's working great now. Trying to catch the time and weather just right to wash and service some vehicles. I have done a couple of inspections and have two more that are due by the end of this month.
