AND The total number of COVID-19 Quarantine Completion Acknowledgement and Release Statements received by the District from those same individuals.

The purpose of this inquiry is to gather data as to the number of students in close contact quarantine* who develop symptoms and/or test positive for CoVid-19 during their 14-day quarantine period. This data is invaluable at the district, county, and state level for future development and implementation of informed best practices based on actual data. As such, alternatively, you may

• provide the total number or percentage of students in close contact quarantine* who develop symptoms and the total number of students in close contact quarantine* who test positive for CoVid-19 during their 14-day quarantine period should the district have collected and analyzed that data.

*close contact quarantine period being defined as the period of time a student has been required by the school to quarantine after being identified as a close contact to a CoVid positive case during in-person learning at school.”
