

## Kasaan Board Report for the month of February 2024.

Kasaan School has been doing a lot of fun activities this month. Kids are very excited to get out and enjoy the sun and nicer weather.

Elementary students are exploring the science of nature by planting seeds and experimenting with leftover food scraps from the kitchen. Students are taking seeds left from lunch food scraps and getting them to grow in our classroom propagation seed starter. Our middle school students have been also studying propagation of nonvascular, vascular and root systems by gathering tree cuttings and experimenting to start the cutting in water solution.

Due to the lack of nutrients in the soil on our Island, students are learning about the importance of composing scrap food, dead plant life, and using worms and other insects to break down food into usable good plant food.

One interesting and hard to see activity (for some of our students) this month was the dissection and processing of a sea seal. OVK invited our middle and high school students to participate in the processing of a sea seal.

In our elective classes, our students are completing their model shed and learning about all aspects of old and modern construction processes.

For Valentine's Day this year our students made some awesome, creative Valentine's boxes. Our students are very talented art students. I wish I could get them to enter some art shows.
