Technology Report

Jason with Region 5 helped us set up a new server. We had bought one to replace our older server, but it crashed before we could transfer everything. With our backups and his expertise, we restored and updated most of our files on the server.

We are almost complete with our new sound systems throughout the district. We have updated the Primary Cafeteria, JH and HS Gyms, baseball and softball press boxes, football field, and the Auditorium. Wave Computer also ran the conduit from the football field press box to the baseball/softball complex. They will be running fiber and network cables through it this month as well as a switch and data drops.

We continue to move some of our services to the cloud for several reasons such as: faster updating of software, less maintenance and upkeep on our servers, and more security and control of their systems. Last year we converted our intercom and bell schedule system (Telecenter) from one of our servers to the cloud. This summer we moved our in-house phone system to Windstream (WeConnect Office Suite) online system. We will be starting on converting our copier/printers to Canon's Uniflow Online.
